Broad spectrum fungicide for control of plant diseases

Active Ingredient:
Azoxystrobin: methyl (E)-2-[2-[6-(2-cyanophenoxy)pyrimidin-4-oloxyl]phenyl]-3-methoxyacrylate* . . . . . . . . . . . 22.9%

Other Ingredients: 77.1%

Total: 100.0%

Contains 2.08 lb of active ingredient per gallon
*IUPAC

EPA Reg. No. 100-1098
EPA Est. 100-NE-001

KEEP OUT OF REACH OF CHILDREN.

CAUTION

See additional precautionary statements and directions for use inside booklet.

Reformulation is prohibited. See individual container labels for repackaging limitations.

SCP 1098C-L1E 1218

2.5 gallons
Net Contents
FIRST AID

If on skin or clothing
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment.

HOTLINE NUMBER
For 24-Hour Medical Emergency Assistance (Human or Animal)
Or Chemical Emergency Assistance (Spill, Leak, Fire or Accident)
Call
1-800-888-8372

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION
Harmful if absorbed through skin. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE)
Some materials that are chemically resistant to this product are listed below.
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
• Shoes plus socks

User Safety Requirements
Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS.
IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

User Safety Recommendations
Users should:
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Environmental Hazards
Azoxystrobin is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Azoxystrobin can be persistent for several months or longer.
For terrestrial uses: Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory
Azoxystrobin and a degradate of azoxystrobin are known to leach through soil to ground water under certain conditions as a result of label use. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

continued...
PRECAUTIONARY STATEMENTS (continued)

Surface Water Advisory
This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of azoxystrobin and a degradate of azoxystrobin from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

Notify State and/or Federal authorities and Syngenta immediately if you observe any adverse environmental effects due to use of this product.

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, LLC or Seller. To the extent permitted by applicable law, Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. To the extent permitted by applicable law: (1) this warranty does not extend to the use of the product contrary to label instructions or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and, (2) Buyer and User assume the risk of any such use. TO THE EXTENT PERMITTED BY APPLICABLE LAW, SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS WARRANTED BY THIS LABEL.

To the extent permitted by applicable law, in no event shall SYNGENTA be liable for any incidental, consequential or special damages resulting from the use or handling of this product. To the extent permitted by applicable law, TO THE EXTENT PERMITTED BY APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks
PRODUCT USE PRECAUTIONS

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR DISEASE CONTROL, AND/OR ILLEGAL RESIDUES.

POLLINATOR ADVISORY STATEMENT
This product may adversely impact the forage and habitat of local pollinators, including the monarch butterfly (and its larvae), birds, or bats if it reaches non-target areas. Protect pollinators by following label directions to minimize spray drift.

PRODUCT INFORMATION
Aframe is a broad spectrum, preventative fungicide with systemic and curative properties for the control of many important plant diseases. Aframe is a member of Syngenta’s Plant Performance™ product line and may also improve the yield and/or quality of the crop. These additional benefits are due to positive effects on plant physiology. The effects may vary according to factors including the crop, crop hybrid, or environment. Aframe may be applied as a foliar spray in alternating spray programs or in tank mixes with other registered crop protection products. All applications must be made according to the use directions that follow.

PRODUCT USE INSTRUCTIONS

Application: Thorough coverage is necessary to provide good disease control. Make no more spray solution than is needed for application. Avoid spray overlap, as crop injury may occur.

Adjuvants: When an adjuvant is to be used with this product, the use of an adjuvant that meets the standards of the Chemical Producers and Distributors Association (CPDA) adjuvant certification is advised.

Efficacy: Under certain conditions conducive to extended infection periods, use another registered fungicide for additional applications if maximum amount of Aframe has been used. If resistant isolates to Group 11 fungicides are present, efficacy can be reduced for certain diseases. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure, with highly susceptible varieties, or when environmental conditions are conducive to disease.

INTEGRATED PEST (DISEASE) MANAGEMENT
Integrate Aframe into an overall disease and pest management strategy whenever the use of a fungicide is required. Follow cultural practices known to reduce disease development, including selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters, and proper timing and placement of irrigation. Consult your local agricultural authorities for additional IPM strategies established for your area. Aframe may be used in State Agricultural Extension advisory (disease forecasting) programs which recommend application timing based on environmental factors favorable for disease development.

Crop Tolerance: Plant tolerance has been found to be acceptable for all crops on the label, however, not all possible tank-mix combinations have been tested under all conditions. When possible, test the combinations on a small portion of the crop to ensure that a phytotoxic response will not occur as a result of application. See Product Use Precautions for apple phytotoxicity information.

RESISTANCE MANAGEMENT

Aframe contains Azoxystrobin, a Group 11 fungicide. Any fungal population may contain individuals naturally resistant to Azoxystrobin and other Group 11 fungicides. A gradual or total loss of pest control may occur over time if these fungicides are used repeatedly on the same fields. Appropriate resistance-management strategies should be followed. Conform to resistance management strategies established for the crop and use area when using this product. Consult your local or State agricultural authorities for resistance management strategies that are complementary to those in this label.

Syngenta encourages responsible resistance management to ensure effective long-term control of the fungal diseases on this label.

Follow the crop specific resistance management specifications in the directions for use.
To delay fungicide resistance, take one or more of the following steps:

- Rotate the use of Azoxystrobin or other Group 11 fungicides (strobilurins, including pyraclostrobin and trifloxystrobin) within a growing season sequence with different fungicide groups that control the same pathogens.
- Use tank mixtures with fungicides from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
- Adopt an integrated disease management program for fungicide use that includes scouting, uses historical information related to pesticide use, and crop rotation, and which considers host plant resistance, impact of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide applications. Note that using predictive models alone is not sufficient to manage resistance.
- Monitor treated fungal populations for resistance development.
- Contact your local extension specialist or certified crop advisor for any additional pesticide resistance-management and/or IPM recommendations for specific crops and pathogens.
- For further information or to report suspected resistance contact Syngenta representatives at 1-800-334-9481 or visit the Fungicide Resistance Action Committee (FRAC) on the web at www.frac.info. You can also contact your pesticide distributor or university extension specialist to report resistance.

If there are no resistance management directions on the number of applications in the directions for use, then follow the directions in the table below.

