Supplemental Label

Captain®
LIQUID COPPER ALGAECIDE

EPA Reg. No. 67690-9

This supplemental label expires on 12/06/16 and must not be used or distributed after this date.

This supplemental labeling in addition to the product label or the container must be in the possession of the user at the time of application.

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read the entire label affixed to the container and supplemental label before applying. Use of Captain Liquid Copper Algaecide according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for Captain.

Attention: the updated label language includes the following:

TANK MIXES WITH OTHER AQUATIC ALGAECIDES AND HERBICIDES

Captain may be mixed with other herbicides or algaecides registered for aquatic use provided that no labeling prohibits such mixing. Captain can be tank mixed with other herbicides to improve efficacy; and to control algae in areas where heavy algae growth may cover target submersed plant species and interfere with herbicide exposure. Do not exceed any labeled rate or dose of any of the products in the combination. Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures. To ensure compatibility, a jar test is recommended before field application of any tank mix combination. It is recommended to consult with SePRO Corporation for latest tank mix recommendations.

NOTE: Tank mixing or use of Captain with any other product which is not specifically listed on the Captain label shall be at the exclusive risk of the user, applicator and/or application adviser, to the extent allowed by applicable law.

Captain and Endothall

Captain may be applied as a tank mix or simultaneously injected or used with the dipotassium salt of endothall (e.g. Cascade®) or the mono (N,N-dimethylalkylamine) salt of endothall (e.g. Teton®) to broaden the weed control spectrum and/or reduce injection times or rates in canals, ditches, and laterals. In flowing canals, apply Captain via drip or injection at a rate of 0.1 to 1.0 ppm in conjunction with Teton (0.05 – 2.0 ppm) or Cascade (0.35-3.0 ppm) for a minimum of one hour.

Hydrilla Control – Captain + Diquat Tank Mix

Captain can be mixed with diquat (diquat dibromide) in a 2:1 ration of Captain:Diquat (e.g. 4 gallons Captain and 2 gallons diquat [e.g. Littora®- 2 lbs a.i./gallon] per acre in waters with average depth of 4 feet). Lower rates of Captain may also enhance the activity of diquat. Captain should be applied at a minimum of 0.1 ppm in combination with diquat. Higher rates may be needed in areas with dense weeds.
