**FIRST AID (2.0)**

**If Swallowed**
Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

**If in Eyes**
Hold eye open and rinse slowly and gently with water for 15-20 minutes. Call a poison control center or doctor for further advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.

**If on Skin or Clothing**
Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

**If Inhaled**
Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

**HOTLINE NUMBER (3.0)**
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact FMC Corporation at 1-800-331-3148 for emergency medical treatment information.
Environmental Hazards
This pesticide is toxic to fish and marine/estuarine invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to terrestrial and aquatic plants in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsates.

Mixing/Loading Instructions
Care must be taken when using this product to prevent back-siphoning into wells, spills or improper disposal of excess pesticide, spray mixtures, or rinsates.

Check valves or antisiphoning devices must be used on all mixing and/or application equipment.

BROADAXE Herbicide may not be mixed or loaded within 50 feet of any wells (including abandoned wells and drainage wells), sinkholes, perennials or intermittent streams and rivers, and natural or impounded lakes and reservoirs. This setback does not apply to properly capped or plugged abandoned wells and does not apply to impervious pads or properly diked mixing/loading areas.

Operations that involve mixing, loading, rinsing, or washing of this product into or from pesticide handling or application equipment or containers within 50 feet of any well are prohibited unless conducted on an impervious pad constructed to withstand the weight of the heaviest load that may be positioned on or moved across the pad. Such a pad shall be designed and maintained to contain any product spills or equipment leaks, container or equipment rinse or wash water, and rainwater that may fall on the pad. Surface water shall not be allowed to either flow over or from the pad, which means the pad must be self-contained. The pad shall be sloped to facilitate material removal. An unroofed pad shall be of sufficient capacity to contain at a minimum 110% of the capacity of the largest pesticide container or application equipment on the pad. A pad that is covered by a roof of sufficient size to completely exclude precipitation from contact with the pad shall have a minimum containment capacity of 100% of the capacity of the largest pesticide container or application equipment on the pad. Containment capacities as described above shall be maintained at all times. The above specific minimum containment capacities do not apply to vehicles when delivering pesticide shipments to the mixing/loading site. States may have in effect additional requirements regarding wellhead setbacks and operational containment.

Product must be used in a manner that will prevent back-siphoning in wells, spills or improper disposal of excess pesticide, spray mixtures or rinsates.

Groundwater advisory: The active ingredients in this product are known to leach through soil into groundwater under certain conditions as a result of agricultural use. Use of this product in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Do not use on coarse soils classified as sand, which have less than 1% organic matter.

Surface water advisory: This product can contaminate surface water through spray drift. Under some conditions, this product may also have a high potential for runoff into surface water (primarily via dissolution in runoff water), for several to many months post-application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, overlying extremely shallow groundwater, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas overlying tile drainage systems that drain to surface waters.

Physical/Chemical Hazards
Do not use or store near heat or open flame.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the Agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS (5.0)
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. These requirements only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

Exception: if the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

Personal Protective Equipment (PPE) required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated. such as plants, soil, or water is: Coveralls over short-sleeve shirt and short pants, chemical-resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride, and chemical-resistant footwear plus socks.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage and disposal.

Pesticide Storage
Store product in original container only, away from other pesticides, fertilizer, food or feed. Do not use or store around the home.

Do not store below 32°F. Product that has been frozen should be thawed and recirculated prior to its use. Store in a cool, dry place and avoid excess heat.

In Case of Spill
In case of spill, avoid contact, isolate area and keep out animals and unprotected persons. Confine spills. Call CHEMTREC (Transportation and spills): (800) 424-9300.

To Confine Spill
To confine spill: If liquid, dike surrounding area or absorb with sand, cat litter or commercial clay. If dry material, cover to prevent dispersal. Place damaged package in a holding container. Identify contents.

Pesticide Disposal
Waste resulting from the use of this product must be disposed of at an approved waste disposal facility.

Container Disposal
Nonrefillable container: Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: (For containers greater than 5 gallons) Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank or store rinse for later use or disposal. Repeat this procedure two more times. (For containers 5 gallons or less) Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinse for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Triple rinse (or equivalent). Then offer for recycling if available, or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

Returnable/Refillable Containers - Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinse into application equipment or rinseate collection system. Repeat this rinsing procedure two more times. For final disposal, offer for recycling if available, or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.
CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY (6.0)

Notice: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product and no injury or effectiveness of the product may result because of such factors as manner of use or application, weather or crop conditions beyond the control or FMC or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold FMC and Seller harmless for any claims relating to such factors.

