FORMULATED FOR
LOVELAND PRODUCTS, INC.®, P.O. BOX 1286, GREELEY, COLORADO 80632-1286

Broad spectrum fungicide for control of plant diseases.

ACTIVE INGREDIENT:
Azoxystrobin:
  methyl (E)-2-(2-(6-(2-cyanophenoxy) pyrimidin-4-yl oxy)phenyl)-3-methoxyacrylate . . . . . . .   22.9%
OTHER INGREDIENTS   . . . . . . . . . . . . . . . . . .   77.1%
TOTAL   100.0%

Contains 2.08 pounds of active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN

CAUTION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)
For Additional Precautionary Statements, Complete First Aid, Directions for Use, Storage and Disposal and Other Use Information, See Inside This Label Booklet.

EPA REG. NO. 34704-1068

FORMULATED FOR
LOVELAND PRODUCTS, INC.®, P.O. BOX 1286, GREELEY, COLORADO 80632-1286
Azoxytrobin is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Azoxytrobin can be persistent for several months or longer.

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or regional office of the EPA.

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment, wastewater or rinsate.

GROUND WATER ADVISORY: Azoxytrobin and a degradate of azoxystrobin are known to leach through soil to ground water under certain conditions as a result of label use. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

SURFACE WATER ADVISORY: This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of azoxystrobin and a degradate of azoxystrobin from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

USER SAFETY RECOMMENDATIONS

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Wash thoroughly with soap and water after handling.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

FIRST AID

If swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If inhaled:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

FOR A MEDICAL EMERGENCY INVOLVING THIS PRODUCT CALL: 1-866-944-8565.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if swallowed. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Wear long-sleeved shirt and long pants, socks and shoes and chemical resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber.

Personal Protective Equipment (PPE)

Some materials that are chemically resistant to this product are listed below. If you want more options follow the instructions for Category A on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Chemical resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks

User Safety Requirements

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [(40 CFR 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

USER SAFETY REQUIREMENTS

Shoes plus socks
- Chemical resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Long-sleeved shirt and long pants
- Chloride, nitrile rubber or butyl rubber
- Chemical resistant gloves made of any waterproof material such as polyvinyl
ADDITIONAL REQUIREMENTS

Failure to follow the use directions and precautions on this label may result in crop injury, poor disease control, and/or illegal residues.

ATTENTION

• Satori® Fungicide is extremely phytotoxic to certain Apple varieties.
• AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to Apple trees (and Apple fruit).

PRODUCT USE PRECAUTIONS

Failure to follow the use directions and precautions on this label may result in crop injury, poor disease control, and/or illegal residues.

Notify State and/or Federal authorities and Loveland Products, Inc. immediately if you observe any adverse environmental effects due to use of this product.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Use of Satori® Fungicide through airblast application equipment on Grapes is prohibited in the following townships and boroughs of Erie County, Pennsylvania:

North East, Harborcreek, Lawrence Park, Erie, Presque Isle, Millcreek, Fairview, Girard and Springfield.

This prohibition is intended to help eliminate phytotoxicity problems with Apples observed in this geographic location.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY OR POOR DISEASE CONTROL.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:
• Coveralls
• Chemical resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
• Shoes plus socks

PRODUCT USE INSTRUCTIONS

Application: Thorough coverage is necessary to provide good disease control. Make no more spray solution than is needed for application. Avoid spray overlap, as crop injury may occur.

Adjuvants: Adjuvants such as Franchise® and Liberate® may be used to improve consistency and performance of this product. See specific crop application instructions for information regarding use of adjuvants.

Efficacy: Under certain conditions conducive to extended infection periods, use another registered fungicide for additional applications if maximum amount of Satori Fungicide has been used. If resistant isolates to Group 11 fungicides are present, efficacy can be reduced for certain diseases. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure, with highly susceptible varieties, or when environmental conditions are conducive to disease.

INTEGRATED PEST (DISEASE) MANAGEMENT

Integrate this product into an overall disease and pest management strategy whenever the use of a fungicide is required. Follow cultural practices known to reduce disease development, including selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters, and proper timing and placement of irrigation. Consult your local agricultural authorities for additional IPM strategies established for your area. Satori Fungicide may be used in State Agricultural Extension advisory (disease forecasting) programs which indicate application timing based on environmental factors favorable for disease development.
Crop Tolerance: Plant tolerance has been found to be acceptable for all crops on the label, however, not all possible tank-mix combinations have been tested under all conditions. When possible, test the combinations on a small portion of the crop to ensure that a phytotoxic response will not occur as a result of application. See precautions regarding Apple phytotoxicity.

RESISTANCE MANAGEMENT
Satori Fungicide (azoxystrobin) is a Group 11 fungicide. The mode of action for Satori Fungicide is the inhibition of the QoI (quinone outside) site within the electron transport system [Group 11]. Fungal pathogens can develop resistance to products with the same mode of action when used repeatedly. Because resistance development cannot be predicted, the best practice is to conform to resistance management strategies established for the crop and area use. Consult your local or State agricultural authorities for resistance management strategies that are complementary to those in this label. Resistance management strategies may include alternating and/or tank-mixing with products having different modes of action or limiting the total number of applications per season. Loveland Products, Inc. encourages responsible resistance management to ensure effective long-term control of the fungal diseases on this label.

Follow the crop specific resistance management directions in the directions for use.

If no resistance direction on number of applications is specified in the directions for use, follow the instructions in the table below.

