ACTIVE INGREDIENT:
Sulfentrazone........................................... 39.6%
OTHER INGREDIENTS:............................. 60.4%
TOTAL: ............................................ 100.0%

Contains 4 pounds of active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN
CAUTION
Si usted no entiende esta etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand this label, find someone to explain it to you in detail.)

Agricultural Use Requirements
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. Refer to the label booklet under "Agricultural Use Requirements" in the Directions for Use section for information about this standard.

For additional Precautionary Statements, First Aid, Storage, Disposal and other user information see inside this label.

Notice: Read this entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at end of label booklet. If terms are unacceptable, return at once unopened.

Shake Well Before Using
in case of emergency endangering health or the environment involving this product, call Chemtrec at 1-800-424-9300.

Agricultural Chemical. Do not ship or store with food, feed, drugs or clothing.

FIRST AID

IF INHALED
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

IF ON SKIN OR CLOTHING
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a Poison Control Center or doctor for treatment advice.

IF IN EYES
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes. Then continue rinsing eye.
• Call a Poison Control Center or doctor for treatment advice.

IF SWALLOWED
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

HOTLINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact Chemtree at 1-800-424-9300 for emergency medical information.

NOTE TO PHYSICIAN
Sulfentrazone is expected to have low oral and dermal toxicity, and moderate inhalation toxicity. It is expected to be slightly irritating to the skin and minimally irritating to the eyes. Treatment is otherwise controlled removal of exposure followed by symptomatic and supportive care.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals
Caution
Causes moderate eye irritation. Harmful if inhaled, swallowed, or absorbed through skin. Avoid breathing vapor or spray mist. Avoid contact with skin, eyes or clothing.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear: long-sleeved shirt and long pants, chemical-resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride, and shoes plus socks.

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations:
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Environmental Hazards

This pesticide is toxic to marine/estuarine invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to beneficial and aquatic plants in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsates.

Groundwater advisory:
This chemical is known to leach through soil into groundwater under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Do not use on cropland soils classified as sand, which have less than 1% organic matter.

Surface water advisory:
Sulfentrazone can contaminate surface water through spray drift. Under some conditions, sulfentrazone may also have a high potential for runoff into surface water (primarily via dissolution in runoff water), for several to many months post-application. These include poorly drained or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, areas overlying extremely shallow groundwater, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas overlying tile drainage systems that drain to surface waters.

Physical/Chemical Hazards
Do not use or store near heat or open flame.
DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

Applicants must not exceed labeled rates of this product. Refer to specific crop directions for use rates. Calculate the 12 month period for the purpose of maximum use rates from when Blanket 4F is first applied.

For any requirements specific to your State or Tribe, consult the Agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers, farm owners, operators, farm laborers, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. These Blanket 4F requirements only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

Personal Protective Equipment (PPE) required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is: Coveralls over long-sleeved shirt and long pants, chemical-resistant gloves made of any waterproof material, and shoes plus socks.

HERBICIDE RESISTANCE

Blanket 4F must be applied at the labeled rates and in accordance with label directions. Do not apply Blanket 4F at rates less than those listed in this label. Observe target areas prior to treatment and apply Blanket 4F when weeds are smaller.

If levels of control provided by applications of this product is reduced, and cannot be accounted for by factors such as mishandling, abnormal levels of target species or extremes of weather, it may be the case that target species have developed a strain resistant to applications of Blanket 4F. If resistance develops, Blanket 4F may not provide control of target species. Where you suspect target species are developing resistance, contact State/local agricultural advisors.

Certain species may develop resistance to this product and other herbicides where they are used repeatedly. Application of pesticide products therefore should be carried out in consultation with local State agricultural advisors so that local resistance management strategies can be implemented.

In order to limit the possibility of resistance developing, apply Blanket 4F in rotation with products that have a different mode of action and other classes of chemistry.

PRODUCT INFORMATION

Blanket 4F is a soil-applied selective herbicide. It will control listed grasses, sedges and broadleaf weeds. Blanket 4F is a flowable product that contains 4 pounds of active ingredient (flufenacet) per gallon.