Seller warrants that this product conforms to the chemical description of the product and is reasonably fit for the uses stated on the Directions for Use when used in accordance with the directions under normal conditions of use. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, FMC MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE, NOR ANY OTHER EXPRESS OR IMPLIED WARRANTIES WITH RESPECT TO THE SELECTION, PURCHASE, OR USE OF THIS PRODUCT. Any warranties, express or implied, having been disclaimed, is Buyer’s sole remedy. Therefore buyer assumes the risk of any such use.

To the extent consistent with applicable law, FMC or seller must not be liable for any incidental, consequental or special damages resulting from the use or handling of this product. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER is TO BUYER, AT THE EXCLUSION OF THE EXCLUSIVE LIABILITY OF FMC AND SELLER FOR ANY AND ALL CLAIMS. LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF FMC OR SELLER, THE REPLACEMENT OF THE PRODUCT.

This Conditions of Sale and Limitation of Warranty and Liability may not be amended by any oral or written agreement.

RESISTANCE MANAGEMENT (7.0)

BROADAXE Herbicide provides two modes of action—Protoporpyrin Oxidase IX (PPO IX) and a long chain fatty-acid inhibitor. Some weeds are known to develop resistance to herbicides that have been used repeatedly. While the development of herbicide resistance is well understood, it is often difficult to predict. Therefore herbicides should be used in conjunction with the resistance management strategies in the area. Consult the local or State agricultural advisors for details.

Always apply this product at the listed rates and in accordance with the use directions. Do not use less than listed label rates alone or in tank mixtures. Do not use reduced rates of the tank mix partner. For optimum performance, scout fields carefully and begin applications when weeds are smaller rather than larger. If resistance is suspected, contact the local or State agricultural advisors.

PRODUCT INFORMATION (8.0)

BROADAXE Herbicide is a soil-applied herbicide for the control of susceptible broadleaf, grass and seed weeds.

If adequate moisture (1/2” to 1”) from rainfall or irrigation is not received within 7 to 10 days after the BROADAXE Herbicide treatment, a shallow incorporation (less than 2”), may be needed to obtain desired weed control.

When activating moisture is not received a planned post-emergence application of a labeled herbicide will be needed for optimum weed control. If an activating rainfall (1/2” to 1”) is not received BROADAXE Herbicide will provide a reduced level of control of susceptible germinating weeds.

Observe all instructions, crop restrictions, mixing directions, application precautions, replanting directions, rotational crop guidelines and other label information of each product when tank mixing with BROADAXE Herbicide. Tank mixtures are permitted only in those states where the tank mix partner is registered.

BROADAXE Herbicide can be mixed with water, liquid fertilizer, or mixtures of water and liquid fertilizer and applied as a preplant or preemergence treatment to labeled crops.

Under normal growing conditions, BROADAXE Herbicide exhibits excellent crop safety. Soil applications of BROADAXE Herbicide must be made before crop seed germination to prevent injury to the emerging crop seedlings. BROADAXE Herbicide applied after crop emergence may cause injury to the crop. Poor growing conditions, such as excessive soil moisture, cool temperatures, and soil compaction or the presence of various pathogens may impact seedling vigor. Under these conditions, the active ingredients in BROADAXE Herbicide can contribute to crop response. Refer to the specific directions of use for a particular crop/use pattern as set forth below for additional information.

Restrictions

Do not apply other products containing sulfonyluracil or s-metolachlor to the crop unless specified in the individual crop section.

Do not use in nurseries, turf or landscape plantings.

Mechanism of Action

Following the application of BROADAXE Herbicide to soil, germinating soybean or sorghum seedling contact with BROADAXE Herbicide from the soil solubilized. The amount of BROADAXE Herbicide in soil solution available for weed uptake is determined primarily by soil type, soil organic matter and soil pH. Similar to other herbicides, BROADAXE Herbicide adsorbs to the clay and organic matter (OM) fractions of soils; effectively limiting the amount of actively ionized herbicide available to control weeds.

Influence of soil type, organic matter and pH on BROADAXE Herbicide use rates and crop response

Coarse textured and high pH (>7.2) soils (see Table 1) will exhibit increased weed control and crop response with BROADAXE Herbicide. It is important to know the soil type and soil pH levels of the field (or area due in a field) before application to determine the proper rate of BROADAXE Herbicide for the crop. Soil organic matter content and soil pH can vary widely and independently of soil type and requires an accurate analysis of representative soil samples or grids of soil samples within a specific field to determine its content.