<table>
<thead>
<tr>
<th>If planned total number of fungicide applications per crop is:</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
<th>8</th>
<th>9</th>
<th>10</th>
<th>11</th>
<th>12</th>
</tr>
</thead>
<tbody>
<tr>

<td>4</td>
<td>5</td>
<td>5</td>
<td>6</td>
<td></td>
</tr>
</tbody>
</table>

In situations requiring multiple sprays, develop season long spray programs for Group 11 (QoI) fungicides. In crops where two sequential Group 11 fungicide applications are made, alternate with two or more applications of a fungicide that is not in Group 11. If more than 12 applications are made, observe the following guidelines:

- When using a QoI fungicide as a solo product, the number of applications must be no more than \( \frac{1}{3} \) (33%) of the total number of fungicide applications per season.
- For QoI mixes in programs in which tank mixes or premixes of QoI with mixing partners of a different mode of action are utilized, the number of QoI containing applications must be no more than \( \frac{1}{2} \) (50%) of the total number of fungicide applications per season.
- In programs in which applications of QoI are made with both solo products and mixtures, the number of QoI containing applications must be no more than \( \frac{1}{2} \) (50%) of the total number of fungicide applications per season.

If a Group 11 fungicide is applied to the seed or soil, do not make another application with a Group 11 fungicide for at least 3 weeks.

**Rotational Crop Restrictions**

The following crops may be planted at the specified interval following application of Aframe fungicide.

**SOILBORNE/SEEDLING DISEASE CONTROL**

For those crops that have specific use directions for soilborne disease control:

Aframe can provide control of many soilborne diseases if applied early in the growing season. Specific applications for soilborne diseases include in-furrow applications and banded applications applied over the row, either shortly after plant emergence or during herbicide applications or cultivation. These applications will provide control of pre or postemergence damping off and diseases that infect plants at the soil-plant interface.

The use of either type of application depends on the cultural practices in the region. In some locations, one type of application may provide better disease control than the other, depending on the timing of the disease epidemic. Seedling diseases are generally controlled by in-furrow applications while banded applications are more effective against soilborne diseases that develop later in the season. Consult your local expert to get some guidance regarding application type. Under cool, wet conditions, crop injury from soil directed applications can occur.

**BANDED**

- Apply Aframe prior to infection as a directed spray to the soil, using single or multiple nozzles, adjusted to provide thorough coverage of the lower stems and the soil surface surrounding the plants.
- Limit band width to 7 inches or less.
• Apply Aframe at a rate of 0.40-0.80 fl oz product/1000 row feet (0.15-0.30 lb ai/A). For banded applications on 22-inch rows, the maximum application rate is 0.70 fl oz/1000 row feet (0.26 lb ai/A).
• These applications come into contact with the foliage and are counted as foliar applications when considering resistance management.
• They may be applied during cultivation or hillling operations to provide soil incorporation.

IN-FURROW
• Apply Aframe as an in-furrow spray in 3-15 gallons of water at planting.
• Mount the spray nozzle so the spray is directed into the furrow just before the seeds are covered.
• Use the higher rate when the weather conditions are expected to be conducive for disease development, if the field has a history of Pythium problems, or if minimum/low till programs are in place.

DRIP
Refer to the Application Instructions Through Irrigation System section.
PRODUCT USE RESTRICTIONS

- **DO NOT** use Aframe through airblast application equipment on grapes in the following townships and boroughs of Erie County, Pennsylvania: North East, Harborcreek, Lawrence Park, Erie, Presque Isle, Millcreek, Fairview, Girard and Springfield. This prohibition is intended to help eliminate phytotoxicity problems with apples observed in this geographic location.
- To help manage fungicide resistance, **DO NOT** use for commercial transplant production in the greenhouse except where specified on the label.

PHYTOTOXICITY

Aframe is extremely phytotoxic to certain apple varieties. AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to apple trees (and apple fruit).

- **DO NOT** spray Aframe where spray drift may reach apple trees.
- **DO NOT** use spray equipment which has been previously used to apply Aframe to spray apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple varieties.
- Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat.

SPRAY DRIFT MANAGEMENT

To avoid spray drift, do not apply when conditions favor drift beyond the target area. The interaction of many equipment and weather related factors determine the potential for spray drift. AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR AND THE GROWER.

<table>
<thead>
<tr>
<th>MANDATORY SPRAY DRIFT</th>
<th>Aerial Applications</th>
</tr>
</thead>
<tbody>
<tr>
<td>When applying aerially to crops, do not release spray at a height greater than 10 ft. above the crop canopy, unless a greater application height is necessary for pilot safety.</td>
<td></td>
</tr>
<tr>
<td>When applying to crops via aerial application equipment, the spray boom must be mounted on the aircraft so as to minimize drift caused by wing tip or rotor blade vortices. The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.</td>
<td></td>
</tr>
<tr>
<td>When applying to crops via aerial application equipment, applicators must use 1/2 swath displacement upwind at the downwind edge of the field.</td>
<td></td>
</tr>
<tr>
<td>Nozzles must be oriented so the spray is directed toward the back of the aircraft.</td>
<td></td>
</tr>
<tr>
<td>Do not apply when wind speeds exceed 10-15 miles per hour at the application site.</td>
<td></td>
</tr>
<tr>
<td>Do not apply during temperature inversions.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>When using ground application equipment, apply with nozzle height no more than 4 feet above the ground or crop canopy.</td>
</tr>
<tr>
<td>Do not apply when wind speeds exceed 10-15 miles per hour at the application site.</td>
</tr>
<tr>
<td>Do not apply during temperature inversions.</td>
</tr>
</tbody>
</table>

Azoxystrobin can affect non-target plant species outside the treatment area. To limit adverse effects to non-target plants, the applicator must avoid making applications when wind can facilitate off-site movement of azoxystrobin in the direction of areas such as forested areas, riparian areas, wetlands, and areas that serve as habitat for desirable and protected animal species.

SPRAY DRIFT ADVISORIES

The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all these factors when making application decisions.

IMPORTANCE OF DROPLET SIZE

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. The presence of sensitive species nearby, the environmental conditions, and pest pressure may affect how an applicator balances drift control and coverage. APPLYING LARGER DROPLETS REDUCES DRIFT POTENTIAL, BUT WILL NOT PREVENT DRIFT IF APPLICATIONS ARE MADE IMPROPERLY OR UNDER UNFAVORABLE ENVIRONMENTAL CONDITIONS! See Wind, Temperature and Humidity, and Temperature Inversions sections of this label.
Controlling Droplet Size – Groundboom

- **Volume** - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** - Use the lower spray pressures recommended for the nozzle. Higher pressure reduces droplet size and does not improve canopy penetration. **WHEN HIGHER FLOW RATES ARE NEEDED, USE A HIGHER-CAPACITY NOZZLE INSTEAD OF INCREASING PRESSURE.**
- **Nozzle Type** - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Considering using low-drift nozzles.

Controlling Droplet Size – Aircraft

- **Number of Nozzles** - Use the minimum number of nozzles with the highest flow rate that provide uniform coverage.
- **Nozzle Orientation** - Orienting nozzles so that the spray is emitted backwards, parallel to the airstream will produce larger droplets than other orientations. **AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.**
- **Nozzle Type** - Solid stream nozzles (such as disc and core with swirl plate removed) oriented straight back produce larger droplets than other nozzle types.
- **Boom Length** - Longer booms increase drift potential. Therefore, a shorter boom length is recommended.
- **Application Height** - Application more than 10 ft. above the canopy increases the potential for spray drift.

