To maintain peroxyacetic acid (PAA) to achieve adequate results. Intermittent dosing treatment usually require dose cycles of a minimum

This product may be used to control bacteria and biofouling in industrial air washing/scrubbing systems. The air washer must have operational and effective mist elimination systems. Prior to use of this product, heavily fouled

FOR USE IN ORGANIC PRODUCTION:

This product is suitable for use in the following systems: Water Systems, Oil and Gasfield Water Systems, and Bacteria and Algae Control in Recirculating, Agricultural, and Wastewater Treatment Systems.

ACTIVE INGREDIENT:

Peroxyacetic Acid 15.0%
Hydrogen Peroxide 22.0%
TOTAL 100.0%

Biotrol 150 is a peroxyacetic acid-based microbiocide developed for Equipment Sanitizing and

Water Systems, Oil and Gasfield Water Systems, and Bacteria and Algae Control in Recirculating, Agricultural, and Wastewater Treatment Systems.

Biotrol 150 can be used in water systems that are sensitive to pH swings. It can be used in water treatment systems that require short contact times, such as rapid sand filters, humidification systems, storage tanks, ponds, and biological treatment systems.

FOR DISINFECTION AND MICROBIAL CONTROL IN EFFLUENT TREATMENT SYSTEMS:

Use this product to treat sewage and wastewater effluent systems associated with public and private wastewater treatment plants. This product may be applied alone at any point in the treatment train, such as debulking control, or may

Continuous or Intermittent Addition: For continuous addition (dosing for RO systems, use 2-3 ppm of active peroxyacetic acid). Biotrol 150 can be fed continuously at dosages ranging from 0.11-1.2 lbs (1.5-16 fl. oz) of this product per 1000 gallons of water. For occasional treatment, feed rates do not exceed 93 ppm active peroxyacetic acid. This feed rate equals 15-75 fl. oz per 10,000 gallons of water. Repeat dose as necessary to maintain the required concentration may be added as necessary for treatment. Notice to Physician: Probable mucosal damage may contraindicate the use of gastric lavage.

Sanitize with a concentration of 0.7-2.0 fl. oz of this product in 10 gallons of water. Repeat dose as necessary until biofouling control is evident. This dosage is equivalent to 75-600 ppm peroxyacetic acid. This dosage may be used when applying indoors because pets may be at risk. Do not discharge effluent containing this product into lakes, streams, or any other water course. This product is not allowed in any National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product into septic systems or any other water course. This product may be harmful to aquatic life. The operator is responsible for complying with all applicable legal requirements.

Directions For Use

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Sanitizing Food Contact Surfaces: Sanitize with a concentration of 0.7-2.0 fl. oz of this product in 10 gallons of water. Repeat dose as necessary until biofouling control is evident. This dosage is equivalent to 75-600 ppm peroxyacetic acid. This dosage may be used when applying indoors because pets may be at risk. Do not discharge effluent containing this product into lakes, streams, or any other water course. This product is not allowed in any National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product into septic systems or any other water course. This product may be harmful to aquatic life. The operator is responsible for complying with all applicable legal requirements.