It is important to note that irrigation with high alkaline water (high pH) following a BROADAXE Herbicide soil application can also significantly increase the amount of BROADAXE Herbicide available in the soil solution. Irrigation with water having a pH greater than 7.2 could result in adverse crop response. This response will ultimately depend on initial BROADAXE Herbicide application rate, timing, amount and pH of irrigation water and sensitivity of the crop and it’s growth stage when irrigation initiated. The risk of adverse crop response will lessen with the advance in growth stage among most crops.

APPLICATION INFORMATION (9.0)

Ground and Aerial Application

Utilize a sprayer equipped with the appropriate nozzles providing optimum spray distribution and coverage at the appropriate operating pressures. Utilize nozzles that produce minimal amounts of fine spray droplets to avoid spray drift. Apply a minimum of 10 gallons of finished spray solution per acre by ground or 5 gallons by air. The sprayer should be properly calibrated to deliver the appropriate volume of herbicide solution. Be aware that overlaps and slower ground speeds while starting, stopping or turning while spraying may result in excessive applications and subsequent crop response.

Restrictions

Do not apply when wind speed favors drift beyond the area intended for treatment. Do not apply under conditions which favor runoff or wind erosion of soil containing this product to non-target areas. To prevent off-site movement due to runoff or wind erosion:

1. Avoid treating powdery dry or light sand soils when conditions are favorable for wind erosion. Under these conditions, the soil surface should first be settled by rainfall or irrigation.

2. Do not apply to impervious substrates, such as paved or highly compacted surfaces.

3. Do not use tailwater from the first flood or furrow irrigation of treated fields to treat non-target crops, unless at least ½ inch of rainfall has occurred between application and the first irrigation.

Chemigation Application

Apply BROADAXE Herbicide at a rate of 25 to 1 inch of water. Use the lower water volume on coarse textured soil and higher volume on fine textured soils. Applying >1” of irrigation water may result in reduced weed control by moving the product below the weed germination zone in the soil. Adapt chemigation application rates specified for the individual crop from the chemical application chart. BROADAXE Herbicide may be applied through sprinkler irrigation systems including center pivot, lateral move, end tow, solid set, or hand move irrigation systems. Crop injury, lack of effectiveness, or illegal residues on or in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to...
prevent water source contamination from backflow. The pesticide injection pipeline must also contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, check- operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlock controls to automatically shut off the injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide dispersion is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

**BROADAXE Herbicide** should be metered into the irrigation system continuously for the duration of the water application. BROADAXE Herbicide should be diluted in sufficient volume to insure accurate application over the area to be treated. Use the appropriate amount of water to carry the product to the soil surface. Continuous agitation is required to maintain product suspension in the solution tank. A jar test should be conducted to ensure that phase separation would not occur during dilution and application. Failure to achieve a uniform dilution throughout the time of application may result in undesirable residues or less than desirable weed control. Flush the lines at the completion of the application and then turn the water off promptly.

When using water from public water systems; **DO NOT APPLY BROADAXE Herbicide THROUGH ANY IRRIGATION SYSTEM PHYSICALLY CONNECTED TO A PUBLIC WATER SYSTEM.** Public water systems means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days of the year. BROADAXE Herbicide may be supplied through irrigation systems, which may be supplied by a public water system only if water from the water system is discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and to top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. Before beginning chemigation, always make sure that the air gap exists and that there is no blockage of the overflow of the reservoir tank.

It is important to note that irrigation with highly alkaline water (high pH) following a BROADAXE Herbicide soil application may significantly increase the amount of sulfentrazone available in soil solution. Irrigation with water having a pH greater than 7.2 could result in adverse crop response.

**Restrictions**

Do not apply this product through any other type of irrigation system.

**Application with Liquid Fertilizer**

BROADAXE Herbicide may be applied using liquid fertilizer and water as the carrier. Adequate soil coverage is essential to achieve acceptable levels of weed control.

Herbicide mixing, solution stability and/or compatibility problems may occur when liquid fertilizers are used as a carrier. Compatibility tests must be conducted prior to mixing to insure tank mixture compatibility and stability. The use of compatibility agents may be beneficial to achieve and maintain a homogenous solution.

**Mixing Instructions for Liquid Fertilizer Applications**

Fill the clean spray tank to one half of the total volume with the fertilizer solution. Start the spray tank agitation system. Pre slurry BROADAXE Herbicide in the spray tank in a manner that will provide uniform concentration. Carefully rinse the empty container, adding the rinsate to the spray tank.