**BOOM HEIGHT**

- Setting the boom at the lowest referenced height (if specified) which provides uniform coverage reduces the exposure of droplets to evaporation and wind. For ground equipment, the boom must remain level with the crop and have minimal bounce.

**WIND**

- Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given wind speed. **AVOID APPLICATIONS DURING GUSTY OR WINDLESS CONDITIONS.**
- Note: Local terrain can influence wind patterns. Every applicator needs to be familiar with local wind patterns and how they affect spray drift.

**TEMPERATURE AND HUMIDITY**

- When making applications in hot and dry conditions, set up equipment to produce larger droplets to reduce effects of evaporation.

**TEMPERATURE INVERSIONS**

- Drift potential is high during a temperature inversion. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain close to the ground and move laterally in a concentrated cloud. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

**SHIELDED SPRAYERS**

- Shielding the boom or individual nozzles can reduce the effects of wind. However, it is the responsibility of the applicator to verify that the shields are preventing drift and not interfering with uniform deposition of the product.

**MIXING AND APPLICATION METHODS**

**Spray Equipment**

Aframe may be applied with all types of spray equipment commonly used for making ground and aerial applications. Proper adjustments and calibration of spraying equipment to give good canopy penetration and coverage is essential for good disease control.

**Nozzles**

- Equip sprayers with nozzles that provide accurate and uniform application.
- Ensure that nozzles are the same size and uniformly spaced across the boom.
- Calibrate sprayer before use.
- It is suggested that screens be used to protect the pump and to prevent nozzles from clogging.
- Ensure that screens placed on the suction side of the pump are 16-mesh or coarser.
- **DO NOT** place a screen in the recirculation line.
- Use 50-mesh or coarser screens between the pump and boom, and where required, at the nozzles.
- Check nozzle manufacturer’s directions.
Pump

- Use a pump with capacity to:
  
  (1) Maintain 35-40 psi at nozzles.
  
  (2) Provide sufficient agitation in tank to keep mixture in suspension - this requires recirculation of 10% of tank volume per minute.

- Use a jet agitator or liquid sparge tube for agitation.

- DO NOT air sparge.

For more information on spray equipment and calibration, consult sprayer manufacturers and state guidance. For specific local directions and spray schedules, consult the current state agricultural specifications.

Mixing Instructions

- Aframe is a suspension concentrate (SC) formulation.
- Prepare no more spray mixture than is required for the immediate operation.
- Thoroughly clean spray equipment before using this product.
- Agitate the spray solution before and during application.
- Rinse spray tank thoroughly with clean water after each day's use and dispose of pesticide rinsate by application to an already treated area.

Aframe Alone (No Tank Mix)

- Add 1/2-2/3 of the required amount of water to the spray or mixing tank.
- With the agitator running, add Aframe to the tank.
- Continue agitation while adding the remainder of the water.
- Begin application of the spray solution after Aframe has completely dispersed into the mix water.
- Maintain agitation until all of the mixture has been sprayed.

Aframe + Tank Mixtures: Aframe is usually compatible with all tank-mix partners listed on this label. To determine the physical compatibility of Aframe with other products, use a jar test. Using a quart jar, add the proportionate amounts of the products to 1 qt of water. Add wettable powders and water dispersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank.

Aframe has demonstrated some phytotoxic effects when mixed with products that are formulated as emulsifiable concentrates (EC). These effects are enhanced if applications are made under cool, cloudy conditions and these conditions remain for several days following application. In addition, adjuvants that contain some form of silicone have also contributed to phytotoxicity.

Mixing in the Spray Tank

- Add 1/2-2/3 of the required amount of water to the spray or mixing tank.
- With the agitator running, add the tank-mix partner(s) into the tank in the same order as described above.
- Allow the material to completely dissolve and disperse into the mix water. Continue agitation while adding the remainder of the water and Aframe to the spray tank.
- Allow Aframe to completely disperse.
- Spray the mixture with the agitator running.

Application Instructions Through Irrigation Systems (Chemigation)

Application Through Irrigation Systems (Chemigation)

- Use only on crops for which chemigation is specified on this label.
- Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems. Do not apply this product through any other type of irrigation system.
- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- Apply in 0.1-0.25 inches/acre. Excessive water may reduce efficacy.
- If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.
- DO NOT connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place.
- A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments when the need arises.

Spray Preparation: Thoroughly clean the chemical tank and injector system. Flush system with clean water.

Drip Irrigation: Aframe may be applied through drip irrigation systems for soilborne disease control. Ensure that the soil has adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, delay subsequent irrigation (water only) for at least 24 hours following drip application.
Sprinkler Irrigation

- Apply this product through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation systems.
- **DO NOT** apply this product through any other type of irrigation system except as specified on this label.
- Apply with center pivot or continuous-move equipment distributing 1/2 acre-inch or less during treatment.
- In general, use the least amount of water required for proper distribution and coverage.
- If stationary systems (solid set, handlines or wheel lines other than continuous-move) are used, inject this product into no more than the last 20-30 minutes of the set.
- **DO NOT** apply when winds are greater than 10-15 mph to avoid drift or wind skips.
- **DO NOT** apply when wind speed favors drift beyond the area intended for treatment.
- Plant injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform treated water.
- Thorough coverage of foliage is required for good control.
- Maintain good agitation during the entire application period.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.

**Operating Instructions**

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments when the need arises.
8. **DO NOT** connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

**Center Pivot Irrigation Equipment**

Notes: (1) Use only with drive systems which provide uniform water distribution. (2) Do not use end guns when chemigating Aframe through center pivot systems because of non-uniform application.

- Determine the size of the area to be treated.
- Determine the time required to apply 1/8-1/2 inch of water over the area to be treated when the system and injection equipment are operated at normal pressures as specified by the equipment manufacturer. When applying Aframe through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution. Run the system at 80-95% of the manufacturer's rated capacity.
- Using water, determine the injection pump output when operated at normal line pressure.
- Determine the amount of Aframe required to treat the area covered by the irrigation system.
- Add the required amount of Aframe and sufficient water to meet the injection time requirements to the solution tank.
- Make sure the system is fully charged with water before starting injection of the Aframe solution. Time the injection to last at least as long as it takes to bring the system to full pressure.
- Maintain constant solution tank agitation during the injection period.
- Continue to operate the system until the Aframe solution has cleared the sprinkler head.

