DIACON®-DIGR

An insect growth regulator to control stored product insects by breaking the pest life cycle and preventing larvae from maturing into adults

Do not contaminate water, food, or feed by storage or disposal.

Keep out of reach of children.

Precautionary Statements

General Information:

CAUTION

When used according to label directions, prevents adult emergence and subsequent new generations of insects.

It is a violation of Federal Law to use this product in a manner inconsistent with the instructions on the label.

Use as a top-dressing application is effective against insect development. Unlike traditional pesticides, DIACON®-DIGR is not an adulticide, but its residual activity prevents the development of stored product insects during storage of commodities/food. (S)-Methoprene, the active ingredient in DIACON®-DIGR, when used according to label directions, prevents the emergence of stored product insects during storage of commodities/food.

DIACON®-DIGR is effective against insect larvae, beetles, and other insect pests that are affected by insect growth regulators (IGR’s). If the commodity is known to be infested when it is initially being placed into storage, fumigate the commodity to eliminate the existing insect populations following filling of bins or other storage facilities. Apply 8-10 pounds of DIACON®-DIGR per 1000 ft² to treat bins, warehouses, mills, food processing and packaging facilities, feed mills, and other storage areas.
