Basagran® 5L
Herbicide

For postemergence use in alfalfa grown for seed production, beans, clover grown for seed, corn, peanut, peas, peppermint, rice, sorghum, soybean, and spearmint

Active Ingredient:
sodium salt of bentazon* .................................................. 53.0%
Other Ingredients: ................................................................ 47.0%
Total: .................................................................................. 100.0%
* Equivalent to 5.0 pounds per gallon bentazon [3-(1-methylethyl)-1H,2,1,3-benzothiadiazin-4(3H)-one 2,2-dioxide] formulated as a soluble liquid

EPA Reg. No. 7969-112
EPA Est. No. 241-MO-001

KEEP OUT OF REACH OF CHILDREN
DANGER/PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand this label, find someone to explain it to you in detail.)

FIRST AID: If in eyes: Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes. Call a poison control center or doctor for treatment advice. If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice. If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. DO NOT induce vomiting unless told to do so by a poison control center or doctor. DO NOT give anything to an unconscious person.

HOTLINE NUMBER: Have the product container or label with you when calling a poison control center or doctor or going for treatment. In case of emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357). NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.

See inside for complete Precautionary Statements, Directions For Use, Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

Net Contents: 2.5 gallons

Product of Germany; formulated in the U.S. with U.S and imported ingredients.

BASF Corporation

Research Triangle Park, NC 27709

81078452 NVA 2017-05-033-0071

Group 6 Herbicide
Precautionary Statements

Hazards to Humans and Domestic Animals

DANGER. Corrosive. Causes irreversible eye damage. DO NOT get in eyes or on clothing. Avoid contact with skin. Harmful if swallowed or absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Waterproof gloves
- Shoes plus socks
- Protective eyewear (goggles, face shield, safety glasses)

Follow the manufacturer's instructions for cleaning and maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. DO NOT reuse them.

Environmental Hazards

For terrestrial uses, DO NOT apply directly to water, or to areas where surface water is present, or to tidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwater or rinsate.

Bentazon, the active ingredient in this product, is known to leach through soil into groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

It is a violation of federal law to use any pesticide in a manner that results in the death of an endangered species or in adverse modification of their habitat.

Agricultural Use Requirements

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

DO NOT enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 48 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical-resistant gloves such as barrier laminate, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, or viton ≥ 14 mils
- Shoes plus socks
- Protective eyewear

User Safety Recommendations

Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Storage and Disposal

DO NOT contaminate water, food, or feed by storage or disposal.

Pesticide Storage

Wastes resulting from this product must be disposed of on-site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or rinsate is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling

Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Triple rinse containers small enough to shake (capacity ≤ 5 gallons) as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

Basagran® 5L herbicide. Use of Basagran SL not consistent with this label can result in injury to crops, animals, or persons. Keep containers closed to avoid spills and contamination.
STORAGE AND DISPOSAL (continued)

In Case of Emergency
In case of large-scale spill of this product, avoid contact, isolate area, and keep out animals and unprotected persons. Contain spill and call:
- CHEMTREC 1-800-424-9300
- BASF Corporation 1-800-832-HELP (4357)

In case of medical emergency regarding this product, call:
- Your local doctor for immediate treatment.
- Your local poison control center (hospital).
- BASF Corporation 1-800-832-HELP (4357)

Steps to take if this material is released or spilled:
- Decontaminate equipment with clean water.
- Do not use water transport if this container is damaged or leaking. If the container is damaged, drain it over a container or into a drain, if possible.
- Do not transport if this container is damaged or leaking. If the container is damaged, drain it over a container or into a drain, if possible.
- Clean up spilled material, including packing materials. Do not flush into sewers or drains.
- Do not contaminate water supplies.
- Do not contaminate water supplies.
- Do not contaminate water supplies.
- Do not contaminate water supplies.

Container Handling (continued)
Triple rinse containers too large to shake (capacity > 5 gallons) as follows:
- Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinseate into application equipment or a mix tank, or store rinseate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows:
- Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Refillable Container:
- Refill this container with pesticide only. DO NOT reuse this container for any other purpose. Triple rinse the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

Triple rinse as follows:
- To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing procedure two more times.