**Solid Set, Hand Move, and Moving Wheel Irrigation Equipment**

- Determine the acreage covered by the sprinklers.
- Fill injector solution tank with water and adjust flow rate to use the contents over a 20 to 30-minute interval. When applying Aframe through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution.
- Determine the amount of Aframe required to treat the area covered by the irrigation system.
- Add the required amount of Aframe into the same quantity of water used to calibrate the injection period.
- Operate the system at the same pressure and time interval established during the calibration.
- Stop injection equipment after treatment is completed. Continue to operate the system until the Aframe solution has cleared the last sprinkler head.
**Specific Instructions for Public Water Systems**

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, back-flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, discharge the water from the public water system into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

**Directions For Use**

### Crop Target Diseases

- **Berries, Low Growing Subgroup 13-07G (except Cranberry)**
- **Strawberry**
- **Cranberry**

### Field Nurseries

- **Anthracnose**: (Colletotrichum fragariae)
- **Leather Rot**: (Phytophthora cactorum)
- **Powdery Mildew**: (Sphaerotheca macularis)
- **Suppression of Botrytis on the Foliage**: (Botrytis cinerea)

### Maximum Single Application Rate

- **6.0-15.5 fl oz/A (0.10-0.25 lb ai/A)**

### Application Instructions

Begin applications prior to disease development and continue throughout the season on a 7- to 10-day schedule, following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates.

For field rot control apply 2 applications on a 7-day schedule from late bloom through harvest.

**Field Nurseries**: Apply to young plants in field nurseries by ground, drip, or overhead chemigation.

If applying through drip irrigation, calculate the rate as a band application with a band width equal to the root zone width. Inject Aframe into the irrigation water.

For dip applications at transplanting for commercial berry production: For suppression of root and crown rot caused by Colletotrichum spp., mix 5.8 fl oz of Aframe per 100 gallons of water. Dip plants for 2-5 minutes. Plant treated plants as quickly as possible. It is advised that transplants be washed to remove excess soil prior to dipping. For continued anthracnose control, follow with foliar applications beginning 2-3 weeks after transplant.

Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Use Rate**  
- **0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet)**

**Application Instructions**

**For soilborne/seedling disease control, see directions and rates under the SOIL-BORNE/SEEDLING DISEASE CONTROL section.**

### Additional Low Growing Berries

- **Bearberry**, **Bilberry**, **Cloudberry**, **Muntries**, and **Partridgeberry** including all cultivars and/or hybrids of these.

### Specific Use Restrictions:

1) **Maximum Single Application Rate**: Do not exceed the maximum rate listed in the table.
2) **Minimum Application Interval**: 7 days
3) **Maximum Annual Rate**: Do not apply more than 60 fl oz of product/A/year.
4) Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
5) Pre-Harvest Interval (PHI): Aframe may be applied the day of harvest (0-day PHI).

### Soilborne Diseases

- **Seeding Root Rot**: (Lophodermium solani)
- **Basal Stem Rot**: (Rhizoctonia solani)

### Use Rate

- **6.0-15.5 fl oz/A (0.10-0.25)**

###Application Instructions

Begin applications at 5-10% bloom for fruit rot, cottonball, and twig blight. Continue applications on a 7- to 14-day schedule if conditions are favorable for disease development. Applications may be made by ground, chemigation or air.

Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

For dip applications at transplanting for commercial berry production:

**For suppression of root and crown rot caused by Colletotrichum spp., mix 5.8 fl oz of Aframe per 100 gallons of water. Dip plants for 2-5 minutes. Plant treated plants as quickly as possible. It is advised that transplants be washed to remove excess soil prior to dipping. For continued anthracnose control, follow with foliar applications beginning 2-3 weeks after transplant.**

Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**For soilborne/seedling disease control, see directions and rates under the SOIL-BORNE/SEEDLING DISEASE CONTROL section.**

### Additional Low Growing Berries

- **Bearberry**, **Bilberry**, **Blueberry**, **lowbush; Cloudberry; Lingonberry; Muntries; and Partridgeberry** including all cultivars and/or hybrids of these.

### Specific Use Restrictions:

1) **Maximum Single Application Rate**: Do not exceed the maximum rate listed in the table.
2) **Minimum Application Interval**: 7 days
3) **Maximum Annual Rate**: Do not apply more than 90 fl oz of product/A/year.
4) Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
5) Do not treat cranberry fields used for aquaculture of fish and crustaceae.
6) Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat. Use care in making applications near non-target aquatic habitats.
7) Do not apply to flooded crop.
8) Do not allow release of irrigation or flood water to non-target aquatic habitat for at least 14 days after the last application.
9) Pre-Harvest Interval (PHI): Do not apply within 3 days of harvest (3-day PHI).

### Use Rate

- **15.5 fl oz/A (0.25)**

###Application Instructions

Make the first application at bud break. Measure the ring diameter and add 10 feet to that diameter. Apply Aframe at a rate equivalent to 15.5 fl ozA in 30 – 100 gallons of water to the affected area. Irrigation (1 – 2 hours) following application is advisable to ensure penetration to the base of the plant. If necessary make another application 2 – 4 weeks later. For ground application ensure adequate water volume for thorough canopy penetration.

### Additional Low Growing Berries

- **Bearberry**, **Bilberry**, **Blueberry**, **lowbush; Cloudberry; Lingonberry; Muntries; and Partridgeberry** including all cultivars and/or hybrids of these.

continued...

Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 42 fl oz of product/A/year.
   a. Do not apply more than 0.75 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 2 applications per year at the high rate (15.5 fl oz/A) or 7 applications per year at the low rate (6.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Aframe may be applied the day of harvest (0-day PHI).

**Soilborne Diseases**
Seedling root rot, basal stem rot (Rhizoctonia solani)
| 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet) | For soilborne/seedling disease control, see directions and rates under the SOILBORNE/SEEDLING DISEASE CONTROL section.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 42 fl oz of product/A/year.
   a. Do not apply more than 0.75 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 2 applications per year at the high rate (15.5 fl oz/A) or 7 applications per year at the low rate (6.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Aframe may be applied the day of harvest (0-day PHI).
### Specific Use Restrictions:

1. **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2. **Minimum Application Interval:**
   - 14 days
3. **Maximum Annual Rate:**
   - Do not apply more than 24 fl oz of product/A/year.
   - Do not apply more than 0.45 lb ai/A/year of azoxystrobin-containing products.
4. **Pre-Harvest Interval (PHI):**
   - Do not apply within 30 days of harvest (30-day PHI).
   - Applications may be made by ground, air or chemigation. Use a minimum of 10 gallons of water per acre for ground applications.

   - Do not apply more than 0.45 lb ai/A/year of azoxystrobin-containing products.
4. **Pre-Harvest Interval (PHI):**
   - Do not apply within 30 days of harvest (30-day PHI).
   - Applications may be made by ground, air or chemigation. Use a minimum of 10 gallons of water per acre for ground applications.