If planned total number of fungicide applications per crop is:

<table>
<thead>
<tr>
<th>Solo QoI fungicide sprays</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>
<td>QoI fungicide sprays in mixture (tank-mix or formulated)</td>
<td>1</td>
<td>2</td>
<td>2</td>
<td>2</td>
<td>3</td>
<td>3</td>
<td>3</td>
<td>3</td>
<td>4</td>
<td>4</td>
<td>6</td>
<td>6</td>
</tr>
</tbody>
</table>

In situations requiring multiple sprays, develop season long spray programs for Group 11 (QoI) fungicides. In crops where 2 sequential Group 11 fungicide applications are made, alternate with 2 or more applications of a fungicide that is not in Group 11. If more than 12 applications are made, observe the following guidelines:

- When using a QoI fungicide as a solo product, the number of applications must be no more than 1/3 (33%) of the total number of fungicide applications per season.
- For QoI mixes in programs in which tank mixes or premixes of QoI with mixing partners of a different mode of action are utilized, the number of QoI containing applications must be no more than 1/2 (50%) of the total number of fungicide applications per season.
- In programs in which applications of QoI are made with both solo products and mixtures, the number of QoI containing applications must be no more than 1/2 (50%) of the total number of fungicide applications per season.

If a Group 11 fungicide is applied to the seed or soil, do not make another application with a Group 11 fungicide for at least 3 weeks.

Rotational Crop Restrictions
The following crops may be planted at the specified interval following application of Satori Fungicide.

<table>

</tbody>
</table>

Spray Drift Management
To avoid spray drift, do not apply when conditions favor drift beyond the target area. The interaction of many equipment and weather related factors determine the potential for spray drift. AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR AND THE GROWER.

ATTENTION
- Satori Fungicide is extremely phytotoxic to certain Apple varieties.
- AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to Apple trees (and Apple fruit).
- DO NOT spray Satori Fungicide where spray drift may reach Apple trees.
- DO NOT spray when conditions favor drift beyond area intended for application. Conditions which may contribute to drift include thermal inversion, wind speed and direction, sprayer nozzle/pressure combinations, spray droplet size, etc. Contact your State extension agent for spray drift prevention guidelines in your area.
- DO NOT use spray equipment which has been previously used to apply Satori Fungicide to spray Apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain Apple and Crabapple varieties.

AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.

Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat.

MIXING AND APPLICATION METHODS
Spray Equipment
Satori Fungicide may be applied with all types of spray equipment commonly used for making ground and aerial applications. Proper adjustments and calibration of spraying equipment to give good canopy penetration and coverage is essential for good disease control.

Nozzles
- Equip sprayers with nozzles that provide accurate and uniform application.
- Use nozzles that are the same size and uniformly spaced across the boom.
- Calibrate sprayer before use.
- It is suggested that screens be used to protect the pump and to prevent nozzles from clogging.
- Use screens placed on the suction side of the pump that are 16-mesh or coarser.
- Do not place a screen in the recirculation line.
- Use 50-mesh or coarser screens between the pump and boom, and where required, at the nozzles.
- Check nozzle manufacturer’s specifications.

Pump
- Use a pump with capacity to:
  1. Maintain 35 to 40 psi at nozzles
  2. Provide sufficient agitation in tank to keep mixture in suspension - this requires recirculation of 10% of tank volume per minute.
• Use a jet agitator or liquid sparge tube for agitation.
• Do not air sparge.

For more information on spray equipment and calibration, consult sprayer manufacturers and state agricultural agency for advice. For specific local directions and spray schedules, consult your state agricultural agency for advice.

Mixing Instructions
• Satori Fungicide is a suspension concentrate (SC) formulation.
• Prepare no more spray mixture than is required for the immediate operation.
• With the agitator running, add Satori Fungicide to the tank.
• Continue agitation while adding the remainder of the water.
• Maintain agitation until all of the mixture has been sprayed.

Satori Fungicide Alone (No Tank Mix)
• Add 1/2 to 2/3 of the required amount of water to the spray or mixing tank.
• Begin application of the spray solution after Satori Fungicide has completely dispersed into the mix water.
• Maintain agitation until all of the mixture has been sprayed.

Satori Fungicide + Tank Mixtures: Satori Fungicide is usually compatible with all tank-mix partners listed on this label. To determine the physical compatibility of Satori Fungicide with other products, use a jar test. Using a quart jar, add the proportionate amounts of the products to 1.0 quart of water. Add wettable powders and water dispersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank.

Satori Fungicide has demonstrated some phytotoxic effects when mixed with products that are formulated as ECs. These effects are enhanced if applications are made under cool, cloudy conditions and these conditions remain for several days following application. In addition, adjuvants that contain some form of silicone have also contributed to phytotoxicity.

Mixing in the Spray Tank
• Add 1/2 to 2/3 of the required amount of water to the spray or mixing tank.
• With the agitator running, add the tank-mix partner(s) into the tank in the same order as described above.
• Allow the material to completely dissolve and disperse into the mix water.
• With the agitator running, add the remainder of the water and Satori Fungicide to the spray tank.
• Allow Satori Fungicide to completely disperse.
• Spray the mixture with the agitator running.

APPLICATION INSTRUCTIONS THROUGH IRRIGATION SYSTEMS (CHEMIGATION)
• Use only on crops for which chemigation is specified on this label.
• Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems. Do not apply this product through any other type of irrigation system.

• Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
• Apply in 0.1 to 0.25 inches per acre. Excessive water may reduce efficacy.
• If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.
• Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place.
• A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments if needed.

Spray Preparation: Clean chemical tank and injector system thoroughly. Flush system with clean water.

Drip irrigation: Satori Fungicide may be applied through drip irrigation systems for soil-borne disease control. Ensure that the soil has adequate moisture capacity prior to drip application.

Terminal drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, delay subsequent irrigation (water only) for at least 24 hours following drip application.

