Active Ingredient:
Coal Tar Creosote (AWPA P2) ............................................. 98.0 %
CAS No. 8001-58-9
Inert Ingredients........................................................... 2.0 %
Total.................................................................................. 100.0 %

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION: Causes moderate eye irritation. Harmful if swallowed or absorbed through skin. Do not get in eyes, on skin, or on clothing. Wear protective eye wear (goggles, protective glasses, or face shield). Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Prolonged and repeated skin exposure over many years in the absence of recommended hygiene practices may lead to changes in skin pigmentation, benign skin growth and in some cases, result in skin cancer. The inhalation exposure limit for creosote vapor is 10 ppm. LNG (P 200) for a period of 1 hour. Prolonged or repeated inhalation exposure above the limit may lead to respiratory system effects such as inflammation and possibly changes in liver, thyroid and blood elements.

See back panel for additional precautions.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
All personnel handling treated wood or handling treating equipment (including poles/hooks used to retrieve charge cables) that has come into contact with preservative must wear the following PPE:
• Washable or disposable coveralls or long-sleeved shirt and long pants,
• Chemical resistant gloves,
• Socks plus industrial grade safety work boots with chemical resistant soles.

All personnel cleaning or maintaining the treatment cylinder gasket/equipment or working with concentrate or wood treatment preservative must wear the following PPE:
• Washable or disposable coveralls or long-sleeved shirt and long pants,
• Chemical resistant gloves,
• Socks plus industrial grade safety work boots with chemical resistant soles, and
• A full face shield.

In the event of equipment malfunction, or for door spacer placement, all personnel located within 15 feet of the cylinder opening prior to cylinder ventilation must wear the following PPE:
• Washable or disposable coveralls or long-sleeved shirt and long pants,
• Chemical resistant gloves,
• Socks plus industrial grade safety work boots with chemical resistant soles, and
• A properly fitting half mask elastomeric respirator with appropriate cartridges and/or filters.

Entry to confined spaces is regulated by Federal and/or State Occupational Safety and Health Programs. Compliance is mandated by law. Individuals who enter pressure treatment cylinders or other related equipment that is contaminated with the wood treatment preservative (e.g. cylinders that are not free of treatment preservative or preservative storage tanks) must wear protective clothing and/or equipment as required by Federal and/or State Occupational Safety and Health Compliance laws.

USER SAFETY REQUIREMENTS
Personnel must leave aprons, protective coveralls, chemical resistant gloves, work footwear, and any other material contaminated with preservative at the treatment facility.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Discard clothing and other absorbent material that have been drenched or heavily contaminated with the product's concentrate. Do not reuse them.

Eating, drinking, and smoking are prohibited in the treatment cylinder load-out area, drip pad area, and engineering control room of the wood treatment facilities. EXCEPTION: Where treating operator control rooms are isolated from the treating cylinders, drip pad, and work tanks, eating, drinking, and smoking (depending on local restrictions) are permitted.

ENVIRONMENTAL HAZARDS
This product is toxic to aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

DIRECTIONS FOR USE
RESTRICTED USE PESTICIDE
It is a violation of federal law to use this product in a manner inconsistent with its labeling. For terrestrial and aquatic nonfood wood/wood structure protection treatments via pressure methods for utility poles/cross arms, railroad ties, switch ties, bridge timbers, fence and guardrail posts, foundation timbers, marine and foundation round pines, sawn lumber and timber products, and exterior structural composite glue laminated wood and plywood products. Treated wood is intended for exterior/outdoor uses only.

Inert Ingredients

Coal Tar Creosote (AWPA P2) ........................................... 98.0 %
CAS No. 8001-58-9
Inert Ingredients............................................................. 2.0 %
Total ............................................................................. 100.0 %

CAUTION

See back panel for additional precautionary statements and complete Directions for Use

EPA Reg. No. 61470-3  EPA Est. No.  81091-CAN-001

FIRST AID

If in eyes
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If swallowed
• Call poison control center or doctor immediately for treatment advice.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person. Do not give any liquid to the person.