**continued...**
### Carrots

**Target Diseases:**
- Cercospora leaf spot (Cercospora spp.)
- Early blight (Cercospora carotae)
- Late blight (Alternaria dauci)
- Powdery mildew (Erysiphe spp.)
- White mold (Sclerotium rolfsii)

**Application Instructions:**
- Begin applications prior to disease development and continue throughout the season every 7-14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates.
- Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Use Rate:** 9.0-15.5 fl oz product/A (0.15-0.25 lb ai/A)

### Soilborne Diseases

**Rhizoctonia root rot (Rhizoctonia solani):**
- 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet)

**Specific Use Restrictions:**
1. **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2. **Minimum Application Interval:** 7 days
3. **Maximum Annual Rate:** Do not apply more than 120 fl oz of product/A/year.
   - a. Do not apply more than 2.0 lb ai/A/year of azoxystrobin-containing products.
4. **Do not apply more than 6 applications per year at the high rate (20.0 fl oz/A) or 13 applications per year at the low rate (9.0 fl oz/A).**
5. **Pre-Harvest Interval (PHI):** Aframe may be applied the day of harvest (0-day PHI).

### Celery

**Target Diseases:**
- Early blight (Cercospora apii)
- Late blight (Septoria apicola)
- For additional diseases, see Leafy Vegetables.

**Application Instructions:**
- Begin applications prior to disease development and continue throughout the season every 7-14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates.
- Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Use Rate:** 9.0-15.5 fl oz product/A (0.15-0.25)

**Solborne Diseases**
- Rhizoctonia root rot (Rhizoctonia solani):
  - 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet)

**Specific Use Restrictions:**
1. **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2. **Minimum Application Interval:** 7 days
3. **Maximum Annual Rate:** Do not apply more than 90 fl oz of product/A/year.
   - a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
4. **Do not apply more than 5 applications per year at the high rate (15.5 fl oz/A) or 10 applications per year at the low rate (9.0 fl oz/A).**
5. **Pre-Harvest Interval (PHI):** Aframe may be applied the day of harvest (0-day PHI).

### Cereals

- *Barley*
- *Oats*
- *Rye*

**Target Diseases:**
- Kernel blight or black point (Alternaria spp.)
- (Cochliobolus sativus)
- Leaf rust (Puccinia graminis) (P. recondita)

**Application Instructions:**
- Apply prior to disease development. Protecting the flag leaf is important for maximizing disease control. For best results, sufficient water volume must be used to provide thorough coverage. Aframe can be applied by ground, air or chemigation. A crop oil concentrate adjuvant may be added at 1.0% v/v to optimize efficacy. For chemigation, apply in 0.1-0.25 inches/A of water. Chemigation with excessive water may lead to a decrease in efficacy.
- Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11. Do not make more than two (2) applications of Aframe or other Group 11 fungicides per season.

**Use Rate:** 6.0-12.0 fl oz (0.10-0.20)

**Specific Use Restrictions:**

1) **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2) **Minimum Application Interval:** 14 days
3) **Maximum Annual Rate:** Do not apply more than 90 fl oz of product/A/year.
   a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
4) **Pre-Harvest Interval (PHI):** Do not apply within 1 day of harvest (1-day PHI).
## Crop | Target Diseases | Use Rate (fl oz product/A (lb ai/A)) | Application Instructions
--- | --- | --- | ---
**Fruiting Vegetables**<br>Crop Group 8-10<br>Pepper<br>Bell Pepper<br>Non-Bell Pepper<br>Sweet Non-Bell Pepper | Anthracnose (*Colletotrichum spp.*)<br>Powdery mildew (*Sphaerotheca spp.*) | 6.0-15.5 (0.10-0.25) | Begin applications prior to disease development and continue throughout the season on a 7- to 14-day schedule, following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Eggplant**<br>Okra<br>Pepino<br>Including all cultivars and/or hybrids of these | Soilborne Diseases<br>Rhizoctonia seedling rot (*Rhizoctonia solani*) | 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet) | For soilborne/seeding disease control, see directions and rates under the Soilborne/Seeding Disease Control section.

See specific directions for use for Tomatoes.<br>See complete list of fruiting vegetables below.

### Complete List of Fruiting Vegetables:
African Eggplant; Bell Pepper; Eggplant; Martynia; Nonbell Pepper; Okra; Pea Eggplant; Pepino; Roselle; Scarlet Eggplant; cultivars, varieties; and/or hybrids of these.

### Specific Use Restrictions:
1) **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2) **Minimum Application Interval:** 7 days
3) **Maximum Annual Rate:** Do not apply more than 60 fl oz of product/A/year.
   a. Do not apply more than 1.0 lb ai/A/year of azoxystrobin-containing products.
4) **Pre-Harvest Interval (PHI):** Aframe may be applied the day of harvest (0-day PHI).

### Grapes and Other Small Fruit<br>Vine Climbing<br>Subgroup 13-07F (except fuzzy kiwifruit)<br>Amur River Grape<br>Kiwifruit, Hardy<br>Maypop<br>Muscadines<br>Schisandra Berry<br>Including all cultivars and/or hybrids of these | Black Rot (*Guignardia bidwellii*)<br>Downy Mildew (*Plasmopara viticola*)<br>Phomopsis Cane and Leaf Spot (*Phomopsis viticola*)<br>Powdery Mildew (*Uncinula necator*)<br>Suppression Only: Botrytis Bunch Rot (*Botrytis Cinerea*) | 10.0-15.5 (0.16-0.25) | Begin applications prior to disease development and continue throughout the season every 10-14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than two sequential foliar applications of Aframe or other Group 11 fungicides before alternating with a fungicide that is not in Group 11.

**ATTENTION**
Aframe is extremely phytotoxic to certain apple varieties.

**AVOID SPRAY DRIFT.** Extreme care must be used to prevent injury to apple trees (and apple fruit).

**DO NOT** spray Aframe where spray drift may reach apple trees.

**DO NOT** use spray equipment which has been previously used to apply Aframe to spray apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple varieties.

**AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.**

### Specific Use Restrictions:
1) **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2) **Minimum Application Interval:** 10 days
3) **Maximum Annual Rate:** Do not apply more than 90 fl oz of product/A/year.
   a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
4) **Pre-Harvest Interval (PHI):** Do not apply within 14 days of harvest (14-day PHI).