Sprinkler Irrigation
• Apply this product through sprinkler irrigation systems including center pivot, lateral move, end tow, side [wheel] roll, traveler, big gun, solid set, or hand move irrigation systems.
• Do not apply this product through any other type of irrigation system except as specified on this label.
• Apply with center pivot or continuous-move equipment distributing 1/2 acre-inch or less during treatment.
• In general, use the least amount of water required for proper distribution and coverage.
• If stationary systems (solid set, handheld or wheel lines other than continuous-move) are used, inject this product into no more than the last 20 to 30 minutes of the set.
• Do not apply when winds are greater than 10 to 15 mph to avoid drift or wind skips.
• Do not apply when wind speed favors drift beyond the area intended for treatment.
• Plant injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform treated water.
• Thorough coverage of foliage is required for good control.
• Maintain good agitation during the entire application period.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Operating Instructions
1. Do not apply when wind speed favors drift beyond the area intended for treatment. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
SOILBORNE/SEEDLING DISEASE CONTROL

For those crops that have specific Use Directions for soilborne disease control: Satori Fungicide can provide control of many soilborne diseases if applied early in the growing season. Specific applications for soilborne diseases include in-furrow applications and banded applications applied over the row, either shortly after plant emergence or during herbicide applications or cultivation. These applications will provide control of pre or postemergence damping off and diseases that infect plants at the soil-plant interface.

The use of either type of application depends on the cultural practices in the region. In some locations, one type of application may provide better disease control than the other, depending on the timing of the disease epidemic. Seedling diseases are generally controlled by in-furrow applications while banded applica-
tions are more effective against soilborne diseases that develop later in the sea-
son. Consult your local expert to get some guidance regarding application type.

Under cool, wet conditions, crop injury from soil directed applications can
occur.

**Banded**
- Apply Satori Fungicide prior to infection as a directed spray to the soil, using
  single or multiple nozzles, adjusted to provide thorough coverage of the lower
  stems and the soil surface surrounding the plants.
- Limit band width to 7 inches or less.
- Apply Satori Fungicide at a rate of 0.40 to 0.80 fluid ounce product (0.10 to
  0.20 ounce active ingredient) per 1000 row feet (for banded applications on
  22-inch rows the maximum application rate is 0.70 fluid ounce per 1000 row
  feet).

  **These applications come into contact with the foliage and are counted as
  foliar applications when considering resistance management.**
  **They may be applied during cultivation or hilling operations to provide soil
  incorporation.**

**In-Furrow**
- Apply Satori Fungicide as an in-furrow spray in 3.0 to 15.0 gallons of water at
  planting.
- Mount the spray nozzle so the spray is directed into the furrow just before the
  seed are covered.
- Use the higher rate when the weather conditions are expected to be conducive
  for disease development, if the field has a history of Pythium problems, or if
  minimum/low till programs are in place.

Do not apply more than 2 sequential applications of Satori or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Cereals**

| Barley   | Kernel bunt or Black point (Alternaria spp.)                                  | 6.0 to 12.0 | Begin applications prior to disease development. Protecting the flag leaf is important for maximizing disease control. For best results, sufficient water volume must be used to provide thorough coverage. Satori can be applied by ground, air or chemigation. A crop oil concentrate adjuvant may be added at 1.0% v/v to optimize efficacy. For chemigation, apply in 0.1 to 0.25 inches/A of water. Chemigation with excessive water may lead to a decrease in efficacy. Do not apply more than 2 sequential applications of Satori or other Group 11 fungicides before alternation with a fungicide that is not in Group 11. Do not make more than 2 applications of Satori or other Group 11 fungicide/season. |
| Oats     | Net blotch (Pyrenophora teres f. sp. teres)                                    | 6.0 to 12.0 |                                                                           |
| Rye      | Net blotch (Pyrenophora teres f. sp. teres)                                    | (0.10 to 0.20) |                                                                           |

**Specific Use Restrictions:**
1. Do not apply after Feekes 10.54.
2. Do not apply more than 0.40 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 7 days of grazing or harvest (7-day PHI) for forage and hay.
### Crop, Bushberry Subgroup 13-07B

### Blackberry rust (Phragmidium spp.) | 10.0 to 15.5 (0.16 to 0.25) | Cont’d. next page
**Berries, Cranberry Subgroup 12-07A cont’d**

**Specific Use Restrictions:**
1. Do not apply more than 92.3 fluid ounces of product per acre per season.
2. Do not apply more than 1.5 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Satori Fungicide may be applied the day of harvest (0-day PHI).

**Crop: Berries, Low Growing Subgroup 13-07G (except Cranberry) Strawberry**

**Target Diseases**
- Anthracnose (*Colletotrichum fragariae*)
- Leather rot (*Phytophthora cactorum*)
- Powdery mildew (*Sphaerotheca macularia*)
- Suppression of Botrytis on the foliage (*Botrytis cinerea*)

**Use Rate**
6.0 to 15.5 fl oz Product/A (0.10 to 0.25 lb AI/A)

**Remarks**
Begin applications prior to disease development and continue throughout the season on a 7- to 10-day schedule, following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. For Leather rot control, apply 2 applications on a 7-day schedule from late bloom through harvest.

**Field Nurseries:** Apply to young plants in field nurseries by ground, drip, or overhead chemigation. If applying through drip irrigation, calculate the rate as a band application with a band width equal to the root zone width. Inject Satori into the irrigation water.

