Weld®

Annual and Perennial Broadleaf Postemergence Control in Barley, Oats and Wheat Not Underseeded With a Legume

ACTIVE INGREDIENTS:
- MCPA-EHE: 2-methyl-4-chlorophenoxyacetic acid, 19.7%, 1.75 lb/gal
- Fluroxypyr: 1-methylheptyl ester, 53.30%
- Clopyralid: 3,6-dichloro-2-pyridinecarboxylic acid, 5.60%
- MCPA Acid
- Fluroxypyr 1-methylheptyl ester
- Clopyralid: 3,6-dichloro-2-pyridinecarboxylic acid
- MCPA-EHE: 2-methyl-4-chlorophenoxyacetic acid

Equivalent to:
- MCPA Acid: 19.7%, 1.75 lb/gal
- Fluroxypyr 1-methylheptyl ester
- MCPA-EHE: 2-methyl-4-chlorophenoxyacetic acid

OTHER INGREDIENTS:
- Contains petroleum distillates.

CONTAINER DISPOSAL:
- Nonrefillable Containers Larger than 5 Gallons: Nonrefillable container. Do not reuse or refill this container.
- MCPA has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Chloropropham is a chemical which can travel (seep or leach) through soil and under certain conditions contaminate groundwater which may be used for irrigation or drinking purposes. Users are advised not to apply chloropropham where soils have a rapid to very rapid permeability throughout the profile (such as loamy sand to sand) and the water table of an underlying aquifer is shallow, or to soils containing silt loams over limestone bedrock, severely fractured surfaces, and substrates which result in slow direct infiltration into an aquifer. Your local agricultural agencies can provide further information on the type of soil in your area and the location of groundwater.

SEE BOOKLET FOR ADDITIONAL PRECAUTIONARY STATEMENTS, COMPLETE DIRECTIONS FOR USE, WARRANTY DISCLAIMER AND LIMITATION OF LIABILITY.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Causes moderate eye irritation. Harmful if swallowed. Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

ENVIRONMENTAL HAZARDS

This product is toxic to fish, aquatic invertebrates and aquatic plants. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours.

CONTAINER DISPOSAL:
- Nonrefillable Containers Larger than 5 Gallons: Nonrefillable container. Do not reuse or refill this container.
- MCPA has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Users are advised not to apply chloropropham where soils have a rapid to very rapid permeability throughout the profile (such as loamy sand to sand) and the water table of an underlying aquifer is shallow, or to soils containing silt loams over limestone bedrock, severely fractured surfaces, and substrates which result in slow direct infiltration into an aquifer. Your local agricultural agencies can provide further information on the type of soil in your area and the location of groundwater.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store above 30°F or warm and agitate before use.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsewater is a violation of Federal law. If these wastes cannot be disposed of by user according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL:
- Nonrefillable Containers Larger than 5 Gallons: Nonrefillable container. Do not reuse or refill this container.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Causes moderate eye irritation. Harmful if swallowed. Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

All mixers, loaders, applicators, flaggers, and other handlers must wear:
- Long-sleeved shirt and long pants
- Shoes plus socks
- Chemical-resistant gloves when mixing, loading, or using any hand-held equipment
- Protective eyewear (goggles, face shield, or safety glasses)

See “Engineering Controls” for additional requirements.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Control Statement:

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(6)], the handler PPE may be reduced or modified as specified in the WPS. Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides [40 CFR 170.240(d)(6)].

USER SAFETY RECOMMENDATIONS

Users should:
- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. If pesticide gets on skin, wash immediately with soap and water.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product is toxic to fish, aquatic invertebrates and aquatic plants. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted to occur within 48 hours.

