For Control of: Ants, Cockroaches, Firebrats, Silverfish, Spiders, Mites, Bed Bugs, Lice, Fleas, Ticks, Stored Product/Pantry/Fabric/Clothes Beetles and Moths & Drywood Termites

PRECAUTIONARY STATEMENTS

Hazard to Humans and Domestic Animals: CAUTION: Causes moderate eye irritation. Avoid contact with eyes or clothing.

CAUTION: Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

First Aid: If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

First Aid: If on skin: Wash with soap and water. If skin irritation occurs: Get medical help.

First Aid: If swallowed: Do not induce vomiting. Drink 1 or 2 glasses of water. Get medical help.

Hazard to Domestic Animals: CAUTION: May cause death or serious injury to animals. Keep out of reach of children and pets. Do not expose animals to treated areas.

Hazard to Freshwater: CAUTION: Do not contaminate water, food, or feed by cleaning in dirty water.

Hazard to Aquatic Life: CAUTION: Keep away from ponds, streams, and other bodies of water.

Hazard to Plants: CAUTION: Do not contaminate water, food, or feed by cleaning in dirty water.

Poison: Harmful if swallowed, inhaled, or absorbed through the skin. Do not get in eyes, on skin, or on clothing. Wash thoroughly with soap and water if skin or clothing is contaminated. Do not reuse container. Call a poison control center or doctor for treatment advice.

Inhalation: CAUTION: Inhaling dust may cause respiratory irritation. Avoid direct contact with skin and clothing when handling dust. Wash thoroughly with soap and water if skin or clothing is contaminated.

Ingestion: CAUTION: Drinking or ingesting dust may cause systemic absorption. If swallowed, do not induce vomiting. Drink 1 or 2 glasses of water. Get medical help.

Skin: CAUTION: Do not get in eyes, on skin, or on clothing. Wash thoroughly with soap and water if skin or clothing is contaminated. Do not reuse contaminated container. Call a poison control center or doctor for treatment advice.

Eye: CAUTION: Causes severe eye irritation. Avoid contact with eyes or clothing. Wash thoroughly with soap and water if skin or clothing is contaminated. Do not reuse container. Call a poison control center or doctor for treatment advice.

Clean up spills immediately to minimize dust exposure.

KEEP OUT OF REACH OF CHILDREN

CAUTION: Causes moderate eye irritation. Avoid contact with eyes or clothing.

CAUTION: Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

First Aid: If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first five minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

Directions: For use site: Treat attics, crawl spaces, trash closets, utility closets, behind basboards, around the perimeter of dropped ceilings, in holes in furniture legs; under and behind bedding, appliances and vending machines; in wall voids and voids under and behind cabinets, sinks and tubs; in drawer wells, garbage chutes, pipe chases, weep holes in brick or siding, elevator pits, around drains, around electrical conduits and in cracks and crevices where insects may harbor. Focus application in areas where insects or their signs are seen.

Application tips for certain use sites follow:

1. In attics, be sure to get dust near the eave and vent pipes where insects often first enter, as well as around any pipes or potential access points between the attic and the main structure.

2. When treating cabinetary areas, if there is no gap between the lower cabinets and the kickplate, then small holes can be drilled to access the vents. The plates around pipes can also be pulled back to allow access to voids.

3. The bottom drawers in kitchen and bathroom cabinets can be removed and dust applied into drawer wells. Dust should not be left exposed when drawers are replaced.

4. Exposed ceiling fans may be used as access holes to voids.

5. If there are cracks between baseboards, cabinets, doorframes, hinges, counters or trim, and walls, these cracks can be lightly dusted with product. In practical, these areas can be sealed once insect problems have been eliminated, to help prevent future problems.

6. Insects need moisture, so kitchen and bath areas and areas immediately surrounding them, and any other damp areas should be carefully inspected and treated if necessary.

Bed Bug Treatment: Remove bedding and take the bed apart. Treat the interior framework, joints and cracks in the bed frame. Treat the mattress and box spring, paying particular attention to tufts, folds and edges, and the interior framework of the box spring. Remove wall-mounted head boards and treat the back side. Picture frame molds, hollow furniture legs, cracks and crevices, along baseboards, and any area with visible signs of infestation, including rugs and carpet. Treat upholstered furniture by removing or lifting (if possible) the cushions and treating the underside. Treat the interior framework, cracks and joints of the furniture, and the folds, tufts and edges of cushions and other upholstered areas. Do not treat toys and stuffed animals with product. Treat wall voids by removing electrical switch plate covers to allow access, but do not apply dust directly in electrical boxes. Apply about 1/4 oz of dust to each accessible void.