For dip applications at transplanting for commercial berry production:
- For suppression of Root and Crown rot caused by *Colletotrichum* spp., mix 5.0 to 8.0 fl oz of Satori/100 gal of water. Dip plants for 2 to 5 minutes. Plant treated plants as quickly as possible. It is recommended that plants be washed to remove excess soil prior to dipping. For continued Anthracnose control, follow with foliar applications beginning 2 to 3 weeks after transplant.
- Do not apply more than 2 sequential applications of Satori or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Soilborne Diseases**
- Seedling root rot (*Rhizoctonia solani*)
- Basal stem rot (*Rhizoctonia solani*)

**Use Rate**
0.40 to 0.80 fl oz/1000 row ft

**For soilborne/seedling disease control, see directions and rates under the SOILBORNE/SEEDLING DISEASE CONTROL section.**

**Additional Low Growing Berries:**
- Bearberry
- Bilberry
- Cloudberry
- Muntries
- Partridgeberry including all cultivars and/or hybrids of these.

**Specific Use Restrictions:**
1. Do not apply more than 61.5 fluid ounces of product per acre per season.
2. Do not apply more than 1.0 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Satori Fungicide may be applied the day of harvest (0-day PHI).

**Brassica**

- **Head and Stem subgroup:**
  - Broccoli
  - Brussels sprouts
  - Cabbage
  - Cauliflower
  - Cavolo broccoli
  - Chinese broccoli (gai lon)
  - Chinese cabbage (napa)
  - Chinese mustard cabbage (gai choy)
  - Kohlrabi
  - Including all cultivars and/or hybrids of these.

**Target Diseases**
- Alternaria leaf spot (*Alternaria brassicicola*)
- Anthracnose (*Colletotrichum* spp.)
- Cercospora leaf spot (*Cercospora brassicicola*)
- Downy mildew (*Peronospora parasitica*)
- Powdery mildew (*Erysiphe polygoni*)
- Pin rot (*Alternaria brassicicola*)
- Ring spot (*Microdochium brassicicola*)
- White leaf spot (*Pseudocercosporella herpotrichoides*)
- White rust (*Albugo candida*)

**Use Rate**
6.0 to 15.5 fl oz Product/A (0.10 to 0.25 lb AI/A)

**Remarks**
Begin applications prior to disease development and continue throughout the season on a 7- to 14-day schedule, following the resistance management guidelines. Applications may be made by ground, air, or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Use a minimum of 10.0 gal of water/A by ground, and minimum of 3.0 gal/A by air. Do not apply more than 2 applications of Satori Fungicide or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Specific Use Restrictions:**
1. Do not apply more than 92.3 fluid ounces of product per acre per season.
2. Do not apply more than 1.5 pound active ingredient per acre per season of azoxystrobin-containing products.
3. May be applied the day of harvest (0-day PHI).

For all other diseases, begin applications prior to disease development and continue throughout the season every 7 to 14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. If applications are made by air, use the higher rates for adequate control. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Do not apply more than 1 application of Satori Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. Test mixtures of Satori Fungicide with insecticides and silicone adjuvants for crop safety before application to the crop.

**Soilborne Diseases**<br>Rhizoctonia damping-off (<i>Rhizoctonia solani</i>) | 0.40 to 0.80 fl oz/1000 row ft | For soilborne/seedling disease control, see directions and rates under **SOILBORNE/SEEDLING DISEASE CONTROL** section. If the application is an in-furrow application, spray just prior to seed placement so that the majority of the chemical is under the seed. This will reduce the potential for phytotoxicity, especially if fertilizer is added to the application.

<td>6.0 to 9.0 (0.10 to 0.15)</td>
<td>For optimum disease control, begin applications prior to or in the early stages of disease development. Applications may be made by ground, air, or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Minimum application volumes for air and ground are 5.0 and 10.0 gal/A, respectively. Target the first Satori Fungicide application approximately at pinhead square to first bloom to protect the plant from diseases. Subsequent application(s) are specified on a 14- to 21-day schedule. An additional application may be made depending on environmental conditions and the health of the cotton plant. Under poor environmental conditions conducive to seedling disease and poor cotton growth, Satori Fungicide may be damping off and other diseases which result in plant stand loss. Do not apply more than 2 foliar applications of Satori Fungicide or other Group 11 fungicides before alternating with a fungicide that has a different mode of action. Do not make more than 3 foliar applications of Satori Fungicide or other Group 11 fungicides/crop/yr.</td>

Cucurbits

- Cantaloupe
- Chayote
- Chinese-wax gourd
- Cucumber
- Gourds
- Honeydew
- Melons
- Momordica spp. (bitter melon, balsam apple)
- Muskmelon
- Pumpkin
- Squash
- Watermelon
- Zucchini

- Including cultivars and/or hybrids of these.

- Alternaria blight (Alternaria cucumerina)
- Anthracnose (Colletotrichum ageratum)
- Belly rot (Rhizoctonia solani)
- Cercospora leaf spot (Cercospora citrulina)
- Downy mildew (Pseudoperonospora cubensis)
- Gummy stem blight (Didymella bryoniae)
- Leaf spots (Alternaria spp., Cercospora spp.)
- Myrothecium canker (Myrothecium roridum)
- Plectosporium blight (Plectosporium lacatum)
- Powdery mildew (Sphaerotheca fuliginea, Erysiphe cichoracearum)
- Target leaf spot (Corynespora cassicola)
- Ulocladium leaf spot (Ulocladium cucurbitacearum)

- 6.0 to 15.5 (0.10 to 0.25)

- For both Downy and Powdery mildew, make preventative applications on a 5- to 7-day schedule. For Belly rot control, make the first application at the 1- to 3-leaf crop stage with a second application just prior to vine tip over or 10 to 14 days later whichever occurs first. For all other diseases, begin applications prior to disease development and continue throughout the season every 7 to 14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance.

