Supplemental Labeling

Dow AgroSciences LLC 9330 Zionsville Road Indianapolis, IN 46268-1054 USA

Enable® 2F
EPA Reg. No. 62719-416

This supplemental labeling expires on July 3, 2016, and must not be used or distributed after this date.

**Disease Control in Peppers**

ATTENTION
- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Enable® 2F fungicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Enable 2F according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Enable 2F.

Directions for Use

Peppers including bell pepper, chili pepper, cooking pepper, pimento, and sweet pepper

Refer to product label for Enable 2F for Mixing and Application Directions.

| cercospora leaf spot powder mildew | 6 - 12 (0.094 - 0.188 lb active) | **Begin applications when disease is first observed.** Reapply 10 to 14 days later or as necessary for the level of disease pressure present. Apply uniformly in a spray volume that assures thorough coverage of the crop. A minimum spray volume of 30 gallons per acre is necessary. Disease control may be reduced at low spray volumes or if spray coverage is inadequate. For optimal disease control, apply as a ground application. Aerial application is permitted; however, disease control may be reduced when product is applied by air. For optimum performance, add a nonionic surfactant to the solution. | - Do not apply more than 12 fl oz of Enable 2F per acre per application or more than a total of 48 fl oz of Enable 2F (0.75 lb active) per acre per crop.  
- Do not make more than 2 consecutive applications of Enable 2F. Alternate within 14 days with a product that is effective on the target pathogen and has a different mode of action than Enable 2F.  
- Preharvest Interval: Do not apply within 7 days of harvest.  
- Minimum Re-Treatment Interval: 10 days  
- Chemigation: Do not apply this product through any type of irrigation system. |
Resistance Management
Enable 2F belongs to the sterol demethylation inhibitor (DMI) class of fungicides or target site of action Group 3 fungicide. Since certain fungi can develop resistance to this class of products, use Enable 2F as part of a resistance management strategy that includes alternation and/or mixing with fungicides of different target site of action. Consult your local or state agricultural authorities for resistance management strategies that are appropriate for your disease management program.

Plantback Intervals
Plantback intervals (PBI) for crops without primary label uses (such as rotational crops), where the last application of the product is <0.188 lb active per acre, the PBI must be 35 days. Where the last application of the product is 0.2 to 1 lb active per acre, the PBI must be 210 days.