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If inhaled
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

ENVIRONMENTAL HAZARDS

This product is toxic to aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

DIRECTIONS FOR USE

RESTRICTED USE PESTICIDE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

For terrestrial and aquatic nonfood wood/wood structure protection treat ment facilities via pressure methods for utility poles/cross arms, railroad ties, switch ties, bridge timbers, fence and guardrail posts, foundation timbers, marine and foundation round piles, sawn lumber and timber products, and exterior structural composite glue laminated wood and plywood products. Treated wood is intended for exterior/outdoor uses only.

APPENDIX

to the current edition of the AWPA Book of Standards.

AWPA Commodity Specification: Poles

AWPA Use Category Commodity Examples

UC 4A, 4B, and 4C Utility poles (including laminated) Poles for highway and agricultural construction, lighting, building structural use

Note: poles may be glue- or mechanically-laminated

AWPA Commodity Specification: Piling

AWPA Use Category Commodity Examples

AWPA Commodity Specification Marine: (Salt Water/Brackish Water) Applications

AWPA Use Category Commodity Examples

UC 5A, 5B, and 5C Bulkhead sheathing Lumber/timbers use, including timbers, cross bracing, and highway construction Piles for marine applications Plywood for bridge and marine construction

Note: laminates can be glued or mechanically fastened

Note: PSL = parallel strand lumber, LVL = laminated veneer lumber

AWPA Commodity Specification: Wood Composites

AWPA Use Category Commodity Examples

UC 1, 2, and 3B Composite lumber for structural uses Glue- and nail-laminated structural members Plywood for agriculture, and farm use

UC 4A PSL & LVL composite lumber for highway construction members (laminates) Plywood for bridge and farm/agricultural use

UC 4B Plywood for marine use in salt water splash zones Plywood for road salt/brine storage, highway construction materials Composite lumber for bridge and highway construction Glue-laminate members (important structural or safety aspects) Composite (PSL & LVL) lumber highway structural use Members (laminates) for critical structural uses

AWPA Commodity Specification: Posts

AWPA Use Category Commodity Examples

UC 4A Posts, round, 1/2 and 1/4 round for highway construction (including guide, sign and sight) and farm fencing

UC 4B Posts, round, 1/2 and 1/4 round for highway construction (including guardrail posts, spacer blocks) and for road salt/brine storage Posts, round, 1/2 and 1/4 round for building construction Round posts, for structural members in agricultural uses

AWPA Commodity Specification: Cross ties and Switch Ties

AWPA Use Category Commodity Examples

UC 4A, 4B, and 4C Cross ties and Switch Ties, produced from all wood species recognized by AWPA for this commodity. Manufactured to meet AWPA specifications.

AWPA Commodity Specification: Crosses and Switch Ties

AWPA Use Category Commodity Examples

UC 4A, 4B, and 4C Cross ties and Switch Ties, produced from all wood species recognized by AWPA for this commodity. Manufactured to meet AWPA specifications.

Pesticide Storage: In case of spillage, absorb (with sand, earth, etc.) and dispose of in accordance with applicable Federal, State and local regulations. Contaminated materials must be handled and managed as a RCRA Hazardous Waste and treated before disposal in an approved landfill. This waste is identified by the EPA as a U051 hazardous waste and must meet the treatment standards specified in 40 CFR 268 Subpart D. A RCRA Hazardous Waste Storage permit is required for storage of wastes beyond 90 days. Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Pesticide Storage: In case of spillage, absorb (with sand, earth, etc.) and dispose of in accordance with applicable Federal, State and local regulations. Contaminated materials must be handled and managed as a RCRA Hazardous Waste and treated before disposal in an approved landfill. This waste is identified by the EPA as a U051 hazardous waste and must meet the treatment standards specified in 40 CFR 268 Subpart D. A RCRA Hazardous Waste Storage permit is required for storage of wastes beyond 90 days. Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

COAL TAR CREOSOTE P2 (cont.)