Complete filling the spray tank to the desired level. Sufficient and continuous spray tank agitation is required at all times to maintain a homogenous spray solution. The spray system must be designed such that there is not the potential to uniformly agitate the spray tank. Systems may be required to maintain adequate tank agitation. Some systems may require separate pumps to simultaneously supply the spray system and the spray tank agitation system. Insure the BROADAXE Herbicide slurry is thoroughly mixed before water prior to addition to the spray tank. Carefully rinse the empty container, adding the rinsate to the spray tank.

For tank mixtures with other herbicide(s), a compatibility test must be conducted to insure product compatibility before mixing. Read and follow all the directions, precautions and restrictions of the tank mixture product prior to mixing.

Apply the BROADAXE Herbicide spray mixture immediately after mixing. It is not recommended to store the mixture longer than 10 days. The mixture must be applied within the extended period of time with the BROADAXE Herbicide spray mixture remaining in the tank. Thoroughly re-agitate spray mixture if product is left sitting in the tank for extended period of time.

If BROADAXE Herbicide is mixed and loaded in nurse tanks, thorough agitation of the mixture may be required prior to off-loading and application. Follow all BROADAXE Herbicide label directions regarding product use rates per acre, registered crops, application instructions, incorporation directions, special instructions and all precautions.

All individual state regulations relating to liquid fertilizer blending, storage, transportation, registration, labeling, and application are the responsibility of the individual and/or company preparing, selling or applying the BROADAXE Herbicide and fertilizer mixture.

**SPRAY DRIFT MANAGEMENT (10.0)**

**AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR**

The interaction of many equipment and weather related factors determines the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses, or to applications using dry formulations.

- The distance of the outermost nozzles on the boom must not exceed ¾ the length of the wingspan or rotor.
- Nozzles must always point backward parallel with the air stream and never be pointed downward more than 45 degrees.
- When states have more stringent regulations, they must be followed.

**Information on Droplet Size**

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage for pesticide performance. Applying larger droplets reduces drift potential but will not prevent drift if applications are made improperly or under unfavorable environmental conditions. (See information on Wind, Temperature and Humidity, and Temperature Inversions in subsequent sections).

**Volume**

- Nozzles with higher rated flow generally produce larger droplets.

**Pressure**

- When higher flow rates are needed, use higher flow rate nozzles rather than increasing spray pressure. Avoid spray pressures >40 psi orifice. If necessary, use smaller orifice diameter nozzles.

**Booth Length**

- For small use patterns, reducing the effective boom length to less than ¾ of the wingspan or rotor length may further reduce drift without reducing swath width.

**Application Height**

- Aerial applications should not be made at a height greater than 10 feet above the top of the target plant canopy unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

**Swath Adjustment**

- When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

**Wind**

- Drift potential is lowest between wind speeds of 3-10 mph. However, many factors, including droplet size and application type determine drift potential at any given wind speed. Application should be avoided below 3 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they may potentially affect spray drift.

**Temperature and Humidity**

- When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

**Temperature Inversions**

- Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small-suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the low speed and variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common during conditions of limited cloud cover and little to no wind. They begin to form the plant canopy and often continue through the night. Their presence can be observed.

**Sensible Heat –**

- The pesticide should only be applied when the wind is blowing away from sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target
crops). To assure that spray will not adversely affect adjacent sensitive non-target plants, apply BROADAXE Herbicide by aircraft at a minimum upwind distance of 400 ft. from sensitive plants. Avoid application to humans or animals. Flagmen and loaders should avoid inhalation of spray mist and prolonged contact with skin.

Off-Target Movement of BROADAXE Herbicide
Drift of dilute spray mixtures containing BROADAXE must be prevented. Observation of the environmental conditions, correct application equipment design, calibration and application practices will reduce the risk of off-target spray drift. BROADAXE can cause damage by drift on to sensitive crops and other plants. This symptomology may manifest initially as discreet, localized spots where contacted by BROADAXE drift mixtures. Depending on sensitivity of the plants, the concentration of the spray solution and droplets size these spots or lesions may or may not coalesce. These effects will usually not have lasting effects on plant growth, but can reduce the value of affected fruit or foliage where grade or quality is associated with appearance. In drift instances with sensitive crops, defoliation of affected foliage could result.

MAXIMUM ALLOWABLE BROADAXE Herbicide (11.0)

USE PER ACRE PER 12 MONTH CROPPING YEAR PERIOD

The total allowed usage includes all applications made to the field per twelve-month cropping year. This includes all pre plant and after plant pre emergence treatments. 