MCPA has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Clopyralid is a chemical which can travel (seep or leach) through soil and under certain conditions contaminate groundwater which may be used for irrigation or drinking purposes. Users are advised not to apply clopyralid where soils have a rapid to very rapid permeability throughout the profile (such as loamy sand to sand) and the water table of an underlying aquifer is shallow, or to soils containing sinkholes over limestone bedrock, severely fractured surfaces, and substrates which would allow direct introduction into an aquifer. Your local agricultural agencies can provide further information on the type of soil in your area and the location of groundwater.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area and the location of groundwater.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is coveralls, chemical-resistant gloves made of any waterproof material, shoes plus socks, and protective eyewear (goggles, face shield, or safety glasses).

USE PRECAUTIONS

- Use Restrictions in the State of New York: This product may not be sold or used in Suffolk and Nassau counties in the state of New York and can be used in other counties only for postemergence application with a maximum application rate of 15.9 fluid ounces (0.062 pound of clopyralid) per acre per year (with no other product containing clopyralid being applied pre-plant or post-plant within the same year).
- When applying this product, do not contaminate water used for domestic purposes or irrigation ditches.
- Do NOT apply this product through any type of irrigation system (i.e., chemigation).
- Do NOT apply this product to wheat, barley, or oat that has been underseeded with a legume.
- Do NOT allow spray drift to come in contact with or apply this product directly to susceptible broadleaf plants or broadleaf crops, including but not limited
Controlling Droplet Size

**Volume** – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.

**Pressure** – Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.

**Number of Nozzles** – Use the minimum number of nozzles that provide uniform coverage.

**Nozzle Orientation** – Orienting nozzles so that the spray is released backwards, parallel to the airstream will produce larger droplets than other orientations. Significant deflection from the horizontal will reduce droplet size and increase drift potential.
Due to the potential for crop injury, 18-month rotation intervals are recommended.

¹ Following application of this product, do not rotate to unlisted crops with less than a 10.5-month rotation interval. Prior to planting any broadleaf crops that are not listed above, perform a field bioassay (refer to the bioassay instructions below).

² Due to the potential for crop injury, 18-month rotation intervals are recommended. Note: For these crops, a minimum 10.5-month rotation interval must be observed to avoid illegal residues in the harvested crop.

³ Because these are sensitive crops, a field bioassay is recommended prior to planting (refer to the bioassay instructions below).

¹Following application of this product, do not rotate to unlisted crops with less than a 12-month rotation interval. Prior to planting any broadleaf crops that are not listed above, perform a field bioassay (refer to the bioassay instructions below).

²Due to the potential for crop injury, 18-month rotation intervals are recommended. Note: For these crops, a minimum 12-month rotation interval must be observed to avoid illegal residues in the harvested crop.

³Crop injury and/or yield loss may occur up to 4 years after application. Because these are sensitive crops, a field bioassay is recommended prior to planting (refer to the bioassay instructions below).

Instructions for Field Bioassays
In fields previously treated with this product, crop sensitivity can be confirmed by conducting a field bioassay using the following instructions:

1) Any time between harvest of the treated crop and the planting of the intended rotational crop, plant short test rows of the intended rotational crop so as to sample variability in field conditions such as soil texture, soil organic matter, soil pH, and/or drainage.

2) Observe the test crop for herbicidal activity, such as poor stand (effect on seed germination), chlorosis (yellowing), necrosis (dead leaves or shoots) or stunting (reduced growth).

The test crop can be grown only if herbicidal symptoms are not observed. If there is apparent herbicidal activity, do not plant the field to the test rotational crop. Only a labeled crop for which the rotational interval has clearly been met can be planted.

Sprayer Clean-Out
To avoid injury to desirable plants, before applying other chemicals with the equipment used to apply this product, all equipment must be thoroughly cleaned.

1. After applying this product, flush and rinse application equipment with water thoroughly at least 3 times. Rinse water may be disposed of by application to treatment areas or in non-crop areas away from water supplies.

2. For the second rinse, add 1 quart of household ammonia for every 25 gallons of water. Circulate the solution through the entire system so that all internal surfaces are exposed to the ammonia water solution (15 to 20 minutes). Let the solution stand in the equipment for several hours (preferably overnight).