The active ingredient flufenacet inhibits an enzyme required by plants in order to produce chlorophyll. Inhibiting this enzyme leads to the release of singlet oxygen (O) which then disrupts cellular membranes, resulting in cellular leakage and cellular death ultimately resulting in plant death.

Blanket 4F has a selective mode of action because flufenacet is a greater affinity for the PPO IX enzyme in listed weed species as opposed to listed crops.

Blanket 4F must be prepared and used in such a way as to prevent the following:

- Spill
- Improper disposal of spray mixtures, rinsate or any excess pesticide
- Spill occurring in wells

Setback

The following activities must not be carried out within 50 feet of any well (including drainage and abandoned wells) unless the activity is carried out on an impervious pad that has been built to withstand possible weight that will be moved across the pad or placed upon it:

- Loading
- Mixing
- Washing/inspecting Blanket 4F from application equipment

The impervious pad must be made to contain any leach or spills, as well as any rinsewater/washwaters and slgh that may fall upon it. An impervious pad that does not have a roof must have enough capacity to contain a minimum of 110% of the volume of the largest container that will be placed on the pad. Those pads that are covered by a roof must have enough capacity to contain a minimum of 100% of the volume of the largest container that will be placed on the pad. The roof must be big enough to completely exclude contact with the pad from rainfall.

The above containment volume minimum must be maintained. The minimum capacity volumes do not apply to the following:

- Vehicles delivering pesticide product to the load/mix area

Applicants must ensure that they are aware of any State requirements for containment and set back from wells.

Do not load or mix Blanket 4F within 50 feet of any situses, reservoirs, impounded or natural lakes, wells (including drainage and abandoned wells) or intermittent/perennial rivers and streams. This restriction does not apply where there are properly diked loading/mixing areas or impervious pads. The restriction also does not apply where abandoned wells are properly plugged or capped.
APPLICATION INSTRUCTIONS

Apply this product in one of the following ways:

- as a surface application, pre-emergence treatment (i.e., before crop and/or weed emergence)
- as an incorporated treatment prior to planting
- Post-plant application
- Over-the-top
- Lay-by

For further detail, refer to the Crop Specific Use Directions below.

Blanket 4F must be incorporated following a uniform surface application to a depth of 2 inches maximum. If it is incorporated to a greater depth, reduced control of target species may result. Applications must ensure that there is no overlap between areas that have been treated with Blanket 4F due to soil movement. Such an overlap could cause an adverse crop response.

When Blanket 4F is applied or applied as a post-plant treatment, the herbicidal action of the product must be activated by moisture. The amount of moisture required depends upon a number of factors including:

- soil type
- organic matter content
- tillage
- existing soil moisture at the time of treatment

For an effective application of Blanket 4F, 0.5 to 1 inch of irrigation or rainfall is required within 7 to 10 days following treatment, if that level of moisture is not received, shallow incorporation must be undertaken in order to obtain sufficient control of target species. Activating moisture can be delayed for 10–14 days, and sometimes longer, depending on the factors listed above. If activating moisture is delayed, or if control of listed species may be reduced, due to the growth of weeds during the delay.

When Blanket 4F has been activated, it will provide control of listed weed species. The level of control will depend on the size and type of weed species when Blanket 4F is activated. The control of listed germinating weed species will be reduced when rain or irrigation follows a period of dry weather.

Apply Blanket 4F prior to the germination of crop seeds in order to avoid damage to emerging seedlings. Crop damage may occur where treatment is delayed if seeds are germinating, or are close to the soil surface.

If Blanket 4F is applied by surface application and activation has not been triggered by rainfall or irrigation (0.5” to 1”) moisture) within 10 days of treatment, make a shallow incorporation (less than 2”) of the product so that germinating weed species can be controlled. Soil incorporation will also facilitate product activation with existing soil moisture.

Where there is prolonged period when rain or irrigation is not available, alternative weed control methods should be considered.

Follow Crop Specific Use Directions exactly and with care, particularly for post-plant treatments.

Lay-by/Over-the-top applications provide control of listed species through contact and residual control (depending on weed species).

Combining this product with a surfactant may improve control of listed species, but may also increase the risk of crop injury.