When this container is empty, replace the cap and seal all openings that have been opened during use; return the container to the point of purchase, or to a designated location. This container must only be refilled with a pesticide product. Prior to refilling, inspect carefully for damage such as cracks, punctures, abrasions, worn-out threads and closure devices. Check for leaks after refilling and before transport. DO NOT transport if this container is damaged or leaking. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair.

Containers handled for refilling must be properly cleaned before final disposal. Containers, for all purposes, may be disposed of in the same manner as containers that are not refillable.

In Case of Emergency
In case of large-scale spill of this product, avoid contact, isolate area, and keep out animals and unprotected persons. Contain spill and call:
- CHEMTREC 1-800-424-9300
- BASF Corporation 1-800-832-HELP (4357)

In case of medical emergency regarding this product, call:
- Your local doctor for immediate treatment.
- Your local poison control center (hospital).
- BASF Corporation 1-800-832-HELP (4357)

Steps to take if this material is released or spilled:
- Decontaminate equipment with clean water.
- Do not use water transport if this container is damaged or leaking. If the container is damaged, drain it over a container or into a drain, if possible.
- Do not transport if this container is damaged or leaking. If the container is damaged, drain it over a container or into a drain, if possible.
- Clean up spilled material, including packing materials. Do not flush into sewers or drains.
- Do not contaminate water supplies.
- Do not contaminate water supplies.
- Do not contaminate water supplies.
- Do not contaminate water supplies.

Container Handling (continued)
Triple rinse containers too large to shake (capacity > 5 gallons) as follows:
- Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinseate into application equipment or a mix tank, or store rinseate for later use or disposal. Repeat this procedure two more times.

Pressure rinse as follows:
- Empty the remaining contents into application equipment or mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank, or collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

Refillable Container:
- Refill this container with pesticide only. DO NOT reuse this container for any other purpose. Triple rinse the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

Triple rinse as follows:
- To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing procedure two more times.

When this container is empty, replace the cap and seal all openings that have been opened during use; return the container to the point of purchase, or to a designated location. This container must only be refilled with a pesticide product. Prior to refilling, inspect carefully for damage such as cracks, punctures, abrasions, worn-out threads and closure devices. Check for leaks after refilling and before transport. DO NOT transport if this container is damaged or leaking. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair. If the container is damaged, do not return to the point of purchase without proper repair.

Containers handled for refilling must be properly cleaned before final disposal. Containers, for all purposes, may be disposed of in the same manner as containers that are not refillable.

Product Information
Basagran® 5L herbicide is intended for selective postemergence control of certain broadleaf weeds and sedges in alfalfa grown for seed, beans, clover grown for seed, corn, peanut, peas, peppermint, rice, sorghum, soybean, and spearmint. Basagran 5L does not control grasses.

Mode of Action
Basagran 5L is a benzothiadiazinone herbicide and a photosynthesis PS II inhibitor belonging to the herbicide mode-of-action Group 6 (WSSA)/Group C3 (HRAC). Basagran 5L is effective mainly through contact action; therefore, weeds must be thoroughly covered with spray.

Crop Tolerance
All labeled crops are tolerant to Basagran 5L. Leaf speckling or bronzing may occur, but plants generally outgrow this condition within 10 days. New growth is normal and crop vigor is not reduced.

Application Instructions
Apply Basagran 5L postemergence to small, actively growing weeds early in the season for the most effective control as broadcast, band, or spot spray applications. Delaying application permits weeds to exceed the specified maximum size and will prevent adequate control. Apply the specified rates of Basagran 5L to actively growing weeds before they reach the maximum sizes listed in Table 1, Table 3, and Table 4. When applying Basagran 5L sequentially, wait a minimum of 5 days before re-treatment.

Rainfast period - Rainfall or overhead irrigation within 4 hours after application may reduce the effectiveness of Basagran 5L.

Irrigation
In irrigated areas, it may be necessary to irrigate before treatment to ensure active weed growth because weeds growing under drought conditions usually are not satisfactorily controlled.

Spray Coverage
Thorough spray coverage is required for optimum control of emerged weeds. Dense leaf canopies shelter smaller weeds and can prevent adequate spray coverage. Early season application to small weeds makes thorough spray coverage easier to obtain.

Cultivation
DO NOT cultivate within 5 days before applying or within 7 days after applying Basagran 5L. Timely cultivation after 7 days may help provide season-long weed control.