RESTRICTION: Do not exceed maximum allowed use rate of sulflentrazone or s-metolachlor on each crop. Refer to the crop section of this label for specific product use directions.

MAXIMUM ALLOWABLE BROADAXE Herbicide (11.0)

USE PER ACRE PER 12 MONTH CROPPING YEAR PERIOD

The total allowed usage includes all applications made to the field per twelve-month cropping year. This includes all pre plant and after plant pre emergence treatments. 

RESTRICTION: Do not exceed maximum allowed use rate of sulflentrazone or s-metolachlor on each crop. Refer to the crop section of this label for specific product use directions.

CROP ROTATIONAL RESTRICTIONS (12.0)
The following Table 3 shows the minimum interval in months from the time of the last BROADAXE Herbicide application until BROADAXE Herbicide treated soil can be replanted to the crops listed. When BROADAXE Herbicide is tank mixed with another herbicide, refer to the partner label for re-cropping instructions, following the directions that are most restrictive.

Some crops have rotational intervals greater than 12 months after a BROADAXE Herbicide application due to potential crop injury. A representative bioassay of the field shall be completed with the rotational crop to accurately determine the planned crop’s sensitivity to BROADAXE Herbicide.

RESTRICTION: Do not rotate to food or feed crops other than those listed on the label.

*To avoid injury to rotational alfalfa, (1) Do not apply more than 1.9 lb ai s-metolachlor per acre in the previous crop, and (2) Do not make lay-by or other postemergent applications of products containing s-metolachlor in the previous crop.

** Cotton may be planted after 12 months where BROADAXE Herbicide was applied at rates 36 oz/acre or less and meets the following conditions:
- *Medium and fine soils*
- *PH <7.2*
- *Rainfall or irrigation must exceed 15" after application of BROADAXE Herbicide to rotate to cotton*

For all other crops not listed, the rotation interval is a minimum of 12 months with a representative bioassay to determine crop safety before planting.

REPLANTING INSTRUCTIONS (13.0)

If initial planting of labeled crops fails to produce a stand, only crops labeled for BROADAXE Herbicide or the tank mix partner; whichever is most restrictive, may be planted based on the amount of product initially applied. When replanting use minimum soil tillage to preserve the herbicide barrier and achieve maximum weed control.

RESTRICTIONS: Do not retreat field with BROADAXE Herbicide or other herbicide containing sulflentrazone and s-metolachlor. Do not plant treated fields to any crop at intervals that are inconsistent with the Rotational Crop Guidelines on this label.

BAND TREATMENT APPLICATIONS (14.0)
For band treatments, apply the broadcast equivalent rate and volume per acre. To determine these:

</table>

MIXING AND LOADING INSTRUCTIONS (15.0)

BROADAXE Herbicide may be applied alone, or in tank mixtures with other labeled herbicides for the control of additional weed species. Mixtures with some other pesticides have not been tested. Conduct appropriate compatibility tests prior to tank mixing with other pesticides. Follow all precautions and restrictions on the tank mix partner label.

It is important that spray equipment is clean and free of existing pesticide residues before preparing BROADAXE Herbicide spray mixtures. For all tanks containing spray solution follow the tank clean out procedures specified on the label of the product or products previously applied.

For best results fill spray tank with one half of the volume of clean water needed for the field to be treated. Start agitation system. Slowly add the BROADAXE Herbicide to the spray tank. Carefully rinse the empty container, adding the rinsate to the spray tank. Complete filling the spray tank to the desired level. Continuous spray tank agitation is required at all times to maintain a uniform spray solution. Make sure BROADAXE Herbicide is thoroughly mixed before application.

Use the BROADAXE Herbicide spray mixture immediately after mixing. Avoid storing the sprayer overnight or for any extended period of time with the BROADAXE Herbicide spray mixture remaining in the tank.

If BROADAXE Herbicide is tank mixed with other labeled herbicides, all additional directions, restrictions and precautions for the tank mixture herbicides must be followed.

SPRAYER EQUIPMENT CLEAN-OUT (16.0)

As soon as possible after spraying BROADAXE Herbicide and before using sprayer equipment for any other applications, the sprayer must be thoroughly cleaned to avoid potential crop affects using the following procedure. Residues left in mixing equipment, spray tanks, hoses, spray booms and nozzles can cause crop effects if they are not properly cleaned. In addition, users must take appropriate steps to ensure proper equipment clean-out for any other products mixed with BROADAXE Herbicide as required on the other product labels. More complete cleaning can be achieved if the spray system is cleaned immediately following the application.

