DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Road and understand the entire label before using. Use only according to label directions. Before buying or using this product, read Warranty Disclaimer statements found elsewhere on this label. Use of an unapproved package to sell for full refund of purchase price. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer.

Wood treated with this product will control and prevent infestation of destroying organisms including subterranean termites, drywood termites, wood destroying beetles, powderpost beetles, carpenter ants and decay fungi. It may also be used to resist wood rot, swellings, and checking due to its antiseptic properties, wood rot, mold and mildew, and moss. Cu-Nap Concentrate meets the AWPA* and cut requirements for exterior and ground contact field treatment (AWPA M4). Solutions of Cu-Nap Concentrate can be applied to wooded and cellulose utility and construction products (including lumber, end caps, timber, rail ties, posts, poles, freeways, fencing, aging, pier, steps, decks, boxes, tanks, and other housing cases). Cu-Nap Concentrate treated wood is suitable for ornamental and planting landscape timbers, wooden seeding trays, outdoor décor, flower boxes and window boxes. The treated wood can be top-coated with paint or stain.

Cu-Nap Concentrate must be diluted with a solvent such as mineral spirits, diesel fuel, and mineral oil. The solvent mix ratio is 1 volume of solvent to 1 volume of Cu-Nap Concentrate. Effective application rates vary according to severity of conditions to which the treated product is exposed but for guidance see the American Wood Protection Book of Standards for the applicable use category or commodity. Wood to be treated should be thoroughly seasoned and free of bark to maximize penetration.

Do not use Cu-Nap Concentrate treated wood for garden applications where fruit and vegetables will be grown. This product is not approved for application to other surfaces or structures intended for seating or heavy foot traffic. Do not apply at eaves or near water or wetlands. Wood treated with Cu-Nap Concentrate should not be used where it may come in contact with food, feed or potable water.

APPLICATION PROCEDURES:

Make sure wood is dry and free of dust, dirt and debris. Apply well before using. Wood must be thoroughly seasoned and free of bark. Allow at least 1 hour between applications. Make certain all areas are fully treated to get the maximum benefit. If appropriate, see applicable AWPA treatment methods.

WOOD TREATMENT; ABOVE GROUND CONTACT

FOR PRESSURE TREATMENT

Wood used in critical (structural) above-ground applications or that may be exposed to severe conditions such as extended periods of wetting, can be subjected to an extended soaking or pressure treatment with a solution containing 0.5% to 1.0% copper metal in a retention of the wood at 0.04 lb. per cu ft of 100% copper metal** in accordance with AWPA M4-99.

DIP, ROLLER, BRUSH OR COARSE SPRAY

Cu-Nap Concentrate solutions containing 10% copper metal are adequate for wood in non-critical applications. Mix a 1:3 or 1:4 dilution of solvent and Cu-Nap Concentrate to obtain 2% copper metal or 1+8 to 1+8 dilution of solvent and Cu-Nap Concentrate to obtain a 1% copper metal. Apply only by gravity feed spray, air pressure spray, or by fine mist. Coverage is dependent upon application method and the refractory nature of the wood being treated. One gallon of diluted Cu-Nap Concentrate will cover approximately 100-150 sq. ft. of surface area.

END CUT TREATMENTS

To satisfy AWPA M4, apply a 1% concentration of Cu-Nap Concentrate to cuts, holes, or injuries.

WOOD TREATMENT; GROUND CONTACT

DIP, ROLLER, BRUSH OR COARSE SPRAY

Treat with a solution containing 0.75% to 1.0% copper metal to a retention in the wood of 0.04 to 0.08 lbs copper metal** (in accordance with AWPA Standards). The application rate for wood treated with this product in a dip tank shall not exceed 25%. For PRESSURE TREATMENT

Treat with a solution containing 0.75% to 1.0% copper metal to a retention in the wood of 0.04 to 0.13 lbs. copper metal** (in accordance with AWPA Standards). For WOOD TREATMENT; REMEDIAL APPLICATIONS

A Cu-Nap Concentrate solution of 2% copper metal may be used for remedial treatment of standing wood poles, pilings and other structures in contact with ground water. IMPORTANT: This product will tint the wood. The color will fade over time. The wood can be stained or painted after 24 hours, or product re-applied at any time. The treated wood can be top-coated with paint or stain. Always test the product in an inconspicuous area for color satisfaction.

Warning Disclaimers

Manufacturer warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions thereon. To the extent not prohibited by law, Manufacturer makes no other express or implied warranty or merchantability, fitness for a particular purpose or any other express or implied warranty.

Inherent Risks of Use

The directions for use of this product are believed to be adequate and must be carefully followed. It is impossible to direct all risks associated with the use of this product. Lack of performance or other unintended consequences may result because of such factors as use of the product contrary to directions, improper application, abnormal conditions, the presence or other materials, climatic conditions or the manner of use/application, all of which are beyond the control of the Manufacturer. The buyer/user assumes all such risks.

User Safety Requirements

Follow manufacturer’s instructions for cleaning and maintaining PPE. If no such instructions exist, wash PPE separately from other laundry. Use:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide enters inside, then wash thoroughly and change close fitting clothing.

Environmental Hazards

This product is toxic to aquatic invertebrates, shrimp and oyster larvae. Do not discharge effluent containing this product to drains or sewers or to water bodies unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) or similar permit. Any person who has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your state water board or regional office of the EPA. Wood treated with this product shall not be used in the construction of beehives.

STORAGE AND DISPOSAL

For 5 gallon containers:

- Do not contaminate water, food or feed by disposal.

Pesticide Storage:

- Store in a cool, dry (preferably locked) storage inaccessible to children and pets. Do not freeze. Pesticide Disposal:

- Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Handling:

- Nonrefillable container, do not reseal or refill this container. Triple rinse (or equivalent) container promptly after emptying. Rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain 10 seconds after the flow begins to drip. Fill the container 1/4 full with solvent and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinsewater for later use or dispose. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times, then offer for recycling, if available, or reconditioning, if appropriate; or puncture and dispose of in a sanitary landfill, or by incineration.

For containers greater than 5 gallons:

- Do not contaminate water, food by feed or by disposal. Pesticide Storage:

- Store in a cool, dry (preferably locked) storage inaccessible to children and pets. Do not freeze. Pesticide Disposal:

- Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Handling:

- Nonrefillable container, do not reseal or refill this container. Triple rinse (or equivalent) container promptly after emptying. Rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with solvent. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank or store rinsewater for later use or disposal. Repeat this procedure two more times. Then offer for recycling, if available, or reconditioning, if appropriate; or puncture and dispose of in a sanitary landfill; or by incineration.

ACTIVE INGREDIENT:

Copper Napthenate ... (CAS No. 1338-02-9) ... 88% OTHER INGREDIENTS: ... 12%

TOTAL: ... 100%

*Equivalent to 6% Copper
