| Pythium leak (Pythium spp.)     | 0.84 fl. oz. per 1,000 row feet | **In-Furrow:** Apply to row on a 6 to 8 inch band at planting in a minimum of 3 gallons of water per acre. Make application directly over the seed piece(s) prior to row closure. Use 11.6 fluid ounces per acre for 38 inch row spacing (13,756 linear feet per acre), 12.2 fluid ounces per acre for 36 inch row spacing (14,520 linear feet per acre), and 13 fluid ounces per acre for 34 inch row spacing (15,374 linear feet per acre). You may need to follow this in-furrow application with a foliar applied fungicide at tuber initiation:
  • When conditions are conductive for disease development.
  • When variety planted is susceptible or moderately susceptible (pink rot/Pythium leak).
  • In areas with a long growing season.

| Pink rot (Phytophthora erythroseptica) | 6.4 fl. oz. per acre. | **Pythium Leak and Pink Rot:** To control storage rot, make foliar applications. Begin at flowering and repeat after 14 days. Apply a third application 14 days after the second application to fields that have history of storage rot. Tank mix or premix this product with chlorothalonil or mancozeb when conditions favor foliar disease outbreaks. If foliar disease Do not harvest for 14 days after last application. |

- Do not use the “dribble” application method.
- Do not exceed 1.36 pints per acre per crop (0.34 lb a.i./A) of soil-applied mefenoxam and 1.6 pints per acre per crop (0.4 lb. a.i./A) of foliar-applied mefenoxam products per year.

NOTICE

Read the "WARRANTY DISCLAIMER" and "LIMITATION OF LIABILITY" in the label booklet for this product before using this product. Those terms apply to this supplemental labeling and if those terms are not acceptable, return the product unopened at once.
