KILLS RATS, MICE, AND MEADOW VOLES*

KILLS ANTICOAGULANT RESISTANT NORWAY RATS, ROOF RATS AND HOUSE MICE

Due to Stop Feed Action, Rats and Mice Typically Feed Less or Cease Feeding Altogether

FASTRAC® Pellets

FOR INDOOR AND OUTDOOR USE

CAUTION

Handle this product with care. Wash hands before eating or handling food. Wear appropriate personal protective equipment. Keep out of reach of children and pets. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or milk-handling equipment or surfaces that come in direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

For treating burrows, use a long-handled spoon to place ½ to 1 ounce of bait deep into each active burrow entrance. Apply 1 to 6 ounces of bait per placement (usually at intervals of 15 to 30 feet). Adjust the amount of bait applied to the level of rat feeding expected at each bait placement.

REACH THE LABEL: Read this entire label and follow all use directions and use precautions. Use only for the sites, pests, and application methods described on this label.

RAT FEEDING: High consumption is expected to occur on the first day or two after treatment begins. After several days, inspect the placement and replenish bait at sites where there is evidence of heavy feeding or where there is continued evidence of rodent activity.

APPLICATION DIRECTIONS:

1. Store unused product out of reach of children.
2. Apply bait in locations out of reach of children, domestic animals and nontarget wildlife, or in tamper-resistant containers: House mouse (Mus musculus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys humulis), Golden mouse (Ochrotomys nuttalli), Polynesian rat (Rattus exulans), Meadow vole (Microtus pennsylvanicus), White-throated woodrat (Neotoma albigula), Southern plains woodrat (Neotoma micropus), and Mexican woodrat (Neotoma mexicana). This product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commensual rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (trucks, train, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fence and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops.

FASTRAC® Pellets may be applied to active rodent burrows to control rats within or beyond 100 feet of buildings and man-made structures, provided that infestations of these rodents have been confirmed. Bait must be placed no less than 6 inches into active rat burrows. Do not broadcast bait. Because Norway/rat infestations may occur in areas farther than 100 feet from buildings and man-made structures when the rodents have ample supplies of food and cover, efforts should be made to remove food trash, garbage, clutter and debris.

Do not place bait near or inside ventilation duct openings. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or milk-handling equipment or surfaces that come in direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations.

Manufactured by:

NET WEIGHT: 6 lbs (2.72 kg)

*For treating burrows, use a long-handled spoon to place ½ to 1 ounce of bait deep into each active burrow entrance. Close burrows with soil 3 to 7 days after bait placement. Return burrow entrances that are reopened by rats. If the area where treated burrows are located is accessible to children and nontarget animals, check burrows every morning and evening to make sure that bad has not been pushed out of burrows. Return and properly dispose of any bait that has become accessible to children or nontarget animals.

Kills rats, mice, and meadow voles; and Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.

This article is intended for veterinary use. It is not intended for use in human medicine.