Applicators must be aware that certain crops will react differently to treatment with Blanket 4F according to the following factors:

- use rate
- specific crop species sensitivity
- soil composition

Once a treatment with Blanket 4F has been made, seedlings and germinating seeds absorb sulfentrazone from the soil solution. The amount of available active ingredient contained in the soil solution, is determined by the following factors:

- soil type
- soil pH
- soil organic matter content

Sulfentrazone is absorbed by the organic matter and clay parts of soils. This absorption reduces the amount of active ingredient available for weed uptake. Clay content in soil tends to increase as the soil gets finer. Crop Use Directions are indicated per soil type. Refer to the following chart to determine the category of a particular soil type:

<table>
<thead>
<tr>
<th>Coarse Soil</th>
<th>Sand</th>
<th>Loamy Sand</th>
<th>Sandy Loam</th>
</tr>
</thead>
<tbody>
<tr>
<td>Medium Soil</td>
<td>Sandy clay loam</td>
<td>Sandy Clay</td>
<td>Loam</td>
</tr>
<tr>
<td>Fine Soil</td>
<td>Silty clay loam</td>
<td>Silty clay</td>
<td>Clay loam</td>
</tr>
</tbody>
</table>
The organic matter in soil will vary widely within soil classifications. In order to assess organic matter soil content, a detailed analysis will be required. The amount of surfactants available for uptake by weed species will increase as the pH of the soil increases. The pH of the soil must be accurately assessed using representative soil samples. In addition, irrigation with water with a high pH (i.e. saline water) following treatment will increase the amount of available surfactants for uptake by target species. However, if irrigation water pH exceeds 7.5, crop damage may result. The likelihood of an adverse response by crops will decrease as the growth stage of crops advances. The use rate of this product will be determined by the following factors:

- Timing of treatment
- The amount of activating moisture (rainfall/irrigation)
- Soil parameters
- Soil pH

The Crop Specific Use Directions (below) for each crop, are based on:

- soil type
- soil organic matter
- soil pH interactions

The performance of Blanket 4F and crop tolerance is based on strictly following the Crop Specific Use Directions.

Application by Air

- Apply Blanket 4F using appropriate nozzles that will allow for optimal coverage, will minimize drift and will keep fine spray droplets to a minimum.
- Apply Blanket 4F at an appropriate volume for sufficient coverage. Use minimum spray volume of 6 gallons per acre.
- Do not apply Blanket 4F when wind speed is likely to cause drift outside the target area.

Application by Ground

- Apply Blanket 4F using a boom and nozzle sprayer with the appropriate spray tips, screens and nozzles. Application equipment must be calibrated for optimal coverage and spray distribution at the appropriate pressure.
- Use spray nozzles that will minimize drift by keeping fine spray droplets to a minimum.
- Apply Blanket 4F in a minimum spray volume of 10 gallons per acre. Avoid overlapping applications which may result in excessive treatment and adverse crop response. When starting, turning or stopping, slower ground speed of application equipment may also lead to excessive treatment.
- Do not apply Blanket 4F when wind speed is likely to cause drift outside the target area.

Chemigation Application

Blanket 4F may be applied through sprayer irrigation systems including center pivot, lateral move, and tow, side, or hand move irrigation systems. Do not apply this product through any other type of irrigation system. Do not connect any irrigation system (including greenhouse systems) used for pesticide application to a public water system. Crop injury, lack of effectiveness or illegal residues on or in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts. A person knowledgeable of the chemigation system and responsible for its operation, under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

The system must contain a functional check valve, vacuum relief valve, and low-pressure drain properly located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must also contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located at the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Blanket 4F should be metered into the irrigation system continuously for the duration of the water application. Blanket 4F should be diluted in sufficient volume to insure accurate application over the area to be treated. Use the appropriate amount of water to carry the product to the soil surface. Continuous agitation is required to maintain product suspension in the solution tank. A jar test should be conducted to ensure that phase separation would not occur during dilution and application. Failure to achieve a uniform dilution throughout the time of application may result in undesirable residues or less than desirable weed control. Flush the lines at the conclusion of the application and then turn the water off promptly.