3. Flush the solution out of the spray tank through the boom.

4. Rinse the system twice with clean water, recirculating and draining each time.

5. Remove and clean separately all nozzles and screens.

MIXING INSTRUCTIONS
Note: When adding ingredients to the mixture, allow time for each ingredient to be thoroughly mixed before adding the next. Be sure to agitate spray mixture before use if allowed to stand after mixing.

1. Fill spray tank with water equal to 1/2 to 3/4 of the required spray volume and start agitation.

2. Add the recommended amount of this product.

3. Add any surfactants, adjuvants or drift control agents according to the respective manufacturer’s instructions.

4. Agitate during final filling of the spray tank with water and maintain sufficient agitation during application to ensure uniformity of the spray mixture.

Tank Mixing
This product may be tank mixed with labeled rates of other products provided the tank mix partner products are labeled for the timing and method of application for the use site to be treated and tank mixing with products containing fluroxypyr or clopyralid is not prohibited by the label(s) of the tank mix partner products.

Tank Mixing Precautions
- Be sure to follow all applicable use directions, precautions, and limitations on the respective product labels.
- Do not exceed recommended application rates. Do not tank mix with other pesticide products that contain the same active ingredient as this product unless the label of either mix partner specifies the maximum dosages that may be applied.
- For products packaged in water soluble packaging, do not tank mix with products containing boron or mix in equipment previously used to apply a product mixture containing boron unless the spray tank has been adequately cleaned (refer to the“Sprayer Clean-Out” section above).
- Prior to final use, perform a (jar) test to verify the compatibility of tank mix partner products (see instructions below).
Tank Mix Compatibility Testing (Jar Test)
The following jar test is recommended prior to tank mixing to ensure the compatibility of this product with other tank mix partner products:

1. Mix the desired tank mix ingredients in their relative proportions in a clear glass quart jar with lid.
2. Invert the jar containing the mixture several times and observe the mixture for approximately 1/2 hour.
3. If the mixture balls-up, forms flakes, sedges, gels, oily films or layers, or other precipitates, it is not compatible and the tank mix combinations must not be used.

Tank Mixing Instructions
1. Fill spray tank with water to 1/2 to 3/4 of the required spray volume.
2. Start agitation and maintain agitation continuously during mixing, final filling and while applying.
3. Add different formulation types in the following order being sure to allow sufficient time for each product to completely mix and disperse after addition (Note: This product is an emulsifiable concentrate [EC] formulation):
   a) Dry flowables
   b) Wettable powders
   c) Aqueous suspensions
   d) Flowables or liquids
4. Maintain agitation and fill spray tank to 3/4 of total spray volume and then add this product and other emulsifiable concentrates and any solutions.
5. Finish filling the spray tank.
6. While spraying, the tank mix ingredients may settle out of suspension if agitation is stopped before the spray tank is empty. The settled materials must be resuspended before any spraying is resumed and a sparger agitator works particularly well in this situation. Settled material may be more difficult to resuspend than when originally mixed.

*Indicates Suppression Only – Suppression is a reduction in weed competition (reduction in population or vigor) as compared to untreated areas. The degree of weed control and duration of effect may vary with weed size, density, application rate, coverage, and growing conditions before, during and after treatment.

1 Apply up to 5-leaf stage of growth for best results.
2 Apply in the 1 to 4 whorl stage of growth for best results.
3 Apply in the 1- to 4-leaf stage of growth (before vining) for best results.
4 Includes herbicide resistant or tolerant biotypes. Apply when weeds are 1 to 4 inches tall for best results.
5 Apply at the 2- to 4-leaf stage of growth for best control or suppression.
6 Apply from rosette to bud (pre-flower) stage of growth for best control or suppression.

