RAMPAGE®

PELLETED BAIT

FOR INDOOR AND OUTDOOR USE

KILLS RATS, MICE & MEADOW VOLES®

Due to Stop Feed Action, Rats and Mice Typically Feed Less or Cease Feeding Altogether After Consuming a Lethal Dose

ACTIVE INGREDIENT:
Bromethalin (CAS #63333-35-7): 0.01%
OTHER INGREDIENTS†: 99.99%
†Contains Denatonium Benzoate  TOTAL 100.00%

KEEP OUT OF REACH OF CHILDREN

CAUTION

See back panels for First Aid, additional Precautionary Statements, and Directions for Use.

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.
**NOTE TO PHYSICIAN OR VETERINARIAN**
Contains the active ingredient bromethalin. This product is not an anticoagulant type rodenticide. For humans or animals ingesting bait and/or showing poisoning symptoms (such as muscle tremors, loss of hind limb use, or seizures for animals), allow administration of an osmotic diuretic and corticosteroid.

**IMPORTANT:**
Do not expose children, pets, or nontarget animals to rodenticides. To help prevent poison bait from being ingested by children or nontarget animals, it is strongly suggested that baits be placed in tamper-resistant bait stations.

**ENVIRONMENTAL HAZARDS**
Runoff also may be hazardous to aquatic organisms in water adjacent to treated areas. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff may also be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment or unneeded bait.

**STORAGE AND DISPOSAL**
Do not contaminate water, food or feed handling equipment, or milk or meat handling equipment or surfaces that come into direct contact with food. When used in USA inspected facilities, this product must be applied in tamper-resistant bait stations.

**USER SAFETY REQUIREMENTS**
Manufacturers of this product in California do not have the legal authority to require that tamper-resistant bait stations be used.

**DIRECTIONS FOR USE**
This product may only be used to control the following rodent pests in and around man-made structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys humulis), Golden mouse (Ochrotomys nuttalli), Polynesian rat (Rattus exulans), Meadow vole* (Microtus pennsylvanicus), White-throated woodrat* (Neotoma albigula), Southern plains woodrat* (Neotoma micropus), and Mexican woodrat* (Neotoma lepida). The product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commerical rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft, docks and ports and terminal buildings) and related structures around and associated with these sites. Force and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

**PRECAUTIONARY STATEMENTS**

**KEEP OUT OF REACH OF CHILDREN**
See sides panel for First Aid, additional Precautionary Statements, and Directions for Use.

**STORAGE AND DISPOSAL**
Do not contaminate water, food or feed handling equipment, or milk or meat handling equipment or surfaces that come into direct contact with food. When used in USA inspected facilities, this product must be applied in tamper-resistant bait stations.

**APPLICATION DIRECTIONS:**

The active ingredient in this product is different from anticoagulant rodenticides. Individual rats and mice typically feed less or cease feeding altogether after consuming a toxic dose. Bait stations are not effective for roaches, ants, or millipedes.

RATES: Apply 1 to 6 ounces of bait per placement (usually at intervals of 15 to 30 feet). Adjust the amount of bait applied to the level of rat feeding expected at each placement. For treating burrows, use a long-handled spoon to place 1 to 1½ ounces of bait deep into each active burrow entrance. Close burrows with soil 3 to 7 days after bait placement. Bait must be placed no less than 6 inches into active rat burrows. Do not broadcast bait. Because Norway rat infestations may occur in areas farther than 100 feet from buildings and man-made structures when the rodents have ample supplies of food or cover, efforts should be made to remove food trash, garbage, clutter, and debris.

**RAMPAGE Pellet Bait**
Bait can be applied to active rat burrows to control rats within 100 feet of buildings and man-made structures. Provided that infestations of these rodents have been confirmed, bait must be placed no less than 6 inches into active rat burrows. Do not broadcast bait. Because Norway rat infestations may occur in areas farther than 100 feet from buildings and man-made structures when the rodents have ample supplies of food or cover, efforts should be made to remove food trash, garbage, clutter, and debris.