When using water from public water systems; DO NOT APPLY Blanket 4F THROUGH ANY IRRIGATION SYSTEM PHYSICALLY CONNECTED TO A PUBLIC WATER SYSTEM. Public water systems means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days of the year. Blanket 4F may be applied through irrigation systems, which may be supplied by a public water system only if water from the water system is discharges into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and to top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. Before beginning chemigation, always make sure that the air gap exists and that there is no drainage of the overflow of the reservoir tank.

Crop response to treatment with Blanket 4F will depend on the following factors:

- application rate and timing
- volume of water applied and pH
- sensitivity of crop type to treatment with Blanket 4F
- growth stage of the crop when irrigated
The amount of sulfozenoate available for uptake by weed species will increase as the pH of the soil increases. The pH of the soil must be accurately assessed using representative soil samples. In addition, irrigation with water having a high pH (i.e., alkaline water) following treatment, may increase the amount of available sulfozenoate for uptake by target species. However, if irrigation water pH exceeds 7.0, crop damage may result. The likelihood of an adverse response by crops will decrease as the growth stage of crops advances.

Application in Combination with Dry Fertilizers
1. Blanket 4F® may be impregnated and applied on a dry bulk fertilizer.
2. Only apply combinations of this product and dry fertilizer with ground equipment.
3. Do not apply via aerial application.
4. Applicators using dry fertilizer must follow state regulations on the preparation of the Blanket 4F®/fertilizer combination, including mixture preparation, storage, transportation, handling, and treatment.

Directions for Dry Fertilizer Impregnation:
1. Use the following method for impregnation:
   1. Ensure that sprayer nozzles are calibrated and positioned for uniform Blanket 4F coverage of the dry fertilizer during the mixture process.
   2. Make a slurry with Blanket 4F and water in a clean container.
   3. Once made, add the Blanket 4F/water slurry to the impregnation spray tank.
   4. Finish the solution by adding water as required.
2. For impregnation and application of Blanket 4F and dry fertilizer, use a dry bulk fertilizer blender such as a closed rotary-drum mixer that is fitted with appropriate spray application equipment.
3. Read the CLEANING APPLICATION EQUIPMENT section below prior to cleaning equipment used for impregnation, transportation, loading and application of the Blanket 4F®/fertilizer combination.
4. DO NOT attempt to impregnate coated ammonium nitrate or limestone with Blanket 4F as neither can absorb the herbicide.

Application Instructions for Blanket 4F® Impregnated dry fertilizers:
1. Dry fertilizer impregnated with Blanket 4F must be applied using a dry fertilizer spreader. The application equipment must be correctly calibrated for sufficient and uniform coverage of the soil surface. If treatment is not uniform, some areas may go untreated which may cause reduced control of target species.
2. Avoid overlapping applications, which may cause labeled use rates to be exceeded, and may cause adverse crop response.
3. Apply the dry fertilizer/Blanket 4F combination at a rate of at least 200 pounds of impregnated dry bulk fertilizer per acre in order to provide sufficient soil coverage.
4. See the appropriate crop specific section of this label for the use rate of Blanket 4F per acre exceptwhere
5. Next, use the following equation to calculate the amount of Blanket 4F that must be used to impregnate 2000 pounds (one ton) of dry bulk fertilizer:

   \[ \text{lbs. of Blanket 4F to be applied} \times \text{lbs. of Blanket 4F per acre} \times 2000 \]

   Example 1: If use rate of Blanket 4F is 8 lbs. per acre, and 200 lbs fertilizer will be applied per acre
   \[ (8) \times (2000) = 160 \text{ lbs Blanket 4F per ton of dry bulk fertilizer} \]

   Example 2: If use rate of Blanket 4F is 12 lbs. per acre, and 400 lbs fertilizer will be applied per acre
   \[ (12) \times (2000) = 240 \text{ lbs Blanket 4F per ton of dry bulk fertilizer} \]

Application in Combination with Liquid Fertilizers
1. Blanket 4F, when applied in combination with a liquid fertilizer will provide control of listed weeds.
2. Sufficient soil coverage is crucial for control of target species.
3. Fertilizer solutions that may be used as a carrier for Blanket 4F may be concentrate formulations as blended or diluted in water.

