SUPPLEMENTAL LABELING

READ THE ENTIRE LABEL FOR LOROX DF AND FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS BEFORE PROCEEDING WITH THE USE DIRECTIONS CONTAINED IN THIS SUPPLEMENTAL LABELING.

This labeling must be in the possession of the user at the time of pesticide application. “Label” as used in this supplemental labeling refers to the label booklet for LOROX® DF and this supplement. This supplemental labeling expires on December 31, 2016 and must not be used or distributed after this date.

Lorox® DF
Agricultural Herbicide

EPA Reg. No. 61842-23

FOR WEED CONTROL IN CELERIAC, CORIANDER/CILANTRO, DILL, HORSERADISH, PARSLEY, PEAS (DRY) AND OTHER DRY CULTIVARS OF PEAS, AND RHUBARB.

KEEP OUT OF REACH OF CHILDREN

CAUTION

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

PRODUCT INFORMATION
LOROX DF selectively controls certain broadleaf weeds and grasses in the following crops. Surface of the soil should not be cultivated or disturbed after application of LOROX DF and before emergence of the crop as weed control may be reduced and crop injury may result.

CELERIAC
- Do not exceed 40 psi spray nozzle pressure and do not apply when temperatures exceed 85 degrees F or as a tank mixture with surfactants, nitrogen or fertilizer solution, or other pesticides, as injury to the crop may result.
- Do not replant to crops other than rhubarb, celeriac, celery, or carrots within 4 months after application as injury to subsequent crops may result.
- Do not apply within 60 days of harvest.
- Do not apply this product to celeriac through any type of irrigation system.
- The restricted-entry interval for treated celeriac is 8 days for hand-set irrigation activity and 24 hours for all other activities.

Make a single application at up to 3 pounds per acre. Apply as a broadcast spray after celeriac is transplanted and established, but before celeriac is 8 inches tall. Apply before annual grasses exceed 2 inches in height and before broadleaf weeds exceed 6 inches in height.

CORIANDER/CILANTRO
Because coriander/cilantro varieties may vary in their resistance, determine tolerance to LOROX DF prior to adoption as a field practice to prevent possible crop injury.
- Do not apply to sand or loamy sand soil types to avoid crop injury.
- Do not use on soils with less than 1% organic matter to avoid crop injury.
- Do not exceed 4 lbs. LOROX DF per acre per year East of Rocky Mountains.
- Do not exceed 3 lbs. LOROX DF per acre per year West of Rocky Mountains.
- Do not apply within 21 days of harvest for leaves and stems.
- Do not apply within 155 days of harvest for coriander seed.
- Do not apply this product to coriander/cilantro through any type of irrigation system.
- The restricted-entry interval for treated coriander/cilantro is 4 days for hand-set irrigation activity and 24 hours for all other activities.
Preemergence: Make a single broadcast application of LOROX DF at a rate up to 1-2 pounds per acre after planting but before crop emergence. Plant seeds at least 1/2 inch deep. Allow an irrigation or rainfall of at least 1/2 inch prior to making application after planting. Use lower rates on lighter soils and higher rates on heavier soils. Additional postemergence applications may be made as long as the total does not exceed the seasonal maximum of LOROX DF for the geography.

Postemergence: Make up to two postemergence applications of LOROX DF at up to rate of 1-2 pounds per acre to control emerged weeds. Apply after coriander/cilantro has a minimum of 3 true leaves or significant crop injury may result; grower and/or applicator assumes all crop injury risk if applications are made to coriander/cilantro with less than 3 leaves. Early crop injury can occur, however the effect should be transitory, with no yield losses attributable to crop injury. Apply when weeds are in the 1 to 3 true leaf stage. A second application may be made 14 days following the first application but no later than 21 days before harvest. Do not exceed the seasonal maximum of LOROX DF for the geography.

Precautions for Postemergence Applications:
Do not treat susceptible varieties which show an initial burning of foliage following postemergence treatment with LOROX DF.
Do not exceed 40 psi spray nozzle pressure as crop injury may result.
Do not apply when the temperature exceeds 85° F as crop injury may result.
The activity of LOROX DF on both the crop and weeds is increased if applied after 3 or more cloudy days. If spraying is done under these conditions, the dosage of LOROX DF must be reduced.
The addition or tankmix of surfactants, nitrogen or fertilizer solution, and/or other pesticides may cause crop injury. The grower/applicator assumes all risks in the tankmix situations.

LOROX DF often interacts with other herbicides or insecticides and may damage coriander/cilantro when the chemicals are tank mixed or applied sequentially at close intervals. Several days, preferably a week should elapse between LOROX DF applications and application of insecticides.