1. Drain sprayer tank, hoses, spray boom and spray nozzles. Use a high-pressure detergent wash to remove physical sediment and residues from the inside of the sprayer tank and thoroughly rinse. Then, thoroughly flush sprayer hoses, spray boom and spray nozzles with a clean water rinse. Remove and clean spray tips and all filters and screens (tank, spray hose and spray tip) separately in the ammonia solution of Step 2.

2. Next, prepare a sprayer cleaning solution by adding three gallons of ammonia (containing at least 3% active) per 100 gallons of clean water. Prepare sufficient cleaning solution to allow the operation of the spray system for a minimum of 15 minutes to thoroughly flush hoses, spray boom and spray nozzles.

3. Convenient and thorough cleaning of the sprayer can be achieved if the ammonia solution or fresh water is left in the spray tank, hoses, spray booms and spray nozzles overnight or during storage.

4. Before using the sprayer, completely drain the sprayer system. Rinse the tank with clean water and flush through the hoses, spray boom, and spray nozzles with clean spray tip and all filters and screens (tank, spray hose and spray tip) separately in an ammonia solution.

5. Properly dispose of all cleaning solution and rinsate in accordance with Federal, State, and local regulations and guidelines.

Do not apply sprayer cleaning solutions or rinsate to sensitive crops. Do not store the sprayer overnight or for any extended period of time with BROADAXE Herbicide solution remaining in the tank, spray lines, spray boom plumbing, spray nozzles or strainers.

If the sprayer has been stored or idle, purge the spray boom and nozzles with clean water before beginning any application.
Should small quantities of BROADAXE Herbicide remain in inadequately cleaned mixing, loading and/or spray equipment, they may be released during subsequent applications potentially causing effects to certain crops and other vegetation. FMC accepts no liability for any effects due to inadequately cleaned equipment. Do not drain of flush equipment on or near desirable trees or plants. Do not contaminate any body of water including irrigation water that may be used on other crops.

**SUNFLOWERS (17.0)**

Table 4:

<table>
<thead>
<tr>
<th>BROADAXE Herbicide Use Rate (Sunflowers)</th>
<th>Preemergence and Preplant Incorporated Applications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Broadcast Rate</td>
<td>% Organic Matter</td>
</tr>
<tr>
<td>BROADAXE Herbicide per acre</td>
<td>&lt;1.5</td>
</tr>
<tr>
<td></td>
<td>1.5-3.0</td>
</tr>
<tr>
<td></td>
<td>&gt;3</td>
</tr>
</tbody>
</table>

Refer to the previous information on soil types under the COARSE, MEDIUM, and FINE categories

For soils with pH >7.2 use the lowest rate for that specific soil texture and organic matter.

**Weeds Controlled (17.1)**

When applied according to directions in sunflower, BROADAXE Herbicide will provide control of:

<table>
<thead>
<tr>
<th>Species</th>
<th>% Organic Matter</th>
<th>Coarse</th>
<th>Medium</th>
<th>Fine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amaranth, Palmer</td>
<td>Thistle, Russian</td>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pigweed, smooth</td>
<td>Witch grass</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: Partial control will occur under dry conditions, under heavy pest pressure or at low use rates under 25 fl oz. Under these conditions plan to use a labeled post-emergence herbicide for improved control.

**Preemergence (Spring Applications)**

BROADAXE Herbicide can be applied preemergence up to 3 days after planting as a soil surface application if seedlings have not broken the soil surface and if the seed furrow is completely closed and completely covered with soil. Adequate moisture (1/2" to 1") is required for herbicide activation from rainfall or irrigation. If adequate moisture is not received within 7 to 10 days after the BROADAXE Herbicide treatment, a shallow incorporation may (less than 2 inches) be needed to obtain desired weed control. When activating moisture is not received a planned post-emergence application of a labeled herbicide will be needed for optimum weed control. If an activating rainfall (1/2" to 1") is not received BROADAXE Herbicide will provide a reduced and inconsistent level of control of susceptible emerging weeds. If dry conditions persist, weed control may be reduced. If applying on coarse soils with less than 1.5% organic matter, wait a minimum of 7 days after application before planting.

If weeds are emerged at the time of BROADAXE Herbicide application, use a labeled burndown herbicide such as Aim herbicide, glyphosate or paraquat at the full-labeled rate in combination with BROADAXE Herbicide as needed.