Directions for Liquid Fertilizer Combination:
1. The selected spray system must have the spray capacity to allow uniform application of the treatment solution, and must be capable of maintaining agitation in the spray tank throughout the mixture and application procedures.
2. Some spray application systems might need separate pumps to apply the solution and maintain agitation at the same time.
3. Prior to combining the liquid fertilizer and Blanket 4F in the application tank, carry out a compatibility test to ensure that the mixture is stable, homogenous and compatible. In a closed glass jar (1 quart size), add all mix partners, in their respective proportions. Mix, shake or mix the jar thoroughly. If mixture forms precipitates (lakes or sludge), gels, bails up or forms dry films or layers, this indicates incompatibility. Though signs of incompatibility will typically be seen within 5 minutes of mixing, mixture should be observed for approximately 90 minutes.
4. Combine Blanket 4F and the carrier liquid fertilizer as follows:
   1. Fill a clean spray tank with full of fertilizer solution.
   2. Begin agitation of the fertilizer solution.
   3. Use a clean container to create a slurry of Blanket 4F and water (equal parts of both)
   4. Add the slurry slowly to the spray tank, continuing agitation throughout.
   5. Rinse the slurry mix container and add rinse solution to spray tank.
   6. Finish filling spray tank to required level.
   7. Maintain agitation throughout. The Blanket 4F/water slurry must be mixed thoroughly prior to application.

   For best results, mix the Blanket 4F/water slurry, add the slurry using induction systems on the sprayer fill plumbing system.

   Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.
Application Instructions for Blanket 4F mixed with liquid fertilizers:

- This spray application solution must be applied immediately following preparation.
- Maintain agitation throughout the mixture and application.
- Do not store spray solution in the spray tank for an extended period of time, or overnight.
- A combination of Blanket 4F and liquid fertilizer must not be premixed in nurse tanks.
- Applicators/sellers of liquid fertilizer must follow state regulations for liquid fertilizers, including those regarding preparation, blending, registration, transportation, selling, treatment and storage.

Band Treatment Applications
Blanket 4F can be applied as a banded treatment application. When calculating rates for band treatment, apply the equivalent volume per acre rate for broadcast treatment by using the following equation:

\[
\text{Band Rate or Broadcast Rate (ft oz/acre)} \times \frac{\text{Band width (in inches)}}{\text{Row width (in inches)}}
\]

Mixing and Loading Instructions
- Blanket 4F may be applied on its own or in combination with other herbicides for a broader spectrum of weed control. Combinations with other products may not have been tested, therefore, carry out a compatibility test before mixing and applying. (In a closed glass jar (~1 quart size), add all mix partners, in their relative proportions. Invert, shake or mix the jar thoroughly. If mixture forms precipitates (foams or sludge), gels, balls up or forms oily films or layers, this indicates incompatibility. Through visual inspection, an incompatibility will typically be seen within 5 minutes of mixing; mixture should be observed for approximately 30 minutes.)
- Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.
- Spray equipment must be clean and free of product residue prior to mixing an application solution of Blanket 4F. Refer to Cleaning Directions below and to the cleaning directions of the product(s) previously applied.

Mix Blanket 4F using the following procedure:

1. Fill a clean sprayer tank with 1/3 water required for treatment.
2. Begin agitation.
3. Add a clean container to create a slurry of Blanket 4F and water.
4. Add the slurry slowly to the sprayer tank, continuing agitation throughout.
5. Rinse the slurry mix container and add rinseate solution to spray tank.
6. Finish filling spray tank to required levels.
7. Maintain agitation throughout. The Blanket 4F slurry must be thoroughly mixed prior to application.

* For best mixing of the Blanket 4F/water slurry, add the slurry using induction systems on the sprayer fill plumbing system.

The spray application solution must be applied immediately following mixing.

Maintain agitation throughout the application and application.
Do not store spray solution in the spray tank for an extended period of time, or overnight.

A tank mixture containing Blanket 4F must not be premixed in nurse tanks.

Cleaning Application Equipment
Adverse crop reaction may result if residues of this product are left in spray equipment following application. Spray equipment must be cleaned immediately after treatment with Blanket 4F and before applications with other products.

