HOW TO USE

Determine the amount of product needed according to chart on the following page. Pour the required amount into a bucket of water and empty the bucket around the base of the tree/shrub.

DO NOT allow this product to contact plants in bloom if bees are foraging in the treatment area.
### HOW MUCH TO APPLY

**Trees:** 1 ounce per inch of distance around trunk.

**Shrubs:** 3 ounces per foot of height.

| Tree with 1 trunk                                                                 | • Measure distance (in inches) around tree trunk at chest height (a flexible tape measure is recommended).
|                                                                                   | • This is the number of ounces of this product to apply.
|                                                                                   | • Do not apply more than 9.4 oz. a.i. Imidacloprid per 1,000 sq. ft. per year.

| Tree with 2 or more trunks                                                      | • Measure distance (in inches) around each tree trunk and add together.
|                                                                                   | • Multiply this total by 0.75 to get the required number of ounces of this product to apply.
|                                                                                   | • Do not apply more than 9.4 oz. a.i. Imidacloprid per 1,000 sq. ft. per year.
| Example: A tree has 4 trunks. They measure 20, 10, 5 and 5 inches or a total of 40 inches. 40 x 0.75 = 30 ounces. |

| Shrubs                                                                            | • Measure the height of the shrub to the nearest foot. Round any inches down to the nearest foot if less than 6” and up to the nearest foot if greater than 6”.
|                                                                                   | • Multiply the number of feet by 3. This will be the number of ounces of this product to apply.
|                                                                                   | • Do not apply more than 9.4 oz. a.i. Imidacloprid per 1,000 sq. ft. per year.
HOW TO APPLY

• Fill a bucket or watering can with 1 gallon of water. For large trees with circumference greater than 50 inches, use 2 gallons of water.
• Shake bottle well.
• Carefully measure required amount of product into bucket.
• Slowly pour the solution evenly around the tree. For best results, pour as close to the trunk/main stem of the tree/shrub as possible.
• Fill the bucket with clean water and pour it around the trunk as well.

For best results, use this product as part of an overall tree and shrub health care program before problems start. This product can be applied anytime except when the ground is waterlogged or frozen. These conditions inhibit the movement of the product down into the root zone. During prolonged dry periods, water the tree/shrub well the night before making an application.

For severe infestations, treat with a foliar insecticide such as Menace 2.4% ME, then use this product as part of routine care program.

The insecticide dissolved in water moves down through the soil, where it is absorbed by the roots. Once absorbed, it moves up through the tree or shrub providing year-long insect protection. This product even moves into new growth after application, thus protecting it, too! To get complete protection, the insecticide must distribute completely through the tree/shrub.

Depending on the size and health of the plant, this may take one week to three months (for very large trees). Rain or water cannot wash off this internal protection.

**NOTE:** Application to trees heavily infested may not prevent their eventual loss due to existing pest damage and tree stress.

Children and pets may re-enter the treated area after it has dried.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Keep out of reach of children and animals. Store in original container only. Store in a cool, dry place and avoid excess heat.

**PESTICIDE DISPOSAL AND CONTAINER DISPOSAL:** Nonrefillable container. Do not reuse or refill this container. **If empty:** Place in trash or offer for recycling if available. **If partly filled:** If product cannot be used as directed, call your local solid waste agency for disposal instructions. Never place unused product down any indoor (including toilet) or outdoor (including sewer) drain.