Application Methods and Equipment
Avoiding spray drift at the application site is the responsibility of the applicator. The spray system and weather-related factors determine the potential for spray drift. The applicator is responsible for considering these factors when making application decisions to avoid spray drift onto nontarget areas.
Aerial Application
Use a minimum spray volume of 5 gallons of water per acre. To obtain uniform coverage and to reduce the potential of spray drift to nontarget areas from aerial application, the following measures must be followed:

- **Boom Length** - The distance of the outermost nozzles on the boom must not exceed 3/4 the length of the fixed wingspan or 90% of rotor-blade diameter.
- **Nozzle Type** - Use low-drift straight stream nozzles (D-8 or larger).
- **Nozzle Orientation** - Nozzles must always point backward parallel with the airstream and never be pointed downward more than 45 degrees.
- **Application Height** - Without compromising aircraft safety, apply at a height of 10 feet or less above the crop canopy or tallest plants.
- **DO NOT** apply when wind speed is greater than 10 miles per hour, or during periods of temperature inversions or stable atmospheric conditions.
- **DO NOT** apply Basagran® 5L herbicide by air if sensitive crop species (such as cotton, sugar beet, sunflower, or okra) are within 200 feet downwind.

Ground Application
Use a minimum spray volume of 10 gallons of water per acre to ensure adequate spray coverage. Use higher spray volume (up to 20 gallons of water per acre) to improve spray coverage when crop and weed foliage is dense. Apply using spray nozzles that deliver medium-to-coarse spray droplets as defined by ASABE standard S-572.1 and as shown in the nozzle manufacturer’s spray catalogs. **DO NOT** use flood, whirl chamber, or controlled droplet applicator (CDA) nozzles or selective application equipment such as recirculating sprayers or wiper applicators. **DO NOT** use brass nozzles because of the corrosive effects of nitrogen additives.

Cleaning Spray Equipment
Clean application equipment thoroughly by using a strong detergent or commercial sprayer cleaner according to the manufacturer’s directions, followed by triple rinsing the equipment before and after applying Basagran 5L.

*For Basagran SL use rates and weeds controlled in rice, refer to Table 3. Application Rates and Weeds Controlled in Rice - Flooded Fields and Table 4. Application Rates and Weeds Controlled in Rice - Drained Fields in the Crop-specific Information section.

**This rate not applicable in California.

1. **DO NOT** treat earlier than leaf stage shown, and **DO NOT** count cotyledon leaves.
2. **Use crop oil concentrate (COC) or COC plus urea ammonium nitrate (UAN).**
3. **For regrowth or new germination, a second application of Basagran SL may be necessary.**
4. **DO NOT** treat rosette before seed stalk appears.

*Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia - Make a second application 5 to 14 days later. For all other states, apply 1.6 to 2.4 pints of Basagran SL per acre to annual morning glory plants not larger than 4 true leaves. Control may be partial or inconsistent.
5. Always use UAN or ammonium sulfate (AMS) as spray additive.

6. **Basagran SL does not control black nightshade or Eastern black nightshade.**

7. **See the Special Directions for Problem Weeds section.**
**Special Directions for Problem Weeds**

**Field and Hedge Bindweed** - Kentucky, Illinois, Indiana, Michigan, and Ohio. Make a single application of 1.6 to 2.4 pints of Basagran 5L herbicide per acre when weeds are up to a maximum of 10-inches tall for suppression only.

**Canada Thistle** - Apply 1.2 to 1.6 pints of Basagran 5L per acre when weeds are from 8-inches tall to the bud stage. Make a second application at the same rate 7 to 10 days later. For control in California, apply 1.6 pints per acre and make second application 10 to 14 days later.

**Yellow Nutsedge** - Apply 1.2 to 1.6 pints of Basagran 5L per acre when weeds are up to a maximum of 8-inches tall. If regrowth occurs, make a second application at the same rate 7 to 10 days later. For control in California, apply 1.6 pints per acre and make second application 10 to 14 days later.

**Treatment for Late Rescue of Cocklebur** - Make a single application of 1.6 to 2.4 pints of Basagran 5L per acre to weeds up to 24-inches tall. For improved activity, apply 1.2 pints of Basagran 5L per acre initially, and repeat application 10 to 14 days later.

