Product Information

Prowl H₂O is a selective herbicide for controlling most annual grasses and certain broadleaf weeds as they germinate. Refer to the Prowl H₂O container label for a complete list of weeds controlled.

Application Instructions

Prowl H₂O may be applied only by ground.

Use Methods, Timings, and Rates

For use in Idaho, Oregon, and Washington only.

Prowl H₂O may be used as part of a weed management program in hops. Apply Prowl H₂O before target weed germination when hops are in the dormant or vegetative stages of growth.

Apply Prowl H₂O as a broadcast or banded treatment (including postemergence-directed) using ground equipment. Apply the spray directly to the ground beneath the vines and/or in areas between rows. DO NOT apply over the top of vines with leaves or cones. Contact with hop foliage or cones by spray mixture or drift may cause injury.

Uniformly apply at a broadcast rate of 1.1 to 4.2 quarts of Prowl H₂O per acre (1 to 4 lbs a.i./A) in either a single application or sequential applications with an interval of 30 days or more. DO NOT exceed a maximum cumulative total of 4.2 quarts of Prowl H₂O per acre per year.
**Prowl® H₂O herbicide** may be applied in a sequential use program or as a tank mix with other registered herbicides that control emerged weeds.

**Tank Mixes**

**Prowl H₂O** may be tank mixed with other herbicides labeled for use in hops. BASF recommends testing **Prowl H₂O** tank mixes on a small portion of the target crop to determine if damage is likely to occur.

Follow all precautions and restrictions on the labels of all products applied in combination with **Prowl H₂O**. Always follow the most restrictive label.