Perennial Weeds
This product controls initial top growth and inhibits regrowth during the season it is applied. It may also reduce shoot regrowth in the season following application when used at the higher rates listed in this label; however, due to variability of shoot regrowth from perennial root systems, plant response may be inconsistent.

Management of Kochia Biotypes
Research indicates many biotypes of kochia may occur within a single field and while kochia biotypes can vary in their susceptibility to this product, in general all biotypes less than 4 inches in height will be suppressed or controlled with 1 to 1.5 pints per acre of this product. A shift to more tolerant biotypes within a field may occur if this product is applied at rates lower than recommended.
Best Practices for Resistance Management
Extensive populations of dicamba-tolerant kochia have been identified in certain small grain and corn production regions (such as Chouteau, Fergus, Liberty, Toole, and Treasure counties in the state of Montana). For optimal control of dicamba-tolerant kochia in these counties, apply this product at the rate of 1.5 to 2 pints per acre. For improved control of dicamba-tolerant kochia, this product may be tank mixed with a reduced rate of fluroxypyr (refer to the section “For Improved Control of Dicamba-Tolerant Kochia” on this label).

To minimize selection pressure and preserve the utility of this product for control of dicamba-tolerant kochia biotypes, rotate this product with products that do not contain dicamba.

Application Timing
Only weeds that have emerged at the time of application will be controlled so be sure to apply to actively growing weeds. Weed control may be reduced and the risk of crop injury (at all stages of growth) may increase if extreme growing conditions (such as drought or near-freezing temperatures) occur prior to, at, or following application. Control may be decreased if target plant foliage is wet at the time of application. Applications of this product are rainfast within 6 hours after application.

Effect of Temperature on Herbicidal Activity
The herbicidal activity of this product is influenced by weather conditions; optimum herbicidal activity is between 55°F to 75°F and reduced efficacy occurring when temperatures are below 45°F or above 85°F. Weed control and crop tolerance may be reduced if frost occurs before or shortly after application (3 days).

Spray Coverage
Use sufficient spray volume to provide thorough coverage and a uniform spray pattern. For best results (and to minimize spray drift), apply in a spray volume of 10 gallons or more per acre and do not broadcast apply in less than 3 gallons of total spray volume per acre. Increase spray volume as weed density and vegetative canopy increase in order to obtain equivalent weed control.

Use only nozzle types and spray equipment designed for herbicide application. To reduce spray drift, be sure to follow the precautions under the heading, Avoiding Injury to Non-Target Plants.

Adjuvants
To achieve satisfactory weed control, this product does not usually require the use of an adjuvant. An adjuvant may, however, optimize herbicidal activity when applications are made at lower use rates, lower carrier volumes, under conditions of cool temperature, low relative humidity or drought, or to small, heavily pubescent kochia. When an adjuvant is to be used with this product, Winfield Solutions, LLC recommends the use of a Chemical Producers and Distributors Association certified adjuvant.

Use with Sprayable Liquid Fertilizer Solutions
This product is compatible with most non-pressurized liquid fertilizer solutions. However, prior to mixing, perform a compatibility test (jar test), especially when a new batch of fertilizer or pesticides is used, when the water source changes, or when tank mixture ingredients or concentrations are changed. Refer to the “Tank Mix Compatibility Testing” section above for specific instructions.

When mixing with a sprayable liquid fertilizer, using a compatibility aid may help obtain and maintain a uniform spray solution during mixing and application. For best results, do not exceed 50% liquid fertilizer of the total spray volume. Premix this product with water and add to the liquid fertilizer/water mixture while agitating contents of the spray tank. To compare with jar test agitation, the agitation in the spray tank must be vigorous. Apply the spray the same day it is prepared being sure to maintain continuous agitation.

NOTE: Leaf-burn or yellowing of crop foliage may occur when foliar-applied liquid fertilizers are used as a carrier.