**Treatment for Late Rescue of Velvetleaf** - Make a single application of 2.4 pints of Basagran 5L per acre plus spray additives (an oil concentrate and UAN, refer to Additives section for more details) to weeds up to 12-inches tall. For improved activity, apply 1.2 pints of Basagran 5L per acre plus spray additives (an oil concentrate and UAN or AMS, refer to Additives section for more details), followed by a second application at the same rate in 5 to 7 days.

### Additives

To achieve consistent and optimum weed control, one of or a combination of the following additives listed in Table 2, Additive Rates must be added to the spray tank. Additives may cause some leaf burn, but new growth is normal and crop vigor is not reduced. The potential for leaf burn is increased when relative humidity and temperature are high. When an adjuvant (or a specific adjuvant product, such as a drift control agent) is to be used with this product, BASF recommends the use of a Chemical Producers and Distributors Association (CPDA) certified adjuvant. See Table 2, Additive Rates. Additives may be tank mixed with additives and/or one or more other pesticides (fungicides, herbicides, insecticides, or miticides), additives, or fertilizers not specified on this label. Physical incompatibility, reduced weed control, or crop injury may result from tank mixing. Users must follow the most restrictive directions for specific use rates, crop growth stage, weeds controlled and weed growth stage. Always perform a mixing test to check the compatibility of Basagran 5L with all potential tank mix partners. See Crop-specific Information for more details.

It is the pesticide user's responsibility to ensure that all products in the listed mixtures are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. Physical incompatibility, reduced weed control, or crop injury may result from mixing Basagran 5L with other pesticides (fungicides, herbicides, insecticides, or miticides), additives, or fertilizers not specified on this label.

### Compatibility Test with Oil Concentrate

Before mixing components, always perform a compatibility jar test. Use only water from the intended source at the source temperature. For a spray volume of 20 gallons per acre, use 3.3 cups (800 mL) of water. For other spray volumes, adjust proportionately. Add 2 teaspoons each of herbicide and oil concentrate for each 1.6 pints per acre of label rate.
Add components in the following sequence, gently mixing between additions:
1. Basagran® 5L herbicide
2. Tank mix product, if used
3. Oil concentrate
Cap jar, invert 10 cycles, let stand for 15 minutes.
Evaluate. An ideal tank mix combination will be uniform. The suitability of the oil concentrate is questionable if any of the following are observed:
• Free oil at the surface - Film or globules
• Flocculation - Fine particles which may be suspended in the liquid or found as a precipitated layer at the bottom of the jar
• Clarification - Thickening texture (coagulated) resembling yogurt or a curd-like texture as with cottage cheese

Mixing Order
Maintain constant agitation throughout mixing and application until spraying is complete.
1. Water - Fill tank 1/2 to 2/3 full with clean water and start agitation.
2. Inductor - If an inductor is used, rinse it thoroughly after each component has been added.
3. Emulsifiable concentrates (such as COC or MSO)
4. Water-dispersible products (including NIS, and nitrogen fertilizers such as AMS or UAN)
5. Water-soluble additives (such as dry flowables, wettable powders, suspension concentrates, or suspo-emulsions)
6. Water-soluble products (such as Basagran 5L)
7. Emulsifiable concentrates (such as OCC or MOS)
8. Remaining quantity of water

Application Restrictions
• Maximum seasonal use rate - DO NOT apply more than a total of 3.2 pints (2.0 pounds of bentazon) of Basagran 5L per acre, per season in all crops.
• DO NOT apply more than a total of 2.0 pounds of bentazon ai (from all sources) per acre, per season.
• DO NOT apply to weeds under stress such as lack of moisture, herbicide injury, mechanical injury, or cold temperatures, or unsatisfactory control may result.
• DO NOT apply to crops subjected to stress conditions such as hail damage, flooding, drought, injury from other herbicides, or widely fluctuating temperatures, or crop injury may result.
• DO NOT apply to crops that show injury (leaf phytotoxicity or plant stunting) produced by any other prior herbicide applications because this injury may be enhanced or prolonged.
• DO NOT apply through any type of irrigation system.