- Do not tank mix Satori Fungicide with COC, MSO or silicon adjuvants.
- Do not tank mix Satori Fungicide with malathion, Kelthane®, Thiodan®, Phaser®, Lannate®, Lorsban®, M-Pede® or Botran®.
- Do not apply more than 1 application of Satori Fungicide in one season before alternation with a fungicide that is not in Group 11.
- Do not make more than 4 foliar applications of Satori Fungicide in one season.

Soilborne Diseases

- Rhizoctonia root rot (Rhizoctonia solani)

- 0.40 to 0.80 fl oz/1000 row ft

- For soilborne/seedling disease control, see directions and rates under SOILBORNE/SEEDLING DISEASE CONTROL section.

Specific Use Restrictions:
1. Do not apply more than 92.3 fluid ounces of product per acre per season.
2. Do not apply more than 1.5 pounds active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 1 day of harvest (1-day PHI).

<td>Black dot (Colletotrichum coccodes) Early blight (Alternaria solani) Late blight (Phytophthora infestans) Powdery mildew (Erysiphe cichoracearum)</td>
<td>6.0 to 20.0 (0.10 to 0.33)</td>
<td>Early blight - For a 7-day application schedule, use Satori Fungicide 6.2 fl oz product/A. Late blight - For a 14-day application schedule, use the 12.0 fl oz product/A rate. Late blight - Apply Satori Fungicide at 12.0 fl oz product/A on a 7-day schedule. Initiate Late blight applications in a preventative schedule prior to disease development according to local practices. If Late blight symptoms develop or conditions favor disease, switch immediately to a non-Group 11 fungicide, using a 5-day schedule. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. For all other diseases, begin applications prior to disease development and continue throughout the season every 7 to 14 days following the resistance management guidelines. Use the high rate and the shorter interval if disease epidemics are severe. Applications may be made by ground, air or chemigation. Do not apply more than 1 application of Satori Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11.</td>

Soilborne Diseases
- Black dot (Colletotrichum coccodes)
- Black scurf (Rhizoctonia solani)
- Silver scurf (Helminthosporium solani)

0.40 to 0.80 fl oz/ 1000 row ft

For soilborne/seedling disease control, see directions and rates under SOILBORNE/SEEDLING DISEASE CONTROL section.

Cont’d next page
Specific Use Restrictions:
1. Do not apply more than 123.0 fluid ounces of product per acre per season.
2. Do not apply more than 2.0 pounds active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 14 days of harvest.

Potatoes cont'd

Crop Target Diseases Use Rate Fl Oz Product/A (Lb AI/A) Remarks

Rice Sheath/Stem Diseases Sheath blight
(Rhizoctonia solani) Apply prior to disease development. Applications may be made by ground, air or chemigation. For aerial application, use volumes of 5.0 to 10.0 GPA. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance.

Aggregate sheath spot
(Cochlosporangium oryzae-sativae = Rhizoctonia oryzae-sativae) 6.0 to 18.5 (0.10 to 0.30) For Sheath blight control, application rates may vary from 9.0 to 12.0 fl oz/A depending on the growth stage of the rice and the severity of the disease. Consult with your local extension personnel or Loveland Products, Inc. representative for information on Sheath blight control.

Black sheath rot
(Gaeumannomyces graminis var. graminis) 9.0 to 18.5 (0.15 to 0.30) For other Sheath/Stem diseases including Stem rot, Black sheath rot, Aggregate sheath spot and Sheath spot, apply when disease is less than 4 inches above water line usually between panicle differentiation (PD) + 5 days to PD + 10 days or at initial sign of disease. Under heavy disease pressure and conditions favorable for disease development, a second application may be applied.

Foliar Diseases Brown leaf spot
(Cochliobolus miyabeanus) Begin applications prior to disease development. Use the high rates under conditions favorable for severe disease pressure, dense plant canopies, or when susceptible varieties are planted. Contact extension personnel for local economic thresholds and timings for specific diseases in your area. Applications may be made by ground, air or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Do not apply more than 2 sequential applications of Satori Fungicide or other Group 11 fungicides before alternating with a fungicide that is not in Group 11.

Panicle Diseases Kernel smut
(Tilletia barclayana = Neovossia barclayana) 6.0 to 15.5 (0.10 to 0.25) Begin applications prior to disease development. Use the high rates under conditions favorable for severe disease pressure, dense plant canopies, or when susceptible varieties are planted. Contact extension personnel for local economic thresholds and timings for specific diseases in your area. Applications may be made by ground, air or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Do not apply more than 2 sequential applications of Satori Fungicide or other Group 11 fungicides before alternating with a fungicide that is not in Group 11.

Sorghum Anthracnose
(Colletotrichum graminicola) 6.0 to 15.5 (0.10 to 0.25) Begin applications prior to disease development. Use the high rates under conditions favorable for severe disease pressure, dense plant canopies, or when susceptible varieties are planted. Contact extension personnel for local economic thresholds and timings for specific diseases in your area. Applications may be made by ground, air or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Do not apply more than 2 sequential applications of Satori Fungicide or other Group 11 fungicides before alternating with a fungicide that is not in Group 11.

Soilborne Diseases Damping-off
(Rhizoctonia solani, Pythium aphanidermatum) 0.40 to 0.80 fl oz/1000 row ft For soilborne/seeding disease control, see directions and rates under SOILBORNE/SEEDLING DISEASE CONTROL section.
**Sorghum cont’d**

**Specific Use Restrictions:**
1. For grain and stover, do not apply more than 0.75 pound active ingredient per acre per season of azoxystrobin-containing products.
2. For forage, do not apply more than 0.5 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 14 days of harvest (14-day PHI).

