Heavily fouled systems must be cleaned before treatment is begun. Not registered for use in California. There are no specific instructions regarding the quantity of water to be treated or the duration of the treatment. When microbial control is evident, add 10.3 to 51.8 fluid ounces of product per 1000 gallons (81 to 405 milliliters/1000 liters) of water contained in the system. Repeat as needed to maintain control. When used as directed, this product effectively controls algal, bacterial, and fungal slimes in commercial and industrial cooling towers, recirculating cooling and process water systems including cooling towers, air washers and industrial air scrubbing systems, recirculating cooling water and process water systems including cooling towers, air washers and industrial air scrubbing systems, and hydrostatic sterilizers and retorts. Add this product at a point of uniform mixing. The product must be thoroughly mixed into the system before treatment. Be sure to release any pressure in the container prior to fully opening. This can be done by metered delivery systems only. Open pouring is prohibited. To clean the container before final disposal, empty the remaining contents from the container. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before purpose. When used as directed this product effectively controls bacterial and fungal slimes in pulp, paper, and paperboard mill process water systems including white water systems. Treat water at critical areas in the process. When the system is noticeably fouled, or to maintain control in the system, add 4.2 to 340.2 gallons of this product per 1000 gallons (100 to 8100 liters) of water contained in the system. Repeat injections when diluted by the water present in the drips. Repeat injections as needed to maintain control. Individual drips must be treated with sufficient quantity of this product to produce a concentration of 100-8100 ppm of product when diluted by the water present in the formation. Follow dosing instructions for enhanced oil recovery systems. Ensure maximum distribution of product through the entire internal surface of the pipeline. DIRECTIONS FOR USE CONTINUED:
