<tr>
<td>Fairy Ring</td>
<td>0.55 - 1.1</td>
<td>The first application should be made in the spring when 5-day average daily soil temperatures taken at 2 inches are 55 – 65°F. In sandy soils, average air temperature can also be an adequate measure. The second application should be made 28 days later, and applications should be made in 2 gallons H2O/1000 ft². In addition, applications should be watered in with ¼ to ½ inch of irrigation. If possible, irrigation should be applied immediately. At the latest, irrigation should occur that night. CHIPCO TRITON® FLO applications that are not watered-in have resulted in unsatisfactory control.</td>
</tr>
</tbody>
</table>

*DO NOT apply more than 3.3 fl oz per 1,000 sq ft of CHIPCO TRITON® FLO per year.*