Foliar Diseases

- Alternaria leaf spot (Alternaria zonchi, A. spp.)
- Anthracnose (Microdochium panattonianum, Colletotrichum dematium)
- Ascochyta leaf spot (Ascochyta spp.)
- Cercospora leaf spot (Cercospora spp.)
- Rust (Puccinia spp.) (Uromyces spp.)
- Septoria leaf spot (Septoria petroselini)
- White rust (Albugo occidentalis)

- Downy mildew (Bremia lactucae)
- Powdery mildew (Erysiphe cichoracearum)

- Soilborne Diseases
- Webb blight, Bottom rot, Crater rot, Root rot (Rhizoctonia solani)

| Use Rate fl oz product/A (lb ai/A) | For both downy and powdery mildew, make preventative applications on a 5- to 7-day schedule. For all other diseases, begin Aframe applications prior to disease development and continue throughout the season every 7-14 days following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11. |

ATTENTION: Applications of Aframe to leafy vegetable foliage have contributed to phytotoxicity under certain circumstances. Proceed with caution with regard to tank mixes and adjuvants when treating all leafy vegetables with Aframe. Aframe must not be tank mixed on leaf lettuce with Ambush® WP, Pounce® WP, Aliette®, Warrior with Zeon Technology®, or another product that may increase the penetration of Aframe into the leaf surface, including, but not limited to, silicone wetters. |

Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 5 days
3) Maximum Annual Rate: Do not apply more than 90 fl oz of product/A/year.
4) Do not apply more than 5 applications per year at the high rate (15.5 fl oz/A) or 15 applications per year at the low rate (6.0 fl oz/A). When applying at 12.0 fl oz/A, do not apply more than 7 applications per year.
5) Pre-Harvest Interval (PHI): Aframe may be applied the day of harvest (0-day PHI).

---|---|---|---
**Mint** (Fresh or for processing into mint oil) | Leaf spot (Ramularia spp.) (Alternaria spp.) (Phoma spp.) Powdery mildew (Erysiphe spp.) Rust (Puccinia menthae) | 6.0-15.5 (0.10-0.25) | Begin Aframe applications prior to disease development and continue throughout the season on a 7- to 10-day schedule, following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Soilborne Diseases** | Seedling root rot, Basal stem rot (Rhizoctonia solani) | 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet) | For soilborne/seedling disease control, see directions and rates under the SOILBORNE/SEEDLING DISEASE CONTROL section.

---

**Nongrass Animal Feeds** | Alternaria leaf spot (Alternaria spp.) Anthracnose (Colletotrichum trifolii) Black patch (Rhizoctonia leguminicola) Cercospora leaf spot (Cercospora spp.) Common leaf spot (Pseudopezizzia solani) Downy mildew (Peronospora spp.) Leaf spot (Leptosphaeria brisiae) Powdery mildew (Oidium spp., Erysiphe spp.) Rhizoctonia and stem blight (Rhizoctonia solani) Rust (Phakopsora spp.) (Uromyces spp.) Spring black stem and leaf spot (Phoma medicaginis) Stagonospora leaf spot (Stagonospora meliloti) Stemblymphium leaf spot (Stemblymphium spp.) Summer black stem and leaf spot (Cercospora medicaginis) Yellow leaf blotch (Leptotrichia medicagoe) Sclerotinia crown rot and wilt on clover (Sclerotinia trifoliorum) | 6.0-15.5 (0.10-0.25) | Begin Aframe applications prior to disease development and continue throughout the season. Use the higher rates under severe disease pressure. Applications may be made by ground, air or chemigation. Use of an additive including crop oil concentrate or non-ionic surfactant is advised.

For management of outbreaks of Asian soybean rust and other Puccinia species on alternate host species including kudzu, lespedeza, trefolli and vetch, apply Aframe to forages grown in the vicinity of soybeans and other legume crops (beans and peas) as a part of an Asian rust disease management strategy. Consult with local experts and university extension agents for the latest advice.

Do not apply more than three sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

---

Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 42 fl oz of product/A/year.
4) Do not apply more than 0.75 lb ai/A/year of azoxystrobin-containing products.
5) Do not apply more than 2 applications per year at the high rate (15.5 fl oz/A) or 7 applications per year at the low rate (6.0 fl oz/A).
6) Pre-Harvest Interval (PHI): a. For processed mint, do not apply within 7 days of harvest (7-day PHI). b. For fresh mint, Aframe may be applied the day of harvest (0-day PHI). c. Do not apply more than 4 applications per year at the high rate (15.5 fl oz/A)
7) Not for use on rangeland.

### Use Rate
- **Fl oz product/A (lb ai/A)**
- **Application Instructions**

**Peanuts**
- **Use Rate**
  - 0.40-0.80 fl oz/1000 row feet
  - 0.013 lb ai/1000 row feet
- **Application Instructions**
  - Apply Aframe at approximately 60 and 90 days after planting as a foliar application. For foliar disease control only, a lower rate of Aframe may be applied on a 10- to 14-day interval.

**Specific Use Restrictions:**
1. **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2. **Minimum Application Interval:** 10 days
3. **Maximum Annual Rate:** Do not exceed the maximum rate listed in the table.
4. **Minimum Application Interval:** 14 days
5. **Pre-Harvest Interval (PHI):** Do not apply within 14 days of harvest (14-day PHI).
Crop | Target Diseases | Use Rate fl oz product/A (lb ai/A) | Application Instructions
--- | --- | --- | ---
**Pistachios** | Alternaria Late Blight *(Alternaria alternata)* Botryosphaeria Panicle and Shoot Blight *(Botryosphaeria dothidea)* Septoria Leaf Spot *(Septoria pistaciaram)* | 12.0-15.5 (0.20-0.25) | Begin Aframe applications prior to disease development and continue throughout the season on 7- to 21-day intervals following the resistance management guidelines. Applications may be made by ground, air or chemigation. An adjuvant may be added at specified rates. Do not apply more than two sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 90 fl oz of product/A/year.
   a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 5 applications per year at the high rate (15.5 fl oz/A) or 15 applications per year at the low rate (6.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Do not apply within 7 days of harvest (7-day PHI).

**Potatoes** | Black dot *(Colletotrichum coccodes)* Early blight *(Alternaria solani)* Late blight *(Phytophthora infestans)* Powdery mildew *(Erysiphe cichoracearum)* | 6.0-15.5 (0.10-0.25) | Early blight - For a 7-day application schedule, use Aframe 6.2 fl oz product/A. For a 14-day application schedule, use the 12.0 fl oz product/A rate.
Late blight - Apply Aframe at 12.0 fl oz product/A on a 7-day schedule. Initiate late blight applications in a preventative schedule prior to disease development according to local practices. If late blight symptoms develop or conditions favor disease, switch immediately to a non-Group 11 fungicide, using a 5-day schedule. Addition of a spreader/sticker may improve coverage.
For all other diseases, begin Aframe applications prior to disease development and continue throughout the season every 7-14 days following the resistance management guidelines. Use the high rate and the shorter interval if disease epidemics are severe. Applications may be made by ground, air or chemigation. Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 120 fl oz of product/A/year.
   a. Do not apply more than 2.0 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 6 applications per year at the high rate (20.0 fl oz/A) or 20 applications per year at the low rate (6.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Do not apply within 14 days of harvest (14-day PHI).