WHEAT (INCLUDING DURUM), BARLEY, OATS

Application Restrictions
- Do NOT apply if the cereal crop is underseeded with a legume.
- Do NOT allow livestock to graze treated areas or harvest treated forage within 7 days of application.
- Do NOT apply more than 0.25 lb ae/A of fluroxypyr-containing products per growing season.
- Do NOT apply more than 0.12 lb/a/A of clopyralid-containing products per growing season.
- Do NOT apply more than 3.4 pts. or 0.75 lb ae/A of MCPA-containing products per growing season.
- Preharvest Interval: Do not apply closer than 14 days before cutting of hay or 40 days before harvesting of grain and straw.

Application Timing
To control listed broadleaf weeds, apply as a postemergence broadcast treatment to actively growing wheat, barley or oats from the 3-leaf stage up to and including flag leaf emergence (Zadoks scale 39). Because only weeds that have emerged at the time application will be controlled, be sure to apply when weeds are actively growing but before weeds are 4 inches tall or vining. Consult the “Broadleaf Weeds Controlled or Suppressed” section for additional information on weed sizes.

For perennial weeds (such as Canada thistle), apply when the majority of the basal leaves have emerged from the soil up to bud stage to obtain season-long control.

To suppress volunteer potatoes, apply before potato plants are 4 inches tall.

Broadcast Application Rates
For young, succulent growth of susceptible weed species less than 4 inches tall, apply 1 to 1.5 pints of this product per acre. Best control of kochia is achieved when kochia is at least 1 inch tall and not taller than 4 inches. For dicamba-resistant kochia and volunteer potatoes use 1.5 to 2 pints per acre. Tank mixes with additional herbicides may be necessary when controlling less sensitive species, some perennials, and under conditions where control is more difficult (plant stress conditions such as drought or extreme temperatures, dense weed stands and/or larger weeds).

For Improved Control of Dicamba-Tolerant Kochia
Mix 0.03 pound active ingredient fluroxypyr per acre with the recommended amount of this product.

Tank Mixtures for Wheat (including Durum), Barley, Oats
This product may be applied in tank mix combination with labeled rates of other products registered for postemergence application in wheat, barley, and oats. Be sure that you do not exceed recommended application rates and use only in accordance with the most restrictive precautions and limitations on the respective product labels when tank mixing. Refer to the “Tank Mixing Precautions” section under “Mixing Instructions” for additional information.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store above 10°F or warm and agitate before use.

PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by user according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL:
Nonrefillable Containers 5 Gallons or Less: Nonrefillable container. Do not reuse or refil this container. Triple rinse container (or equivalent) promptly after emptying. Double rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Nonrefillable Containers Larger than 5 Gallons: Nonrefillable container. Do not reuse or refil this container. Offer for recycling if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 30 psi for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Then offer for recycling, if available, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Refillable Container Larger than 5 Gallons: Refillable container. Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or a mix tank. Fill the container about 10% full with water and, if possible, spray all sides while adding water. If practical, agitate vigorously or recirculate water with the pump for two minutes. Pour or pump rinsate into application equipment or rinse collection system. Repeat this rinsing procedure two more times. Then offer for recycling, if available, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