Crop-specific Information
This section provides use directions for Basagran 5L in specific crops. Read product information, mixing, application, weeds controlled, and additive instructions in the preceding sections of the label. It is the pesticide user’s responsibility to ensure that all products in the listed mixtures are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Alfalfa Grown for Seed
Seed alfalfa is tolerant to postemergence applications of Basagran 5L, however some leaf speckling, leaf bleaching or whitening, and temporary stunting may occur under certain conditions. Applications made at or after flower bud formation may reduce seed yields.
Apply Basagran 5L in the spring as a broadcast postemergence application at rates up to 1.6 pints per acre to alfalfa with at least 2 trifoliate leaves, but with no flower bud formation. If needed for additional control of troublesome weeds, make a second application 6 to 14 days later at the same use rate. The addition of oil concentrate (see Additives section for details) to Basagran 5L on seed alfalfa may result in slight leaf burn or temporary stunting, but at new growth is normal. The potential for leaf burn is increased when relative humidity and temperature are high. A few oil concentrates have exhibited excessive leaf burn. Refer to your supplier of Basagran 5L for information concerning successful local experience before purchasing any oil concentrate.

Crop-specific Restrictions
• DO NOT apply Basagran 5L if alfalfa shows injury (leaf phytotoxicity and/or plant stunting) produced by any other prior herbicide applications because this injury may be enhanced and/or prolonged.
• For use only in fields of alfalfa grown for seed production.
• DO NOT use on alfalfa produced for livestock feed.
• DO NOT use Basagran 5L-treated alfalfa seed for sprouting.

Special Crop Use Restrictions
The pesticide applicator, the producer of the crop, and the seed conditioner must be aware that use of this product according to this labeling is deemed a nonfeed/nonfood use. If the applicator of this pesticide is not the producer, the applicator must provide a copy of this labeling to the producer of the crop. Producers of this crop who use this product, or cause the product to be used on a field they operate, must provide a copy of this pesticide label to the seed conditioner.
This pesticide does not have an established pesticide residue tolerance for alfalfa. Consequently, no portion of this alfalfa seed crop, including but not limited to, forage or stubble, green chop, hay, pellets, meal, whole seed, cracked seed straw, or seed screenings, may be used or distributed for human food or animal feed purposes.
Any alfalfa seed from a field treated with this product must bear a specific tag or conspicuous container labeling, or if shipped in bulk, on the shipment invoice or bill of lading, with the following statement: “Not for human or animal consumption”. All seed screenings from seed processing shall be disposed of in such a manner that the screenings cannot be distributed or used for human food or animal feed purposes.

Beans, Dry and Succulent
Bean types tolerant to Basagran 5L are adzuki, black turtle soup, cranberry, laba/labwa, great northern, kidney, large lima, navy, pink, pinto, red, small lima, snap, and white beans.
Not for use on adzuki beans in California.
Apply Basagran® 5L herbicide to beans after the first trifoliate leaf has fully expanded. Even at the tolerant stages, yellowing, bronzing, speckling or burning of leaves may occur under certain conditions. This temporary injury is generally outgrown without delaying podset or maturity or reducing yield. Applying Basagran 5L with an oil concentrate (COC or MSO) may increase crop injury (i.e., increase leaf burn) and may reduce yields, especially for snap bean.

State-specific Instructions for Georgia and South Carolina. DO NOT apply Basagran 5L as a solo treatment to dry and succulent beans and snap beans or severe crop injury may occur. Basagran 5L may be applied from 4.8 to 12.8 fluid ounces per acre to dry and succulent beans and snap beans only when tank mixed with Raptor® herbicide or Pursuit® herbicide. Refer to the Raptor and Pursuit labels for additional use directions or restrictions.

Crop-specific Restrictions

• DO NOT apply Basagran 5L to beans before the first trifoliate leaf is fully expanded or severe crop injury may occur.
• DO NOT apply Basagran 5L to garbanzo beans or lupines at any stage of growth, or severe crop injury may occur.
• DO NOT apply Basagran 5L to dry or succulent beans within 30 days of harvest.