DILL
Determine tolerance of dill to LOROX DF prior to adoption as a field practice to prevent possible crop injury.
- Do not apply to sand or loamy sand soil types to avoid crop injury.
- Do not use on soils with less than 1% organic matter to avoid crop injury.
- Do not exceed 4 lbs. LOROX DF per acre per year East of Rocky Mountains.
- Do not exceed 3 lbs. LOROX DF per acre per year West of Rocky Mountains.
- Do not apply within 21 days of harvest.
- Do not apply this product to dill through any type of irrigation system.
- The restricted-entry interval for treated dill is 4 days for hand-set irrigation activity and 24 hours for all other activities.

Preemergence
Make a single broadcast application of LOROX DF at a rate up to 2 pounds per acre after planting but before crop emergence. Plant seeds at least 1/2 inch deep. Allow an irrigation or rainfall of at least 1/2 inch prior to making application after planting. Use lower rates on lighter soils and higher rates on heavier soils. Additional postemergence applications may be made as long as the total does not exceed the seasonal maximum of LOROX DF for the geography.

Postemergence
Make up to two postemergence applications of LOROX DF at up to rate of 1-2 pounds per acre to control emerged weeds. Apply after dill has a minimum of 3 true leaves or crop injury may result; grower and/or applicator assumes all crop injury risk if applications are made to dill with less than 3 leaves. Early crop injury can occur, however the effect should be transitory, with no yield losses attributable to crop injury. Apply when weeds are in the 1 to 3 true leaf stage. A second application may be made 14 days following the first application but no later than 21 days before harvest. Do not exceed the seasonal maximum of LOROX DF for the geography.

Precautions for Postemergence Applications:
Do not treat susceptible varieties which show an initial burning of foliage following postemergence treatment with LOROX DF.
Do not exceed 40 psi spray nozzle pressure as crop injury may result.
Do not apply when the temperature exceeds 85° F as crop injury may result.
The activity of LOROX DF on both the crop and weeds is increased if applied after 3 or more cloudy days. If spraying is done under these conditions, the dosage of LOROX DF must be reduced. The addition or tankmix of surfactants, nitrogen or fertilizer solution, and/or other pesticides may cause crop injury. The grower/applicator assumes all risks in the tankmix situations.

LOROX DF often interacts with other herbicides or insecticides and may damage dill when the chemicals are tank mixed or applied sequentially at close intervals. Several days, preferably a week should elapse between LOROX DF applications and application of insecticides.

HORSERADISH
Make a single broadcast application of LOROX DF at a rate up to 3 pounds per acre after planting or during dormancy, but before the leaves emerge in spring. Allow an irrigation or rainfall of at least 1/2 inch prior to making application after planting. Use lower rates on lighter soils and higher rates on heavier soils. Do not apply more than 3 pounds per acre per year. Do not apply this product to horseradish through any type of irrigation system.

PARSLEY
- Do not exceed a total of 3 pounds of LOROX DF per acre per season.
- Do not apply within 30 days of harvest.
- In Texas, use on mineral soils only.
- Do not apply this product to parsley through any type of irrigation system.
- The restricted-entry interval for treated parsley is 4 days for hand-set irrigation activity and 24 hours for all other activities.

Preemergence (Mineral and Muck Soils)
Make a single broadcast application of LOROX DF at a rate of 1 to 3 pounds per acre after planting, but before the crop emerges. Use lower rates on coarse soils and higher rates on heavier soils.

Postemergence (Muck Soils Only)
Make a single application of LOROX DF at a rate of 1 pound per acre to control emerged weeds. Apply after parsley has a minimum of 3 true leaves or crop injury may result. Apply when weeds are in the 1 to 3 true leaf stage. Do not tank mix with surfactants, nitrogen or fertilizer solution, or other pesticides, as injury to the crop may result.

PEAS, DRY INCLUDING DRY CULTIVARS OF PIGEON PEAS, CHICKPEAS, GARLANZO BEANS, LENTILS, DWARF PEAS, GARDEN PEAS, GREEN PEAS, ENGLISH PEAS, FIELD PEAS, AND EDIBLE POD PEAS
- Do not apply more than one (1) application per acre per season.
- Do not apply to sand or loamy sand soil types.
- Do not use on soils with less than 1% organic matter.
- Do not apply this product to dry peas through any type of irrigation system.

Apply LOROX DF at a single application at up to 2 pounds per acre post planting but preemergence to the crop. Sufficient rainfall to move the herbicide into the root zone of germinating weeds is needed for best performance. Use lower rates on coarse soils and higher rates on heavier soils. LOROX DF Herbicide may be tank mixed with other herbicides registered for use in these crops. When tank mixing, use the most restrictive label limitations for each of the products being used in the tank mix.

RHUBARB
Apply as a single treatment at up to 3 pounds of LOROX DF per acre as a dormant application (before leaves emerge from the crown). Make application as a broadcast or banded over-the-row treatment – for banded treatments use proportionately less. Do not exceed a total of 3 pounds of LOROX DF per acre per season. Do not apply this product to rhubarb through any type of irrigation system.