**Seilborne Diseases** | Black dot *(Colletotrichum coccodes)* Black scurf *(Rhizoctonia solani)* Silver scurf *(Helminthosporium solani)* | 0.40-0.80 fl oz/1000 row feet (0.0065-0.013 lb ai/1000 row feet) | For soilborne/seedling disease control, see directions and rates under the SOILBORNE/SEEDLING DISEASE CONTROL section.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 14 days
3) Maximum Annual Rate: Do not apply more than 120 fl oz of product/A/year.
   a. Do not apply more than 0.40 lb ai/A/year of azoxystrobin-containing products.
4) When applying at 12 fl oz/A, do not apply more than 2 applications per year.
5) Pre-Harvest Interval (PHI): a. Do not apply within 7 days (7-day PHI) for forage and hay.
   b. Do not apply within 14 days of grazing (14-day PHI).
   c. Do not apply within 30 days of harvest (30-day PHI).

**Quinoa** | Leaf Spot *(Ascochyta hyalospora)* Stalk Rot *(Phoma exigua)* | 12 (0.20) | Apply prior to disease development.
An adjuvant may be added at specified rates.

**Application Directions:** Aframe can be applied by either ground, chemigation, or aerial application.

**Specific Use Restrictions:**
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 14 days
3) Maximum Annual Rate: Do not apply more than 24 fl oz of product/A/year.
   a. Do not apply more than 0.40 lb ai/A/year of azoxystrobin-containing products.
4) When applying at 12 fl oz/A, do not apply more than 2 applications per year.
5) Pre-Harvest Interval (PHI): a. Do not apply within 7 days (7-day PHI) for forage and hay.
   b. Do not apply within 14 days of grazing (14-day PHI).
   c. Do not apply within 30 days of harvest (30-day PHI).

</tr>
</tbody>
</table>

**Specific Use Restrictions:**

1. **Maximum Single Application Rate:** Do not exceed the maximum rate listed in the table.
2. **Do not treat rice fields used for aquaculture of fish and crustaceans.**
3. **Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitat.** Use care in making applications near non-target aquatic habitats.
4. **Minimum Application Interval:** 7 days
5. **Maximum Annual Rate:** Do not apply more than 42 fl oz of product/acre/year.
   a. Do not apply more than 0.70 lb ai/acre/year of azoxystrobin-containing products.
6. **Do not apply more than 4 applications per year.**
7. **Do not allow release of irrigation or flood water for at least 14 days after the last application.**
8. **Pre-Harvest Interval (PHI):** Do not apply within 14 days of harvest (14-day PHI).

Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 14 days
3) Maximum Annual Rate: Do not apply more than 48 fl oz of product/A/year.
   a. Do not apply more than 0.80 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 4 applications per year at the high rate (12.0 fl oz/A) or 5 applications per year at the low rate (9.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Do not apply within 30 days of harvest (30-day PHI).
6) When applying by air, use no less than 5 gallons spray solution per acre.
Crop | Target Diseases | Use Rate fl oz product/A (lb ai/A) | Application Instructions
--- | --- | --- | ---
Tobacco | Blue mold (Peronospora tabacina) | 6.0-12.0 (0.1-0.2) | Begin Aframe applications prior to disease development or at first indication that blue mold is in the area. Do not apply Aframe as a curative application. If blue mold is present in the field, initiate applications with Acrobat MZ® prior to an Aframe application. Apply on a 7- to 14-day interval with shorter intervals under conditions conducive to disease development. For ground applications, apply Aframe in sufficient water volume for adequate coverage and canopy penetration. For aerial application, use volumes of 10-15 GPA. Applications may be made by ground, air or chemigation. Do not apply Aframe on greenhouse seedlings. Do not tank mix with Thiodan. Tank mixing Aframe with insecticides formulated as emulsifiable concentrates (EC) or containing high amounts of solvents, may cause some crop injury.
Frogeye leaf spot (Cercospora nicotianae) | | | Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.
Target spot (Rhizoctonia solani) | | | NOTE: Aframe may enhance weather flecking on the leaves of certain tobacco types. This does not affect yield and quality.
Tobacco | | | Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 7 days
3) Maximum Annual Rate: Do not apply more than 30 fl oz of product/A/year.
   a. Do not apply more than 0.52 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 2 applications per year at the high rate (12.0 fl oz/A) or 5 applications per year at the low rate (6.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Do not apply within 21 days of harvest (21-day PHI).
Tobacco Transplants in Greenhouse | Target Spot (Rhizoctonia solani) | 6.0 (0.1) | Apply 6 oz/A or 0.14 oz (4ml)/1000 sq ft in enough water for thorough coverage (5 gal/1000 sq ft advised). Make only one application prior to transplanting.
GA, KY, IN, MD, MO, NC, OH, PA, SC, TN and VA only | | | Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Maximum Annual Rate: Do not apply more than 6 fl oz of product/A/year in the greenhouse.
   a. Do not apply more than 0.52 lb ai/A/year of azoxystrobin-containing products.
3) Make only one application in the greenhouse prior to transplanting.
Tomatoes | | | Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Minimum Application Interval: 5 days
3) Maximum Annual Rate: Do not apply more than 35 fl oz of product/A/year.
   a. Do not apply more than 0.6 lb ai/A/year of azoxystrobin-containing products.
4) Do not apply more than 5 applications per year at the high rate (6.2 fl oz/A) or 7 applications per year at the low rate (5.0 fl oz/A).
5) Pre-Harvest Interval (PHI): Aframe may be applied the day of harvest (0-day PHI).
Tomatillos | Anthracnose (Colletotrichum coccodes) | 5.0-6.2 (0.08-0.10) | Begin Aframe applications prior to disease development and continue throughout the season following the resistance management guidelines. For late blight, apply Aframe at 5- to 7-day intervals. For all other tomato diseases, apply Aframe on 7- to 21-day intervals. Applications may be made by ground, air or chemigation. Do not apply more than one application of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.
Black mold (Alternaria alternata) | | | Under certain weather conditions (particularly high temperatures) Aframe in combination with high rates of silicone-based or oil containing (petroleum or crop) additives or adjuvants may cause injury. Do not exceed 0.125% adjuvant (v/v). Consult a Syngenta representative for more information concerning additives or adjuvants.
Buckeye rot (Phytophthora spp.) | | | A tank mixture with Dimethoate may cause crop injury.
Early blight (Alternaria solani) | | | On fresh market tomatoes do not use adjuvants or tank mix Aframe with any emulsifiable concentrate (EC) product.
Powdery mildew (Oidiospica cichorae) | | |
Septoria leaf spot (Septoria lycopersici) | | | Complete List of Tomato Crops: Bush Tomato; Cconia; Currant Tomato; Garden Huckleberry; Goji Berry; Groundcherry; Naranjilla; Sunberry; Tomatillo; Tomato; Tree Tomato; cultivars, varieties, and/or hybrids of these.
Target spot (Corynespora cassiicola) | | | See complete list of disease below.
Late blight (Phytophthora infestans) | 6.2 (0.10) | | Complete List of Tomato Crops: Bush Tomato; Cconia; Currant Tomato; Garden Huckleberry; Goji Berry; Groundcherry; Naranjilla; Sunberry; Tomatillo; Tomato; Tree Tomato; cultivars, varieties, and/or hybrids of these.

