Pesticide Disposal and Container Handling:

If terms are not acceptable, return the unopened product container at once. By

best if the area is irrigated prior to bait treatment. Mole crickets typically come

Powdered bait can be applied directly to soil, where moles typically live, or to existing bait stations. When treating for ants, apply ½ to 1 oz of bait around ant

DIRECTIONS FOR USE

outside of cracks and crevices must be cleaned up and removed.

Small holes or confined areas can be treated with a hand-held spray or a hose sprayer. Apply bait on the soil in a band from the outside of cracks and crevices. This method is better than spraying because it is more effective and does not displace as much soil. Bait may be mixed with soil to a depth of 2 inches or may be suspended in a water solution and applied as a spray or a mist. Bait may also be applied in tree cavities and firewood piles, and under porches

around firewood piles, around landscaping stones and in mulch beds. Bait may
