Sale, use and distribution of this product in Nassau and Suffolk Counties in the State of New York is prohibited.

GROUP 15 HERBICIDE

Medal® EC Herbicide

This supplemental label expires on May 15, 2017 and must not be used or distributed after this date.

Active Ingredient:
S-metolachlor (CAS No. 87392-12-9) ................................................................. 83.7%
Other Ingredients: ................................................................................. 16.3%
Total: ..................................................................................................... 100.0%

Medal EC is formulated as an Emulsifiable Concentrate (EC).

Medal EC contains 7.62 lbs. of active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN.

CAUTION

EPA Reg. No. 100-816

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed. Before using Medal EC as permitted according to this Supplemental Labeling, read and follow all applicable directions, restrictions, and precautions on the EPA-registered label on or attached to the pesticide product container. This Supplemental Labeling contains revised use instructions and/or restrictions that may be different from those that appear on the container label. This Supplemental Labeling must be in the possession of the user at the time of pesticide application. It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.
DIRECTIONS FOR USE

SOYBEANS – MEDAL EC ALONE

Apply Medal EC in the fall for spring weed control, in the fall for Italian ryegrass control or in the spring as a preplant surface-applied, preplant incorporated, preemergence, or postemergence application for control or partial control of weeds in Table 1.

The combined total amount of Medal EC from all applications in the fall plus the spring must not exceed 2.6 pt/A. The combined total amount of S-metolachlor from all applications to soybeans must not exceed 2.5 lb ai/A.

Follow instructions for use of Medal EC alone under the Application Procedures section of this label.

Read and follow all restrictions in the Restrictions For All Medal EC Soybean Applications section below.

Fall Application for Spring Weed Control

- Apply after September 30 in ND, SD, MN, WI, and north of Route 30 in IA.
- Apply after October 15 north of Route 91 in NE and south of Route 30 in IA.
- Apply after October 31 north of Route 136 in IL.

In all locations, apply to crop stubble after harvest when the sustained soil temperature at a 4-inch depth is less than 55°F and falling.

In minimum-till or no-tillage systems on soils having greater than 2.5% organic matter, use 1.67-2.0 pt/A of Medal EC on medium-textured and 2.0 pt/A of Medal EC on fine-textured soils. A tillage operation may precede the application. A fall and/or a spring tillage may follow application, but do not exceed an incorporation depth greater than 2-3 inches. Minimize furrow and ridge formation in the tillage operations.

Fall Application for Italian Ryegrass Control

Medal EC may be applied for residual control of glyphosate-resistant Italian ryegrass (Lolium multiflorum). Apply Medal EC at 1.33-1.67 pt/A in the fall (September 1-December 1) after harvest of the previous crop and prior to Italian ryegrass emergence. Use the lower Medal EC rate for coarse textured soils and the higher rate for fine-textured soils. A tillage operation may precede the application. Do not incorporate to a depth greater than 2-3 inches if tillage follows the application of Medal EC.
For fall applications after emergence of glyphosate-resistant Italian ryegrass, a Gramoxone brand herbicide can be tank mixed with Medal EC to control emerged ryegrass. Refer to the Gramoxone brand herbicide label for specific rates, application instructions and restrictions. Other registered herbicides may be tank mixed with Medal EC for control or improved control of other weeds present at the time of application.

**Spring Preplant Surface Application**

Use on medium and fine soils with minimum-tillage or no-tillage systems in CO, CT, DE, IA, IL, IN, KS, KY, MA, MD, ME, MI, MN, MO, MT, ND, NE, NH, NY, OH, PA, RI, SD, TN, VA, VT, WI, WV, and WY. Apply 2/3 the recommended rate of Medal EC (1.67 pt/A on medium soils and 2.0 pt/A on fine soils) as a split treatment 30-45 days prior to planting and the remainder at planting. Applications made less than 30 days before planting may be as either a split or single treatment. Apply 1.33 pt/A of Medal EC on coarse soils not more than 2 weeks prior to planting.

Medal EC may be used up to 2.6 pt/A as a preplant surface treatment on soils having organic matter content between 6% and 20%.

**Preplant Incorporated or Preemergence**

On coarse soils, apply 1.0-1.33 pt/A of Medal EC if organic matter content is less than 3%, or 1.33 pt/A if organic matter content is 3% or greater. On medium soils, apply 1.33-1.67 pt/A of Medal EC. On fine soils, apply 1.33-1.67 pt/A of Medal EC if organic matter content is less than 3%, or 1.67-2.0 pt/A if organic matter content is 3% or greater.

Medal EC may be used up to 2.6 pt/A as a preplant incorporated or preemergence treatment on soils having an organic matter content between 6% and 20%.

**Postemergence**

Apply 1.0-1.33 pt/A of Medal EC as a postemergence treatment to soybeans. Medal EC will not control emerged weeds so it must be applied to a weed-free soil surface or in a tank mixture with products that provide postemergence control of weeds present at the time of application.

Medal EC can also be applied as part of a sequential soybean weed control program. If Medal EC was applied as a preplant surface, preplant incorporated, or a preemergence treatment, a second treatment of Medal EC can be applied postemergence provided that the total Medal EC rate during any one crop does not exceed 2.6 pt./A.
Restrictions For All Medal EC Soybean Applications

1. The combined total amount of Medal EC from all applications in the fall plus the spring must not exceed 2.6 pt/A per year.

2. The combined total amount of S-metolachlor from all applications to soybeans must not exceed 2.5 lb ai/A per year.

3. Do not apply more than 1.33 pt/A per year of Medal EC postemergence to soybeans.

4. Make postemergence applications at least 90 days before harvest.

5. Do not graze or feed treated soybean forage, hay, or straw to livestock for 30 days following a preplant surface, preplant incorporated or preemergence application.

6. Do not graze or feed treated forage or hay from soybeans to livestock following a postemergence application of Medal EC.

7. Do not apply Medal EC to frozen ground.

SOYBEANS – MEDAL EC COMBINATIONS

Medal EC may be tank mixed with other herbicides for improved residual control of the weeds listed in Table 1. For Medal EC application rates, refer to the Soybeans – Medal EC Alone section above.

The combined total amount of Medal EC from all applications in the fall plus the spring must not exceed 2.6 pt/A. The combined total amount of S-metolachlor from all applications to soybeans must not exceed 2.5 lb ai/A.

The tank mixtures with Medal EC identified in Table 11 may be applied to soybeans for improved residual control. Refer to individual product labels for precautionary statements, restrictions, rates, approved uses, rotational restrictions and a list of weeds controlled. Follow the most restrictive label.

**Restrictions For All Medal EC Soybean Tank Mixture Applications**

1. For all tank mixtures, refer to individual product labels for precautionary statements, restrictions, rates, approved uses, rotational restrictions and a list of weeds controlled. Follow the most restrictive label.

2. The combined total amount of Medal EC from all applications in the fall plus the spring must not exceed 2.6 pt/A per year.

3. The combined total amount of S-metolachlor from all applications to soybeans must not exceed 2.5 lb ai/A per year.

4. Do not apply more than 1.33 pt/A per year of Medal EC postemergence to soybeans.

5. Make postemergence applications at least 90 days before harvest.

6. Do not graze or feed treated soybean forage, hay, or straw to livestock for 30 days following a preplant surface, preplant incorporated or preemergence application.

7. Do not graze or feed treated forage or hay from soybeans to livestock following a postemergence application of Medal EC.

8. Do not apply Medal EC to frozen ground.