**Spring Preplant Incorporated (PPI)**

When planting into soil treated preplant with BROADAXE Herbicide minimize soil disturbance to maintain the herbicide barrier on the soil surface to achieve maximum weed control. BROADAXE Herbicide can be applied as a Preplant Incorporated treatment in the spring up to 2 weeks prior to planting in reduced and conventional tillage sunflowers. BROADAXE Herbicide should be shallowly incorporated in the soil no deeper than 2 inches. Incorporating BROADAXE Herbicide deeper than 2 inches can result in inconsistent weed control. Use the appropriate rate from Table 5 above for the soil texture, soil organic matter, and soil pH level.

**Precautions**

- Sunflowers should not be planted 1.5" deep and completely cover with soil.
- Adverse crop response may occur on coarse textured soils with low organic matter (less than 1.5%) and pH of 7.2 or higher, or on heavy or eroded soils, hillyflops, or in areas of excessive waterlogging. BROADAXE Herbicide use rates should be reduced to 19 fl oz in those areas or not applied in these areas at all. Inadequate seed furrow closure or shallow planting (less than 1.5 inch) may result in undesirable crop response and this product should not be applied. Poor growing conditions such as excessive moisture, low temperatures, soil compaction and diseases may also cause undesirable crop responses.

**Restrictions**

- Do not use more than 38.7 fl oz of BROADAXE Herbicide per crop row.
- Do not use BROADAXE Herbicide on or near desirable trees or plants.
- Do not use BROADAXE Herbicide containing sulfentrazone to sunflowers if BROADAXE Herbicide has been previously applied within the same twelve month period.
- Do not apply BROADAXE Herbicide to frozen soils or existing snow cover to prevent BROADAXE Herbicide runoff from rain or snowmelt that may occur following application.
- Do not allow livestock to graze or feed in treated area.
- Do not apply after crop seed germination.
- Do not use on soils classified as sand, which have less than 1% organic matter.

**DRIY SHELLED PEAS (18.0)**

Blackeyed pea, cowpea, crown-pea, southern pea, pea (Pisum) (includes field pea and chickpea) and pigeon pea.

Table 5:

<table>
<thead>
<tr>
<th>BROADAXE Herbicide Use Rate (Dry Shelled Peas)</th>
<th>Fall or Spring Early Preplant, Preemergence, and Preplant Incorporated Applications</th>
</tr>
</thead>
<tbody>
<tr>

<td>&lt;1.5</td>
</tr>
<tr>
<td></td>
<td>1.5-3.0</td>
</tr>
<tr>
<td></td>
<td>&gt;3</td>
</tr>
</tbody>
</table>

Refer to the previous information on soil types under the COARSE, MEDIUM, and FINE categories

For soils with pH >7.2 use the lowest rate for that specific soil texture and organic matter.

**Weeds Controlled**

The following is a general list of weeds for which BROADAXE has shown control or suppression. The level of control will vary per use rate, cropping system, environmental conditions, moisture levels and soil type. BROADAXE Herbicide may not control all of the weeds listed under all crop conditions. For crops where lower use rates are needed for crop tolerance refer to their specific weed list.

</tr>
<tr>
<td>Pigweed, smooth</td>
<td>Witch grass</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note: Partial control will occur under dry conditions, under heavy pest pressure or at low use rates under 26 fl oz. Under these conditions plan to use a labeled post-emergence herbicide for improved control.

**FALL APPLICATION**

BROADAXE Herbicide may be applied in the fall following crop harvest or in existing fallow fields to control or suppress weeds the following growing season. BROADAXE Herbicide should be applied to the harvested crop stubble or soil surface without incorporation. Moisture in the form of rain or snow will move and activate the product. Do not mechanically incorporate the fall or spring after application because this activity may desensitize the herbicide barrier and weed escapes can occur. Do not apply to frozen soils to prevent BROADAXE Herbicide runoff from rain or snow that may occur following application. BROADAXE Herbicide may be tank mixed with other labeled herbicides to control emerged weeds. When activating moisture is not received a planned post-emergence application of a labeled herbicide will be needed for optimum weed control. If an activating rainfall (1/2" to 1") is not received BROADAXE Herbicide will provide a reduced and inconsistent level of control of susceptible emerging weeds. If dry conditions persist, weed control may be reduced. Application of BROADAXE Herbicide may require a follow up grass herbicide treatment as grass escapes may occur.

BROADAXE should be applied when the sustained soil temperature is 55°F and falling at a soil depth of 4 inches. Applications to ridge till production systems must be made after the formation of ridges or banded.

