Application Directions. For optimal disease control, begin applications of Endura prior to disease development and repeat on a 7- to 14-day interval if conditions are conducive for disease development.

Use the higher rate and shorter interval when disease pressure is high.

Resistance Management. To limit the potential for development of resistance, DO NOT make more than four (4) applications of Endura at the low rate or two (2) applications of Endura at the high rate per season. DO NOT make more than two (2) applications of Endura before alternating to a labeled fungicide with a different mode of action for at least one application.

Restrictions. DO NOT use on garden beets, sugar beets, radishes or turnips.