Tank Mixes

Basagran 5L may be tank mixed in dry beans with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Outlook® herbicide
- Poast® herbicide
- Pursuit
- Raptor
- clethodim
- Reflex® herbicide
- Varisto® herbicide

Basagran 5L may be tank mixed in succulent beans with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Poast
- Pursuit
- Raptor*
- clethodim
- Reflex (snap bean only)
- Varisto

*Only in states that Raptor is labeled for use on succulent lima bean and snap bean (see Raptor label)

Clove Grown for Seed

For use ONLY in Oregon and Washington.
Clover is tolerant to postemergence applications of Basagran 5L; however, some leaf burning may occur under certain conditions. Clover plants generally outgrow this condition within 10 days. Apply Basagran 5L in the spring as a broadcast postemergence application at rates up to 1.6 pints per acre. If needed for additional control of troublesome weeds, make a second application 5 to 14 days later at the same use rate.

Crop-specific Restrictions

• DO NOT graze livestock or harvest forage or hay for livestock feed for at least 90 days after treatment in Oregon and Washington.

Tank Mixes

Basagran 5L may be tank mixed in clover grown for seed with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Raptor
- Varisto

Corn

Apply Basagran 5L postemergence to corn (corn in this label refers to field, sweet, popcorn, and corn grown for seed or silage). Before applying Basagran 5L to seed corn, verify the selectivity of Basagran 5L on your inbred line with your local seed company (supplier) to help avoid potential injury to sensitive inbreds.

Crop-specific Restrictions

• DO NOT apply Basagran 5L to beans before the first trifoliate leaf has fully expanded or severe crop injury may occur. Basagran 5L may be applied from 4.8 to 12.8 fluid ounces per acre to dry and succulent beans and snap beans only when tank mixed with Raptor® herbicide or Pursuit® herbicide. Refer to the Raptor and Pursuit labels for additional use directions or restrictions.

Peppermint and Spearmint

Peppermint and spearmint are tolerant to Basagran 5L; however, some leaf burning may occur under certain conditions, such as when plants are growing very actively and have extensive new, succulent tissue. Mint plants generally outgrow this condition within 10 days.

Crop-specific Restrictions

• DO NOT apply Basagran 5L to peppermint or spearmint within 20 days of harvest.

Tank Mixes

Basagran 5L may be tank mixed in peppermint and spearmint with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Poast
- Buctril® herbicide
- Sinbar® herbicide
- Stinger® herbicide
Peas, Dry and Succulent

Pea types tolerant to Basagran® 5L herbicide are Austrian winter, dry field, garden, English, marrowfat, and southern peas. Not for use on black-eyed peas in California.

Tank Mixes

• Thistrol® herbicide
• Reflex® herbicide
• Pursuit® herbicide

Basagran® 5L may be tank mixed in peas with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

Pursuit® herbicide
Raptor® herbicide
MCPA

Tank mix of Basagran® 5L and Thistrol® is for use in the northeastern states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, and in the mid-Atlantic states of Delaware, Maryland, Virginia, and in the Pacific northwestern states of Idaho, Oregon, and Washington. Apply this tank mix after the 3-leaf stage (4-node stage) of peas, but not later than 3 nodes before pea flowering. DO NOT apply the tank mix to peas when temperatures exceed 90° F.

Cases where a tank mix may be used include UAN solution or AMS with the tank mix of Basagran® 5L and Gramoxone Inteon. DO NOT use an oil concentrate or any other oil-based additive with the tank mix of Basagran® 5L and Gramoxone Inteon. Basagran® 5L may be tank mixed with foliar fungicides such as Headline® SC fungicide and Priaxor® fungicide.

Tank Mix Restrictions

• DO NOT apply the tank mix to peas when temperatures exceed 90° F.
• DO NOT apply the tank mix to peas after pea flower buds appear.

Tank Mix Precautions

• Other crops, in particular beans, cotton, grapes, tomatoes, and ornamental plants, may be severely injured by off-target spray drift of Thistrol.
Alternate Flooding Culture
Arkansas, Louisiana, Mississippi, and Texas. Weed growth stages generally correspond to rice that is tillering (stooling) and occur before the permanent flood. Basagran® 5L herbicide must be applied when there is no water on the field and 24 hours or more before flooding. If Basagran 5L cannot be applied until after flooding, see directions under Continuous Flooding Culture.