Sugarcane  | Brown rust (Puccinia melanocephela) Orange rust (Puccinia kuehnii) | 9.0 to 12.0 (0.15 to 0.20)    | Begin applications prior to Rust development, and continue throughout the season every 14 to 28 days following resistance management guidelines. Scout fields and begin applications at the earliest sign of Rust. An adjuvant may be used at recommended rates. For ground applications, apply Satori in sufficient water volume for adequate coverage and canopy penetration. Applications may be made by ground, air or chemigation. Do not apply more than 2 sequential applications of Satori or other Group 11 fungicide, before alternation with a fungicide that is not in Group 11. Do not make more than 4 foliar applications of Satori or other Group 11 fungicide/A/yr. |
Tobacco    | Blue mold (Peronospora tabacina)  Frogeye leafspot (Cercospora nicotianae) Target spot (Rhizoctonia solani) | 6.0 to 12.0 (0.10 to 0.20)    | Begin applications prior to disease development or at first indication that Blue mold is in the area. Do not apply Satori Fungicide as a curative application. If Blue mold is present in the field, initiate applications with Acrobat® MZ prior to a Satori Fungicide application. Apply on a 7- to 14-day interval with shorter intervals under conditions conducive to disease development. For ground applications, apply Satori Fungicide in sufficient water volume for adequate coverage and canopy penetration. For aerial application, use volumes of 10.0 to 15.0 GPA. Applications may be made by ground, air or chemigation. Do not apply Satori Fungicide on greenhouse seedlings. Do not tank mix with Thiodan. Tank mixing Satori Fungicide with insecticides formulated as ECs or containing high amounts of solvents, may cause some crop injury. Do not apply more than 1 application of Satori Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. NOTE: Satori Fungicide may enhance weather flecking on the leaves of certain tobacco types. This does not affect yield and quality. |
Tomatoes   | Anthracnose (Colletotrichum gloeosporioides) Black mold (Alternaria alternata) Buckeye rot (Phytophthora spp.) Early blight (Alternaria solani) Powdery mildew (Gliosporium sp.) Septoria leaf spot (Septoria lycopersici) Target spot (Corynespora cassicola) | 5.0 to 6.2 (0.06 to 0.10)    | Begin applications prior to disease development and continue throughout the season following the resistance management guidelines. For Late blight, apply at 5- to 7-day intervals. For all other tomato diseases, apply at 7- to 21-day intervals. Applications may be made by ground, air or chemigation. Do not apply more than 1 application of Satori Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. Under certain weather conditions (particularly high temperatures) Satori Fungicide in combination with high rates of silicone-based or oil containing (petroleum or crop) additives or adjuvants may cause injury. Do not exceed 0.125% adjuvant (v/v). Consult a Loveland Products, Inc. representative for more information concerning additives or adjuvants. |

Specific Use Restrictions:
1. Do not apply more than 0.80 pound active ingredient per acre per season of azoxystrobin-containing products.
2. When applying by air, use no less than 5.0 gallons spray solution per acre.
3. Do not apply within 30 days of harvest (30-day PHI).

Tobacco Transplants in Greenhouse KY only

Target spot (Rhizoctonia solani) 6.0 (0.1) Application Directions: Apply 6.0 oz/A or 0.14 oz (4.0 ml)/1000 sq ft in enough water for thorough coverage (recommend 5.0 gal/1000 sq ft). Make only 1 application prior to transplanting.

### Complete List of Tomato Crops

- Bush tomato
- Cocona
- Currant tomato
- Garden huckleberry
- Goji berry
- Groundcherry
- Naranjilla
- Sunberry
- Tomatillo
- Tomato
- Tree tomato
- cultivars, varieties, and/or hybrids of these.

### Specific Use Restrictions:

1. Do not apply more than 37.0 fluid ounces of product per acre per season.
2. Do not apply more than 0.60 pound active ingredient per acre per season of azoxystrobin-containing products.
3. May be applied the day of harvest (0-day PHI).

### Tree Nuts

- Beechnut
- Brazil nut
- Butternut
- Cashew
- Chestnut
- Chinquapin
- Filbert
- Hickory
- Macadamia
- Pecan
- Walnut
- Almonds, Pistachios (see specific use instructions)

### Specific Use Restrictions:

1. Do not apply more than 73.8 fluid ounces of product per acre per season.
2. Do not apply more than 1.2 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 45 days of harvest (45-day PHI).

### Tropical Fruit

- Acerola
- Atemoya
- Avocado
- Birla
- Canistel
- Cheirimoya
- Custard apple
- Dragon fruit
- Feijoa
- Guava
- Krama
- Java/Grape
- Jackfruit
- Longan
- Loquat
- Lychee

<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vegetables, tuberosous and corn, subgroup</td>
<td>Foliar Diseases: Alternative leaf spot (Alternaria spp.)&lt;sup&gt;1&lt;/sup&gt;, Ascochyta leaf spot (Ascochyta cyperi), Rust (Puccinia helianthi), White rust (Albugo tragopogonis)</td>
<td>6.0 to 20.0 (0.10 to 0.33)</td>
<td>For Powdery mildew, make preventative applications on a 5- to 7-day schedule. For all other diseases, begin applications prior to disease development and continue throughout the season every 7 to 14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. Do not apply more than 1 application of Salton Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11.</td>
</tr>
</tbody>
</table>

### Specific Use Restrictions:
1. Do not apply more than 123.0 fluid ounces of product per acre per season.
2. Do not apply more than 2.0 pounds active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 14 days of harvest (14-day PHI).

