PT® Alpine® Foam

KILLS: Termites (including subterranean and drywood), Wood Destroying Insects (Powder Post Beetles, Old House Borer, Wharf Borer), Ants (including: Argentine, Argentine Carpenter, Ghost, Pharaoh, White Footed), Earwigs, and Silverfish

USE RESTRICTIONS
- Kills pests on contact. Pest must be directly contacted at time of application in order for treatment to be effective.
- For termite control, this product is not a substitute for mechanical alteration, soil or foundation treatment.
- Do not apply in airplane.
- Do not apply to institutional uses (including day-care centers, libraries, sporting facilities, etc.), in human habitations, or in places where occupants are present.

PRODUCT INFORMATION
- This product is a ready-to-use insecticide formulation containing dinoterbin. When dispensed, the formulation rapidly expands to fill air spaces and offer maximum protection. Use a pump sprayer. The total concentration of active ingredients is a maximum of 0.02% dinoterbin. One pump of the container delivers an average of 0.31 mg of dinoterbin per liter of air. The concentration is 1:1000 for both the water-based and oil-based products.

APPLICATION DIRECTIONS
- Do not apply to walls, ceilings, or anywhere other than in areas that can be covered by the spray pattern of the pump sprayer. The application should be directed at the area to be treated, not at the insect itself. The formulation should not be applied to food or water. It is not necessary to prepare a rinse to apply the product. The spray should be directed at the walls, ceilings, and other surfaces where the insect is likely to be found. The spray should be applied in the form of a fine mist, not a fog or cloud. The spray should be applied in such a way that it will be effective in killing the insects that are present or that may invade the treated area. The spray should not be applied to surfaces where the insect is likely to be found. The spray should be applied in the form of a fine mist, not a fog or cloud. The spray should be applied in such a way that it will be effective in killing the insects that are present or that may invade the treated area.