Continuous Flooding Culture
In states using continuous flooding culture, or when treating after the permanent flooding, treatment must be made only when weeds are above the surface of the water. Weeds submerged at the time of application will not be adequately controlled. For early treatment, water may be partly or completely drained to expose more weed growth to spray applications of Basagran 5L. DO NOT raise water level for at least 24 hours after application or unsatisfactory control may result. DO NOT use ground equipment to apply to flooded fields because splashing will wash Basagran 5L off weed leaf surfaces and ineffective control may result.

Crop-specific Restrictions
• DO NOT use Basagran 5L on rice fields in which the commercial cultivation of catfish or crayfish is practiced.
• DO NOT use water containing Basagran 5L residues from rice cultivation to irrigate crops used for food or feed unless Basagran 5L is registered for use on these crops.
• DO NOT apply more than 3.2 pints of Basagran 5L per acre per season whether one or two rice crops (including ratoon) are grown that season.

Tank Mixes
Basagran 5L may be tank mixed in rice with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

• Beyond® herbicide
• Facet® L Herbicide
• Newpath® herbicide
• propanil
• Command® herbicide
• Grasp® herbicide
• League™ herbicide
• Londax® herbicide
• Permit® herbicide
• Permit Plus® herbicide
• RiceBeaux® herbicide
• Strada® herbicide
• Ultra Blazer® herbicide

Tank Mix Restrictions
• Apply the tank mix of Basagran 5L and Londax within 7 days of establishing permanent flood.
• Apply the tank mix of Basagran 5L and propanil only to drained fields.
• DO NOT use oil concentrate with the tank mix of Basagran 5L and propanil. Add propanil to the tank mix of Basagran 5L based on active ingredient (ai) of formulation used. Test propanil products for physical tank mix compatibility with Basagran 5L.

### Special Directions for Problem Weeds in Rice

#### Sorghum, Grain and Forage

Apply Basagran 5L postemergence to sorghum (sorghum in this label refers to grain and forage sorghum). Before applying Basagran 5L to sorghum, verify the selectivity of Basagran 5L on your inbred or hybrid line with your local seed company (supplier) to help avoid potential injury to sensitive inbreds and hybrids.

Not for use on forage sorghum in California.

**Crop-specific Restrictions**

- **DO NOT** apply more than 1.6 pints of Basagran 5L per acre per season in sorghum.
- **DO NOT** apply to sorghum that is heading or blooming.
- **DO NOT** graze treated sorghum fields for at least 12 days after the last treatment with Basagran 5L.

**Tank Mixes**

Basagran 5L may be tank mixed in sorghum with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Clarity® herbicide
- Facet® L herbicide
- Outlook® herbicide
- atrazine

#### Soybean

Apply Basagran 5L postemergence to soybean; soybean is tolerant to Basagran 5L at all stages of growth. Slight leaf speckling and leaf bronzing may occur under certain conditions, but soybean generally outgrows these conditions within 10 days.

**Crop-specific Restrictions**

- **DO NOT** graze or cut treated soybean fields for forage or hay for at least 30 days after the last treatment of Basagran 5L.

**Tank Mixes**

Basagran 5L may be tank mixed in soybean with one or more of the following herbicide products. Other tank mix products may be used, provided the product is registered for the intended use. Always follow the most restrictive language on the tank mix products’ labels.

- Outlook® herbicide
- Poast® herbicide
- Pursuit® herbicide
- Raptor® herbicide
- 2,4-DB amine
- glyphosate (e.g. Roundup® herbicide)
- Cobra® herbicide
- Flexstar® herbicide
- Reflex® herbicide
- Resource® herbicide
- Ultra Blazer® herbicide
- Varistro® herbicide
Basagran® 5L herbicide may be tank mixed with foliar fungicides and/or foliar insecticides (except malathion and Sevin® herbicide) if the application timings properly coincide. The tank mixing of an insecticide with Basagran 5L may increase the potential for crop injury.

**Tank Mix Restrictions**
- Basagran 5L, Ultra Blazer® herbicide, and Poast® herbicide. Oil concentrate must be used with the tank mix of Basagran 5L, Poast, and Ultra Blazer in place of a spray surfactant.
- Basagran 5L and 2,4-DB amine. Use only amine formulations of 2,4-DB. Use no other adjuvant except UAN at 2 to 4 pints per acre with this tank mix. DO NOT apply more than 1 application of this tank mix per season. The use of this tank mix will cause soybean foliage injury (such as burning, bronzing, or crinkling) and may reduce yields. DO NOT use this tank mix on soybeans that show symptoms of disease such as Phytophthora root rot.
- DO NOT apply tank mixes in California.

