Supplemental Label

Captain® XTR
LIQUID COPPER ALGAECIDE

EPA Reg. No. 67690-9

This supplemental label expires on 12/06/16 and must not be used or distributed after this date.

This supplemental labeling in addition to the product label or the container must be in the possession of the user at the time of application.

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Read the entire label affixed to the container and supplemental label before applying. Use of Captain XTR Liquid Copper Algaecide according to this labeling is subject to the use precautions and limitations imposed by the label affixed to the container for Captain XTR.

Attention: the updated label language includes the following:

TANK MIXES WITH OTHER AQUATIC ALGAECIDES AND HERBICIDES

Captain XTR may be mixed with other herbicides or algaecides registered for aquatic use provided that no labeling prohibits such mixing. Captain XTR can be tank mixed with other herbicides to improve efficacy; and to control algae in areas where heavy algae growth may cover target submersed plant species and interfere with herbicide exposure. Do not exceed any labeled rate or dose of any of the products in the combination. Observe the most restrictive of the labeling limitations and precautions of all products used in mixtures. To ensure compatibility, a jar test is recommended before field application of any tank mix combination. It is recommended to consult with SePRO Corporation for latest tank mix recommendations.

NOTE: Tank mixing or use of Captain XTR with any other product which is not specifically listed on the Captain XTR label shall be at the exclusive risk of the user, applicator and/or application adviser, to the extent allowed by applicable law.

Captain XTR and Endothall

Captain XTR may be applied as a tank mix or simultaneously injected or used with the dipotassium salt of endothall (e.g. Cascade®) or the mono (N,N-dimethylalkylamine) salt of endothall (e.g. Teton®) to broaden the weed control spectrum and/or reduce injection times or rates in canals, ditches, and laterals. In flowing canals, apply Captain XTR via drip or injection at a rate of 0.1 to 1.0 ppm in conjunction with Teton (0.05 – 2.0 ppm) or Cascade (0.35-3.0 ppm) for a minimum of one hour.

Hydrilla Control – Captain XTR + Diquat Tank Mix

Captain XTR can be mixed with diquat (diquat dibromide) in a 2:1 ration of Captain XTR:Diquat (e.g. 4 gallons Captain XTR and 2 gallons diquat [e.g. Littora® - 2 lbs a.i./gallon] per acre in waters with average depth of 4 feet). Lower rates of Captain XTR may also enhance the activity of diquat. Captain XTR should be applied at a minimum of 0.1 ppm in combination with diquat. Higher rates may be needed in areas with dense weeds.