<table>
<thead>
<tr>
<th>Crop</th>
<th>Foliar Diseases: Cercospora leaf spot (Cercospora spp.)</th>

<th>Soilborne Diseases: Circular spot, Southern blight (Sclerotium rolfsii), Pythium root rot (Pythium aphanidermatum), Rhizoctonia stem canker, Crown rot (Rhizoctonia solani)</th>
<th>Use Rate</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wheat Triticale</td>
<td>Leaf rust (Puccinia tritici = Puccinia recondita f.sp. tritici), Septoria leaf and stem blight (Septoria inhab, Septoria nodorum), Stem rust (Puccinia graminis), Bacterial leaf spot (Pyrenopeziza ribis)</td>
<td>4.0 to 12.0 (0.07 to 0.20)</td>
<td>For wheat, applications should be applied prior to disease development. Applications may be made by ground, air or chemigation. A crop oil concentrate adjuvant may be added at 1.0% v/v to optimize efficacy. Do not apply more than 2 sequential applications of Salton Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. Do not make more than 2 applications of Salton Fungicide or other Group 11 fungicide/season.</td>
</tr>
</tbody>
</table>

### Specific Use Restrictions:
1. Do not apply within 7 days of harvest (7-day PHI).
2. Do not apply more than 0.40 pound active ingredient per acre per season of azoxystrobin-containing products.
3. Do not apply within 7 days (7-day PHI) for forage and hay.
<table>
<thead>
<tr>
<th>Crop</th>

</tr>
</thead>
<tbody>
<tr>
<td>Wild Rice</td>
<td>Brown Spot (Bipolaris oryzae or Bipolaris sorokiana) Also known as Helminthosporium oryzae and H. sativum</td>
<td>12.5 to 15.5 (0.20 to 0.25)</td>
<td>Apply prior to disease development. Applications may be made by ground, air, or chemigation. For aerial application, use volumes of 5.0 to 10.0 GPA. An adjuvant such as Liberate or Franchise may be added to enhance consistency and performance. For foliar diseases, apply Satori Fungicide prior to disease development. Apply during tillering, boot, early heading, or at initial sign of disease. Under heavy disease pressure and conditions favorable for disease development, a second application may be applied. Do not apply more than 2 sequential applications of Satori Fungicide or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. Do not make more than 2 applications of Satori Fungicide or other Group 11 fungicide/season.</td>
</tr>
</tbody>
</table>

Specific Use Restrictions:
1. Do not treat wild rice fields used for aquaculture of fish and crustaceans.
2. Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat. Applicators must use care in making applications near non-target aquatic habitats.
3. Do not apply more than 0.70 pound active ingredient per acre per season of azoxystrobin-containing products.
4. Do not apply within 28 days of harvest (28-day PHI).
5. Do not allow release of irrigation or flood water for at least 14 days after the last application.

<tr>
<td>Bananas</td>
<td>Crown rot/Crown mold</td>
<td>200 to 400 ppm solution</td>
<td>Apply Satori as a single application of a 200 to 400 ppm solution to achieve good coverage. The application may be made as a spray, dip or may be painted onto the cut ends of the bananas. Application of the 200 ppm rate is appropriate for short distance transportation (e.g., within the USA). When a longer time in transport is expected (export), use the 300 to 400 ppm rate. If alum (1% w/v) is added to the spray solution, stir the suspension frequently as sedimentation and flocculation may occur. Addition of a non-ionic surfactant (0.10% v/v) may improve the compatibility of this mixture.</td>

</tr>
</tbody>
</table>

**Specific Use Restrictions:**

1. Do not make more than 1 application to bananas as post-harvest treatment.
2. Satori may be degraded by exposure to direct sunlight. Do not store treated fruit in direct sunlight.

**Citrus Fruit Crop Group**

- **10-10**
  - Calamondin
  - Citron
  - Grapefruit
  - Kumquat
  - Lemon
  - Lime
  - Mandarin
  - Orange (sour and sweet)
  - Pummelo
  - Satsuma Mandarin
  - Tangerine
  - Uniq fruit

  Including all cultivars and/or hybrids of these. See complete list of citrus fruit crops below.

  **Penicillium decays**
  - Green mold
  - Whisker mold
  - Suppression of Blue mold
  - Diplodia stem-end rot
  - Phomopsis stem-end rot

  **See Remarks**

  **Use Satori as a dip, drench, flood, or spray for the control of certain post-harvest diseases.**

  **For high volume (dilute) applications:** Mix 32.0 to 64.0 fl oz of Satori in 25.0 to 100 gal of an appropriate water, wax/oil emulsion or aqueous dilution of a wax/oil emulsion for the crop being treated. Use T-Jet, flooders, or similar application systems.

  **For low volume (concentrate) applications:** Mix 32.0 to 64.0 fl oz of Satori in 7.0 to 25.0 gal of water, wax/oil emulsion, or aqueous dilution of wax/oil emulsion for the crop being treated. Apply to 250,000 lb of fruit. Use a controlled droplet type of applicator or similar system.

  **For dip applications:** Mix 32.0 to 64.0 fl oz of Satori in 100 gal of water, wax/oil emulsion, or aqueous dilution of wax/oil emulsion. Dip for approximately 30 seconds and allow fruit to drain. For maximum decay control, treat citrus fruit once before storage and once after storage, just prior to marketing.

**Complete List of Citrus Fruit Crops:**

- Australian Desert lime (*Eremocitrus glauca*)
- Australian finger lime (*Microcitrus australasica*)
- Grapefruit (*Citrus paradise*)
- Japanese summer grapefruit (*Citrus swinglei*)
- Kumquat (*Fortunella margarita*), Lemon (*Citrus limon*)
- Lime (*Citrus aurantifolia*)
- Mediterranean mandarin (*Citrus deliciosa*)
- Mount White lime (*Microcitrus garrawayorum*)
- New Guinea wild lime (*Microcitrus umbellata*)
- Orange, sour (*Citrus aurantium*), Orange, sweet (*Citrus sinensis*), Pummelo (*Citrus maxima*), Russell River lime (*Microcitrus incisa*)
- Satsuma mandarin (*Citrus unshiu*)
- Sweet lime (*Citrus limetta*)
- Tachibana orange (*Citrus tachibana*)
- Tahiti lime (*Citrus latifolia*)
- Tangelo (*Citrus x tangar*)
- Tangerine (mandarin) (*Citrus reticulata*)
- Tangerine (nobilis) (*Citrus reticulata*)
- Tangelo (*Citrus x tangelo*)
- Tangerine (*Citrus reticulata*)
- Tangerine (*Citrus reticulata*)
- Tangelo (*Citrus x tangelo*)
- Uniq fruit (*Citrus aurantium*)
- Mandarins, varieties and/or hybrids of these.

