TYPES OF APPLICATION: Middles (in between rows of trees, vines or bushes); Strips (within rows of trees, vines or bushes)

PRECAUTIONS: Use extreme care to avoid contact of this herbicide solution, spray, drip or mist with foliage or green bark of trunk, branches, suckers, fruit or other parts of trees, canes and vines. Avoid application when recent pruning wounds or other mechanical injury have occurred. Contact of this product with other than matured brown bark could result in serious crop damage or destruction. Only shielded or
directed sprayers may be used in crops where potential for crop contact is high, and then only where there is sufficient clearance. For application in strips (within rows of trees), only selective equipment (directed spray, hooded sprayer, shielded sprayer, or wiper applicator) may be used in order to minimize the potential for overspray or drift of this product onto the crop. For berry crops, hooded sprayers must be fully enclosed including top, sides, front and back. Only wiper applicators or shielded sprayers capable of preventing all contact of this product with the crop may be used. See additional use instructions and precautions in the “APPLICATION EQUIPMENT AND TECHNIQUES” section of the Roundup PowerMAX Herbicide product label.

RESTRICTIONS: Allow a minimum of 3 days between application and transplanting.
