**Non-Food/Non-Feed Areas:** Examples of non-food/non-feed areas include garbage rooms, lavatories, floor drains (to sewers), entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, mop closets and storage (after packaging, canning or bottling). All areas that insects inhabit or through which insects may enter should be treated.

**Crawling Insects:** Apply as a spot, crack and crevice, or surface application to breeding areas, nesting sites, hiding places, and other places where crawling insects are found.

**Bedbugs:** Remove linens and wash before reuse. Apply to mattresses, especially tufts, folds and edges until moist. Apply to the interior of the frame. Allow to dry before remaking bed. Treat baseboards, molding and spot treat floors.

**Ticks and Fleas on Surfaces:** Remove pet bedding and destroy or clean thoroughly. Spray pet resting quarters. Adult fleas and larvae contact by spray will be killed. Put fresh bedding down once spray has dried. Do not spray animals directly. For best results, pets should be treated with an appropriate product before allowing them to return to the treated area. Spray rugs and carpets where infestations are bad. Test first for staining on an inconspicuous piece prior to use.

**OUTDOORS**

**Crawling Insects on Outside Surfaces of Buildings:** Spray foundation of building where insects are active and may find entrance up to a height of 2 to 3 feet. Apply as a residual spray to outside surfaces of buildings where insects tend to congregate. Spray areas include areas such as screens, window frames, eaves, porches, patios, garages and refuse dumps.

Spray infested surface of patio or picnic area, hitting as many insects as possible. Also spray legs of tables and chairs to repel ants.

**Ants:** Apply to ant trails, around doors and windows and other places where ants may be found.

**Flying & Stinging Insects:** Use only on outdoor surfaces. Spray outside surfaces of window and door frames and other areas where these pests may enter the home. Also spray localized resting areas, such as under eaves, porches, light fixtures and cords, railings, etc. where these insects may rest. Insects coming to rest on treated surfaces will be killed.

**WOOD INFESTING INSECTS:** Carpenter Ants, Carpenter Bees, and Termites (Subterranean, Formosan and Drywood) – The following applications are not a substitute for mechanical alteration, soil treatment or foundation treatment but merely a supplement for controlling active infestations of wood destroying insects including Subterranean, Formosan and Drywood termites. This product is not recommended as sole protection against termites. For active indoor termite infestations, get a professional inspection. For control inside and outside of structures, apply as general surface, spot, crack and crevice or wall void application. To kill wood destroying insect infestations in localized above-ground areas of the structure, inject into galleries or voids in damaged wood, or into spaces between damaged wooden structural members. Locate galleries by visual signs of wood destroying insect infestation or through the use of mechanical sounding techniques. Where necessary, penetrate the galleries or voids by drilling holes to receive the injector tip. Distribute drill holes to adequately treat the infestation. Applications must be made to inaccessible structure voids by drilling and then injecting into the infested void.

**For termites:** the purpose of such applications is to kill workers or winged forms which any may be present in the treated areas at the time of application.

**For carpenter bees:** Following treatment, the entrance holes must be left open 24 hours to be certain that returning adult bees are killed. When there is no activity, the hole may be sealed with a suitable sealant.

**Wood Destroying Insects Living Inside Trees Utility Poles, and Fences:** D-Force insecticide must be used as a spot treatment for control of above-ground termites inside trees, utility poles, fencing and decking materials and similar structural members. Wherever possible, locate an inferior infested cavity and inject in the appropriate quantities. Repeat applications as needed to maintain control of re-infestations.

**Aerial Termite Carton Nests in Trees:** Termite carton nests in trees must be injected with D-Force insecticide using an injection applicator. Multiple injection points to varying depths may be necessary.

**STORAGE AND DISPOSAL**

**Storage:** Do not store near heat or open flame. Store in a cool, dry area away from children.

**Container Disposal:** Replace cap, wrap container in several layers of newspaper and discard in trash. Do not incinerate or puncture. Can may be disposed of with other recyclables where local law permits.

**NOTICE:** Buyer assumes all responsibility for safety and use not in accordance with directions.