**Specific Use Restrictions:**

1. Do not make more than 2 applications to citrus fruit as post-harvest treatments.
2. Satori may be degraded by exposure to direct sunlight. Do not store treated fruit in direct sunlight.

**Tuberous and Corm, Subgroup 1C- Post Harvest**

- Arracacha
- Arrowroot
- Artichoke
- Jerusalem
- Canna, edible
- Cassava, bitter and sweet
- Chayote (root)
- Chufa
- Dasheen
- Ginger
- Lenen
- Potato
- Sweet potato
- Tapioca
- Tumeric
- Yam bean
- Yam, true

...
Use Satori as a post-harvest spray for the control of certain post-harvest rots caused by Silver scurf (Helminthosporium solani), Fusarium species, Late blight (Phytophthora infestans), and Pink rot (Phytophthora erythroseptica).  

**Specific Use Restrictions:**
- Do not use on seed potatoes or seed pieces.
- Do not make more than 1 post-harvest application to the tubers.

**Application**

<table>
<thead>
<tr>
<th>Application Method</th>
<th>Diseases</th>
<th>Use Rate Fl Oz</th>
<th>Remarks</th>
</tr>
</thead>
</table>
| In-Line Aqueous Spray   | Silver scurf                  | 0.6 fl oz/ton of tubers | - Ensure proper coverage of the tubers. Tubers should be tumbling as they are treated.  
                          | Fusarium dry rot              |                | – Mix the fungicide solution in an appropriate amount of water for the crop being treated.  
                          | Late blight                   |                | – Use T-jet, CDA, or similar application system.                      |
|                         | Pink rot                      |                |                                                                        |

Do not make more than 1 post-harvest application to the tubers.

**Storage and Disposal**

**Prohibitions:** Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited.

**Pesticide Storage:** Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, mop and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

**Pesticide Disposal:** Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

**Nonrefillable Container:** Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinseate). After emptying and cleaning, it may be allowable to temporarily hold rinseate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact The Agricultural Container Recycling Council (ACRC) at www.acrecycle.org. If not recycled, then puncture and dispose of the container in a sanitary landfill, or incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

For packages up to 5 gallons: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. For packages greater than 5 gallons and less than 56 gallons: Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

For packages greater than 56 gallons: To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing procedure two more times.

For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC – 1-800-424-9300.
CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

BEFORE BUYING OR USING THIS PRODUCT, read the entire Directions for Use and the following Conditions of Sale and Limitation of Warranty and Liability. By buying or using this product, the buyer or user accepts the following Conditions of Sale and Limitation of Warranty and Liability, which no employee or agent of LOVELAND PRODUCTS, INC. or the seller is authorized to vary in any way.

Follow the Directions for Use of this product carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop or other plant injury, ineffectiveness, or other unintended consequences may result from such risks as weather or crop conditions, mixture with other chemicals not specifically identified in this product's label, or use of this product contrary to the label instructions, all of which are beyond the control of LOVELAND PRODUCTS, INC. and the seller. The buyer or user of this product assumes all such inherent risks.

Subject to the foregoing inherent risks, LOVELAND PRODUCTS, INC. warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use when the product is used in strict accordance with such Directions for Use under normal conditions of use. EXCEPT AS WARRANTED IN THIS LABEL AND TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THIS PRODUCT IS SOLD "AS IS," AND LOVELAND PRODUCTS, INC. MAKES NO OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR EligIBILITY OF THIS PRODUCT FOR ANY PARTICULAR TRADE USAGE.

IN THE UNLIKELY EVENT THAT BUYER OR USER BELIEVES THAT LOVELAND PRODUCTS, INC. HAS BREACHED A WARRANTY CONTAINED IN THIS LABEL AND TO THE EXTENT REQUIRED BY APPLICABLE LAW, BUYER OR USER MUST SEND WRITTEN NOTICE OF ITS CLAIM TO THE FOLLOWING ADDRESS: LOVELAND PRODUCTS, INC., ATTENTION: LAW DEPARTMENT, P.O. BOX 1286, GREELEY, CO 80632-1286.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE BUYER'S OR USER'S EXCLUSIVE REMEDY FOR ANY INJURY, LOSS, OR DAMAGE RESULTING FROM THE HANDLING OR USE OF THIS PRODUCT, INCLUDING BUT NOT LIMITED TO CLAIMS OF BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, STRICT LIABILITY, OR OTHER TORTS, SHALL BE LIMITED TO ONE OF THE FOLLOWING, AT THE ELECTION OF LOVELAND PRODUCTS, INC. OR THE SELLER: DIRECT DAMAGES NOT EXCEEDING THE PURCHASE PRICE OF THE PRODUCT OR REPLACEMENT OF THE PRODUCT. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, LOVELAND PRODUCTS, INC. AND THE SELLER SHALL NOT BE LIABLE TO THE BUYER OR USER OF THIS PRODUCT FOR ANY CONSEQUENTIAL, SPECIAL, OR INDIRECT DAMAGES, OR DAMAGES IN THE NATURE OF A PENALTY.