| **Specific Use Restrictions:**                     |                                                                                  |                                    | 1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.  
2) Minimum Application Interval: 5 days  
3) Maximum Annual Rate: Do not apply more than 120 fl oz of product/A/year.  
4) Do not apply more than 6 applications per year at the high rate (20.0 fl oz/A) or 20 applications per year at the low rate (6.0 fl oz/A). When applying at 9.0 fl oz/A, do not apply more than 13 applications per year. When applying at 15.5 fl oz/A, do not apply more than 7 applications per year.  
5) Pre-Harvest Interval (PHI): Do not apply within 14 days of harvest (14-day PHI).  
   a. Do not apply more than 2.0 lb ai/A/year of azoxystrobin-containing products.  
4) Do not apply more than 6 applications per year at the high rate (15.5 fl oz/A) or 15 applications per year at the low rate (6.0 fl oz/A).  
5) Pre-Harvest Interval (PHI): Do not apply within 7 days of harvest (7-day PHI).  
   a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.  
6) Do not apply more than 2 sequential applications of Aframe or other Group 11 fungicides before alternation with a fungicide that is not in Group 11.  
7) Do not apply more than 6 applications per year at the high rate (15.5 fl oz/A) or 15 applications per year at the low rate (6.0 fl oz/A).  
8) Pre-Harvest Interval (PHI): Do not apply within 7 days of harvest (7-day PHI).  
   a. Do not apply more than 1.5 lb ai/A/year of azoxystrobin-containing products.  

Crop | Target Diseases | Use Rate fl oz product/A (lb ai/A) | Application Instructions |
--- | --- | --- | --- |
Wild Rice | Brown spot (Bipolaris oryzae or Bipolaris sorokiana) Also known as Helminthosporium oryzae and H. sativum Stem rot (Nakataea sigmoidea) | 12.5-15.5 (0.20-0.25) | Apply Aframe prior to disease development. Applications may be made by ground, air, or chemigation. For aerial application, use volumes of 5-10 GPA. An adjuvant may be added at specified rates. For foliar diseases, apply Aframe prior to disease development. Apply during tillering, boot, early heading, or at initial sign of disease. Under heavy disease pressure and conditions favorable for disease development, a second application may be applied. Do not apply more than two sequential applications of Aframe or other Group 11 fungicide before alternation with a fungicide that is not in Group 11. Do not make more than two applications of Aframe or other Group 11 fungicide per season. |

Specific Use Restrictions:
1) Maximum Single Application Rate: Do not exceed the maximum rate listed in the table.
2) Do not treat wild rice fields used for aquaculture of fish and crustaceans.
3) Do not apply when weather conditions favor drift from treated areas to non-target aquatic habitats. Use care in making applications near non-target aquatic habitats.
4) Minimum Application Interval: 7 days
5) Maximum Annual Rate: Do not apply more than 37.5 fl oz of product/A/year.
   a. Do not apply more than 0.70 lb ai/A/year of azoxystrobin-containing products.
6) Do not apply more than 2 applications per year at the high rate (15.5 fl oz/A) or 3 applications per year at the low rate (12.5 fl oz/A).
7) Do not allow release of irrigation or flood water for at least 14 days after the last application.
8) Pre-Harvest Interval (PHI): Do not apply within 28 days of harvest (28-day PHI).

<tbody>
<tr>
<td>Bananas</td>
<td>Crown Rot/Crown Mold (Colletotrichum musae, Fusarium pallidoroseum, Acremonium spp., Ceratocystis paradoxa, Glomerella cingulata, Penicillium spp.)</td>
<td>200-400 ppm solution</td>
<td>Apply Aframe as a single application of a 200-400 ppm solution to achieve good coverage. The application may be made as a spray, dip or may be painted onto the cut ends of the bananas. Application of the 200 ppm rate is appropriate for short distance transportation (e.g., within the USA). When a longer time in transport is expected (export), use the 300-400 ppm rate. If alum (1% w/v) is added to the spray solution, stir the suspension frequently as sedimentation and flocculation may occur. Addition of a non-ionic surfactant (0.10% v/v) may improve the compatibility of this mixture.</td>
</tr>
<tr>
<td>Plantains</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Specific Use Restrictions:**
1) Do not make more than one application to bananas as post-harvest treatment.
2) Aframe may be degraded by exposure to direct sunlight. Do not store treated fruit in direct sunlight.

### STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

**Pesticide Storage**

Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, mop and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

**Pesticide Disposal**

Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

**Container Handling [less than or equal to 5 gallons]**

Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use and disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration.

**Container Handling [greater than 5 gallons]**

Refillable container. Refill this container with pesticide only. Do not reuse the container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the person refilling. To clean container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures allowed by state and local authorities.

Non-refillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures allowed by state and local authorities.

CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER.
2.5 gallons
Net Contents

KEEP OUT OF REACH OF CHILDREN.

CAUTION

FIRST AID
If on skin or clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice. Have the product container or label with you when calling a poison control center or doctor or going for treatment.

HOTLINE NUMBER: For 24-Hour Medical Emergency Assistance (Human or Animal) Or Chemical Emergency Assistance (Spill, Leak, Fire or Accident) Call 1-800-888-8372.

PRECAUTIONARY STATEMENTS

Hazard to Humans and Domestic Animals

CAUTION

Harmful if absorbed through skin. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Environmental Hazards: Azoxystrobin is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Azoxystrobin can be persistent for several months or longer.

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Azoxystrobin and a degrade of azoxystrobin are known to leach through soil to ground water under certain conditions as a result of label use. This chemical may leak into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

Surface Water Advisory: This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of azoxystrobin and a degrade of azoxystrobin from runoff water and sediment.

Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours. Notify State and/or Federal authorities and Syngenta immediately if you observe any adverse environmental effects due to use of this product.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, mop and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

Pesticide Disposal: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

Container Handling: [less than or equal to 5 gallons]
Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Empty remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use and disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration.

CONTAINER IS NOT SAFE FOR FOOD, FEED OR DRINKING WATER.
