Medal® II EC

Herbicide

This supplemental label expires on November 1, 2016 and must not be used or distributed after this date.

Active Ingredient:
S-metolachlor (CAS No. 87392-12-9) ................................................................. 82.4%
Other Ingredients: 17.6%
Total: 100.0%

Medal II EC contains 7.64 lbs. of active ingredient per gallon.

Keep out of reach of children.

Caution

EPA Reg. No. 100-818

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed.

Before using Medal II EC as permitted according to this supplemental labeling, read and follow all applicable directions, restrictions, and precautions on the EPA registered label on or attached to the pesticide product container. This Supplemental Labeling contains revised use instructions and or restrictions that may be different from those that appear on the container label. This Supplemental Labeling must be in the possession of the user at the time of pesticide application. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
DIRECTIONS FOR USE

SOYBEANS – MEDAL II EC ALONE

Postemergence: Apply 1.0-1.33 pts./A as a postemergence treatment to soybeans from emergence up through the third trifoliate leaf stage. Medal II EC will not control emerged weeds so it must be applied to a weed-free soil surface or in a tank mixture with products that provide postemergence control of weeds present at the time of application.

Medal II EC can also be applied as part of a sequential soybean weed control program. If Medal II EC was applied as a preplant surface, preplant incorporated, or a preemergence treatment, a second treatment of Medal II EC can be applied postemergence provided that the total Medal II EC rate during any one crop does not exceed 2.5 pts./A.

Restrictions: To avoid possible illegal residues when Medal II EC is applied postemergence to soybeans: (1) Do not apply more than 1.33 pts./A postemergence. (2) The total Medal II EC rate applied preplant, preemergence or postemergence to soybeans during any one crop must not exceed 2.5 pts./A (2.4 lbs. a.i./A of S-metolachlor). (3) Make postemergence application at least 90 days before harvest. (4) Do not graze or feed treated forage or hay from soybeans to livestock following a postemergence application of Medal II EC.