WARRANTY DISCLAIMER

The directions for use of this product must be followed carefully. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, (1) THE GOODS DELIVERED TO YOU ARE FURNISHED "AS IS" BY MANUFACTURER OR SELLER AND (2) MANUFACTURER AND SELLER MAKE NO WARRANTIES, GUARANTEES, OR REPRESENTATIONS OF ANY KIND TO BUYER OR USER, EITHER EXPRESS OR IMPLIED, OR BY USAGE OF TRADE, STATUTORY OR OTHERWISE, WITH REGARD TO THE PRODUCT SOLD, INCLUDING, BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, USE, OR ELIGIBILITY OF THE PRODUCT FOR ANY PARTICULAR TRADE USAGE. UNINTENDED CONSEQUENCES, INCLUDING BUT NOT LIMITED TO INEFFICIVENESS, MAY RESULT BECAUSE OF SUCH FACTORS AS THE PRESENCE OR ABSENCE OF OTHER MATERIALS USED IN COMBINATION WITH THE GOODS, OR THE MANNER OF USE OR APPLICATION, INCLUDING WEATHER, ALL OF WHICH ARE BEYOND THE CONTROL OF MANUFACTURER OR SELLER AND ASSUMED BY BUYER OR USER. THIS WRITING CONTAINS ALL OF THE REPRESENTATIONS AND AGREEMENTS BETWEEN BUYER, MANUFACTURER AND SELLER, AND NO PERSON OR AGENT OF MANUFACTURER OR SELLER HAS ANY AUTHORITY TO MAKE ANY REPRESENTATION OR WARRANTY OR AGREEMENT RELATING IN ANY WAY TO THESE GOODS.

LIMITATION OF LIABILITY

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO EVENT SHALL MANUFACTURER OR SELLER BE LIABLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, OR FOR DAMAGES IN THE NATURE OF PENALTIES RELATING TO THE GOODS SOLD, INCLUDING USE, APPLICATION, HANDLING, AND DISPOSAL. MANUFACTURER OR SELLER SHALL NOT BE LIABLE TO BUYER OR USER BY WAY OF INDEMNIFICATION TO BUYER OR TO CUSTOMERS OF BUYER, IF ANY, OR FOR ANY DAMAGES OR SUITS OF MONEY, CLAIMS OR DEMANDS WHATSOEVER, RESULTING FROM OR BY REASON OF, OR ARISING OUT OF THE MISUSE, OR FAILURE TO FOLLOW LABEL WARNINGS OR INSTRUCTIONS FOR USE, OF THE GOODS SOLD BY MANUFACTURER OR SELLER TO BUYER. ALL SUCH RISKS SHALL BE ASSUMED BY THE BUYER, USER, OR ITS CUSTOMERS. BUYER’S OR USER’S EXCLUSIVE REMEDY, AND MANUFACTURER’S OR SELLER’S TOTAL LIABILITY SHALL BE FOR DAMAGES NOT EXCEEDING THE COST OF THE PRODUCT.

If you do not agree with or do not accept any of directions for use, the warranty disclaimers, or limitations on liability, do not use the product, and return it unopened to the Seller, and the purchase price will be refunded.

Annual and Perennial Broadleaf Postemergence Control In Barley, Oats and Wheat Not Underseeded With a Legume

ACTIVE INGREDIENTS:
- MCPA-EHE: 2-methyl-4-chlorophenoxyacetic acid, 2-ethylhexyl ester*................................. 30.73%
- Fluroxypyr 1-methylheptyl ester: ((4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy) acetic acid, 1-methylheptyl ester** ......... 10.37%
- Clopyralid: 3,6-dichloro-2-pyridinecarboxylic acid*** .................. 5.60%

OTHER INGREDIENTS .................................. 53.30%

TOTAL ........................................ 100.00%

Contains petroleum distillates.

Equivalent to:
- *MCPA Acid ........................................ 19.7%, 1.75 lb/gal
- **Fluroxypyr Acid .................................. 7.2%, 0.64 lb/gal
- ***Clopyralid Acid .................................. 5.6%, 0.50 lb/gal

KEEP OUT OF REACH OF CHILDREN

CAUTION

SEE BOOKLET FOR ADDITIONAL PRECAUTIONARY STATEMENTS, COMPLETE DIRECTIONS FOR USE, WARRANTY DISCLAIMER AND LIMITATION OF LIABILITY.

FIRST AID

IF SWALLOWED: Call a poison control center or doctor immediately for treatment advice. Do not induce vomiting unless told to by a poison control center or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of health emergency, call toll-free 1-877-424-7452.

NOTE TO PHYSICIAN: May pose aspiration pneumonia hazard. Contains petroleum distillate.