AWPA Commodity Specification: Sawn Products

AWPA Use Category Commodity Examples

UC 1, 2, and 3B Guardrails for highway construction, including for golf course bridges meeting highway construction standards

UC 4A Lumber/timber for highway construction, including for golf course bridges meeting highway construction standards Cross arms Fence rail (farm/agricultural only, round, ¼ round, ½ round)

UC 4B Highway bridge decking (above ground, structural, subject to critical/severe decay) Road salt/brine storage Highway construction materials, including cribbing, lighting Piles (structural support in residential or business construction) Posts (sawn 4 sides) for highway construction, farm/agricultural structural use, spacer blocks, important building structural use Poles for structural building use Lumber/timbers (5 inches or greater) structural use; highway construction and cribbing; retaining walls for highway uses; building support structures Lumber/ Timbers (2 x 8 inch and/or 3 x 6 inch or greater) for marine use (out of water, ground contact, including salt water splash zone)

UC 4C Piles for structural support

APPLICATION

Engineering Controls to be put in place as of December 31, 2013: For pressure treatment with creosote, automatic, remotely operated devices must be used to open, close, lock, and unlock cylinder doors. Mechanical methods must be used to place/remove bridge rails

General Instructions for Creosote Pressure Treatment:

• Cylinder openings and door pilts must use grating and additional measures such as sumps, dams or other devices which prevent or remove spillage of the preservative.

• Personnel must not directly handle the charge tables, poles or hooks used to retrieve charge cables, or other equipment that has contacted the preservative without wearing chemical resistant gloves.

• In the event of equipment malfunction, or to place the spacer to hold the door open during venting, only personnel wearing specified PPE are permitted within 15 feet of the cylinder opening prior to ventilation.

The Treatment Process:

• A final vacuum must be used to remove excess preservative from the wood. The final vacuum must attain a vacuum equal to or greater than the initial vacuum. This vacuum must be held for an appropriate time period based on wood species, retention levels, and commodity treated to remove excess preservative from the wood.

• After creosote treatment, wood must be moved to a drip pad capable of recovering excess preservative until the wood is drip free.

Post-Treatment Procedures:

Creosote-treated wood intended for use in aquatic or marine environments must be processed using one of the following alternative procedures, as determined by the treater:

• Expansion Bath – Following the pressure period, creosote should be heated from 10 - 20 degrees F. above press temperatures (consistent with the preservative and species temperature limitations set by AWPA) for a minimum of one hour. Pump creosote back to storage and apply a minimum vacuum of 22 inches of Hg (adjusted for location elevation) for a minimum of two hours.

• Steaming – Following the pressure period, and after the creosote has been pumped back to the work tank, a vacuum must be applied for a minimum of two hours at not less than 22 inches of Hg (adjusted for location elevation) to recover excess preservative. Release vacuum back to atmospheric pressure and steam for two hours for lumber and timbers and three hours for round piling. Maximum temperature during this process should not exceed 240 degrees F. Apply a second vacuum for a minimum of four hours at 22 inches of Hg (adjusted for location elevation).

• Double Vacuuming – Following the pressure period and after the creosote has been pumped back to the work tank, a vacuum must be applied for a minimum of one hour at not less than 22 inches of Hg (adjusted for location elevation) to recover excess preservative. Release vacuum back to atmospheric pressure and then follow with a second vacuum of not less than 22 inches of Hg (adjusted for location elevation) for a minimum period of three hours.

Ventilation Process (at conclusion of treatment) to be put in place as of December 31, 2013:

• The cylinder must be ventilated by purging the post-treatment cylinder through fresh air exchange. The ventilation process is considered complete after a minimum of 2 volume exchanges based on the empty treatment cylinder volume. The exhaust pipe of the vacuum system or any air moving device utilized in conducting the air purge must terminate into a containment vessel such as a treatment solution work tank or water/effluent tank.

• The ventilation process may be accomplished by one of the following methods: 1) activating an air purge system that operates while the cylinder door remains closed; or 2) using a device to open and hold open the cylinder door (no more than 6 inches) to allow adequate ventilation and activating the vacuum pump.

• If the second method is utilized, at the conclusion of the treatment, no personnel may be located within 15 feet of the cylinder when open (cracked) until the cylinder has been ventilated.

• After ventilation is complete, the cylinder door may be completely opened.

Supplemental Labeling for Creosote (P2) EPA Reg. No. 61470-3 Creosote (P2) is registered only for pressure treatment of wood. Wood treaters must not knowingly pressure treat wood commodities that are not encompassed by the following use category table, which provides examples from the American Wood Protection Association (AWPA) Use Category System, as set forth in the most current edition of the AWPA Book of Standards.