For Fall Application

- Apply after September 30 in ND, SD, MN and WI, and north of Route 30 in IA.
- Apply after October 15 north of Route 91 in NE and south of Route...
30 in IA.

- Apply after October 31 north of Route 136 in IL.

BROADAXE Herbicide can be tank mixed with other labeled herbicides. Observe all restrictions, precautions, instructions, and rotational cropping guidelines of each product’s label when tank mixing, including all references to potential carryover and crop injury warnings or restrictions.

**Early Preplant and Preemergence (Spring Applications)**

BROADAXE Herbicide can be applied early preplant or preemergence up to 3 days after planting if seedlings have not broken the soil surface and if the seed furrow is completely closed and completely covered with soil. Adequate moisture (1/2” to 1”) is required for herbicide activation from rainfall. If adequate moisture is not received within 7 to 10 days after the BROADAXE Herbicide treatment, a shallow incorporation (less than 3 inches) may be needed to obtain desired weed control. When activating moisture is not received a planned post-emergence application of a labeled herbicide will be needed for optimum weed control. If an activating rainfall (½” to 1.0”) is not received BROADAXE Herbicide will provide a reduced and inconsistent level of control of susceptible germinating weeds. If dry conditions persist, weed control may be reduced.

If weeds are emerged at the time of BROADAXE Herbicide application, use a burndown herbicide such as A&M herbicide, glyphosate or paraquat at the full-labeled rate in combination with BROADAXE Herbicide as needed.

**Preplant Incorporated (PPI)**

BROADAXE Herbicide can be applied as a Preplant Incorporated treatment in the spring prior to planting in reduced and conventional tillage dry peas. BROADAXE Herbicide should be shallowly incorporated in the soil no deeper than 2 inches. Incorporating BROADAXE Herbicide deeper than 2 inches can result in inconsistent weed control. Minimize furrow and ridge formation in the tillage operations. Use the appropriate rate from Table 6 above for the soil texture, soil organic matter, and soil pH level.

**Precautions**

- Under extended periods of dry weather, adequate weed control may not be achieved. Adequate moisture (½” to 1”) is required for herbicide activation from rainfall. If adequate moisture is not received within 7 to 10 days after the BROADAXE Herbicide treatment, a shallow incorporation may be needed to obtain desired weed control. When activating moisture is not received a planned post-emergence application of a labeled herbicide will be needed for optimum weed control. If an activating rainfall (½” to 1”) is not received BROADAXE Herbicide will provide a reduced and inconsistent level of control of susceptible germinating weeds. If dry conditions persist, weed control may be reduced.

- DO NOT use on coarse textured soils with low organic matter (less than 1.5%) and pH of 7.2 or higher, or on highly eroded soils, hilltops, or in areas of calcareous outcroppings. BROADAXE Herbicide use rates should be reduced to 19 fl oz in those areas or not applied in these areas at all. Inadequate seed furrow closure or shallow planting (less than 1.5 inch) may result in undesirable crop response and this product should not be applied. Poor growing conditions such as excessive moisture, low temperatures, soil compaction and diseases may also cause undesirable crop response.

These Crop Specific Use directions are based upon the interactive effects of BROADAXE Herbicide and the primary soil and environmental factors, which affect its activity on various weed species and tolerance among crops. The user is required to observe the instructions and guidance previously presented under Product Application Instructions, BROADAXE Herbicide Product Use Rates, Rotational Crop Guidelines, Replanting Instructions, Weed Controlled, Crop Liability Disclaimer and any other section of this label pertinent to the anticipated crop use. It is important to note that not all varieties or cultivars of a given crop species have been evaluated under treatment with BROADAXE Herbicide. Consult seed companies and university or extension weed management personnel for additional information on specific local varieties or cultivars and any other pertinent information on BROADAXE Herbicide under specific local conditions.

**Restrictions**

- Do not apply more than 38.7 fl oz of BROADAXE Herbicide per crop year.
- Do not apply additional sulfentrazone containing products to dry peas if BROADAXE Herbicide has been previously applied within the same twelve month period.
- Do not apply after crop emerges, or if the seedling is close to the soil surface.
- Do not incorporate to depths greater than 2 inches.
- Do not apply to frozen soils or to existing snow cover to prevent BROADAXE Herbicide runoff from rain or snow melt that may occur following application.
- Do not use on soils classified as sand, which have less than 1% organic matter.
- Do not use for forage within 60 days after an application of BROADAXE Herbicide.
- Do not cut for hay within 120 days after an application of BROADAXE Herbicide.