**Conditions of Sale and Warranty**

The Directions For Use of this product reflect the opinion of experts based on field use and tests. The directions are believed to be reliable and must be followed carefully. However, it is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or use of the product in a manner inconsistent with its labeling, all of which are beyond the control of BASF CORPORATION (“BASF”) or the Seller. To the extent consistent with applicable law, all such risks shall be assumed by the Buyer.

BASF warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes referred to in the Directions For Use, subject to the inherent risks, referred to above.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER’S EXCLUSIVE REMEDY AND BASF’S EXCLUSIVE LIABILITY, WHETHER IN CONTRACT, TORT, NEGLIGENCE, STRICT LIABILITY, OR OTHERWISE, SHALL BE LIMITED TO REPAYMENT OF THE PURCHASE PRICE OF THE PRODUCT.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BASF AND THE SELLER DISCLAIM ANY LIABILITY FOR CONSEQUENTIAL, EXEMPLARY, SPECIAL OR INDIRECT DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT.

BASF and the Seller offer this product, and the Buyer and User accept it, subject to the foregoing Conditions of Sale and Warranty which may be varied only by agreement in writing signed by a duly authorized representative of BASF.
Basagran® 5L
Herbicide

For postemergence use in alfalfa grown for seed production, beans, clover grown for seed, corn, peanut, peas, peppermint, rice, sorghum, soybean, and spearmint

Active Ingredient:
Sodium salt of bentazon* ........................................ 50.0%
Other Ingredients: .................................................. 47.0%
Total: ................................................................ 100.0%
* Equivalent to 5.0 pounds per gallon bentazon [3-(1-methylethyl)-1H,1,3-benzothiadiazin-4(3H)-one 2,2-dioxide] formulated as a soluble liquid

EPA Reg. No. 7969-112
EPA Est. No. 241-MO-001

KEEP OUT OF REACH OF CHILDREN
DANGER/PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

FIRST AID: If in eyes: Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes. Remove contact lenses, if present, after first 5 minutes; then continue rinsing eyes. Call a poison control center or doctor for treatment advice.

If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice.

If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. DO NOT induce vomiting unless told to do so by a poison control center or doctor. DO NOT give anything to an unconscious person.

HOTLINE NUMBER: Have the product container or label with you when calling a poison control center or doctor or going for treatment. In case of emergency endangering life or property involving this product, call day or night 1-800-832-HELP (4357). NOTE TO PHYSICIAN: Probable mucosal damage may contraindicate the use of gastric lavage.

See attached booklet for complete Precautionary Statements. Directions For Use. Conditions of Sale and Warranty, and state-specific crop and/or use site restrictions.

Net Contents: 2.5 gallons

Precautionary Statements
Hazards to Humans and Domestic Animals

DANGER. Corrosive. Causes irreversible eye damage. DO NOT get in eyes or on clothing. Avoid contact with skin. Harmful if swallowed or absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals.

Environmental Hazards

For terrestrial uses, DO NOT apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. DO NOT contaminate water when disposing of equipment washwater or rinsate.

Bentazon, the active ingredient in this product, is known to leach through soil into groundwater under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

It is a violation of federal law to use any pesticide in a manner that results in the death of an endangered species or in adverse modification of their habitat.

STORAGE AND DISPOSAL

DO NOT contaminate water, food, or feed by storage or disposal.

Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze. Pesticide Storage: DO NOT allow this product to freeze.

Pesticide Disposal: Wastes resulting from this product must be disposed of on-site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mix, or rinsate is a violation of federal law. If these wastes cannot be disposed of according to label instructions, contact the state agency responsible for pesticide regulation or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling: Nonrefillable Container. DO NOT reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying; then offer for recycling, if available, or reconditioning, if appropriate, or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities. Refillable Container. Refill this container with pesticide only. DO NOT reuse this container for any other purpose. Triple rinsing the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

See attached booklet for complete container handling directions including triple rinsing and pressure rinsing instructions.