Use the following procedure:

1. Drain the spray application equipment, including tank, hoses, spray boom and nozzles.
2. Clean inside the sprayer tank with a high-pressure detergent, removing residues and silt.
3. Thoroughly rinse the spray tank.
4. Flush the spray system out using water, including hoses, spray boom and spray nozzles.
5. Conserve 3 gallons of ammonia (with a minimum of 3% active ingredient) in 100 gallons of water. Make sufficient cleaning solution to operate the spray application equipment for a minimum of 15 minutes so that the system is thoroughly flushed.
6. Remove sprayer tips, and all screens and filters and clean separately using the ammonia solution (step 5).
7. Leave the cleaning solution in the nozzles, spray boom and spray tank overnight (or during storage) to ensure thorough cleaning.
8. Drain the system completely prior to re-use. Use clean water to rinse flush nozzles, spray booms, hoses and the spray tank. Remove sprayer tips, and all screens and filters and clean separately using the ammonia solution (step 5).
9. Dispose of rinseate and excess cleaning solution in compliance with Federal, State, and local regulations and guidelines:

- Rinseate and cleaning solution must not be applied to sensitive crops.
- Spray application equipment must not be stored for any extended period while Blanket 4F application solution remains in the spray lines, nozzles, strainers, or boom plumbing.
- When application equipment has been idle or in storage, flush the nozzles and spray boom with clean water prior to use for application of product.
- If small amounts of this product remain in equipment after cleaning, Blanket 4F may be released during later applications, which may cause an adverse reaction from certain crops/for vegetation. The applicator is solely responsible for any damage caused by equipment that is not properly cleaned.
- Equipment must be flushed or drained near desirable plant species.
- Ensure that nozzles are not contaminated with application solution, rinseate or cleaning solution, including water that may be used for other crops, i.e. irrigation water.
SPRAY DRIFT REDUCTION ADVISORY

To avoid drift, do not apply when wind speeds exceed 10 mph. Do not exceed spray pressures of 40 psi unless specified by the manufacturer of drift reducing spray tips and nozzles.

Spray Drift Management:

Avoiding spray drift at the application site is the responsibility of the applicator and the grower.

The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-target movement from aerial applications. These requirements do not apply to forestry applications, public health uses or to applications of dry materials.

1. The distance of the outermost nozzles on the boom must not exceed 75% of the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.
3. Observe the regulations of the State where applications are made.
4. Applicators must observe and abide by the requirements of the Aerial Drift Reduction Advisory.

Information on Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage for pesticide performance. Applying large droplets reduces drift potential but will not prevent drift if applications are made improperly or under unfavorable environmental conditions. (See information on Wind, Temperature and Humidity, and Temperature Inversions in subsequent sections).

Controlling Spray Droplet Size

Volume - Use high flow rate nozzles to apply the greatest practical spray volume. Nozzles with higher rated flow generally produce larger droplets.

Pressure - When higher flow rates are needed, use higher flow rate nozzles rather than increasing spray pressure.

Do not exceed the nozzle manufacturer’s recommended pressures.

Lower pressure produces larger droplets in many types of nozzles.

Nozzle Orientation - For aerial application, the recommended practice is to orient nozzles so that the spray is released parallel to the airstream. This orientation usually produces larger droplets as compared to other nozzle orientations. Significant nozzle deflection from horizontal will reduce droplet size and increase drift potential.

Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low drift nozzles for both ground and aerial applications. Solid stream nozzles oriented straight back usually produce the largest droplets and the lowest drift potential in aerial applications.

Boom Length - For some aerial use patterns, reducing the effective boom length to less than 75% of the wingspan or rotor length may further reduce drift without reducing swath width.

Application Height - Aerial applications should not be made at a height greater than 10 feet above the top of the target plant canopy unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment - When aerial applications are made with a crosswind, the swath will be displaced downward. Therefore, on the upwind and downwind edges of the field, the applicator must compensate for this displacement by the path of the aircraft upwind. Swath adjustment or offset distance should increase when conditions favor increased drift potential (higher winds, smaller droplets, etc.).

Wind - Drift potential is lowest between wind speeds of 3-10 mph. However, factors, including droplet size, equipment type and temperature inversions determine drift potential at any given wind speed. Application should be avoided below 3 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they may potentially affect spray drift.

Temperature and Humidity - When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation.

Drift evaporation is most severe when conditions are both hot and dry.

Temperature Inversions - Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small-suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the low speed and variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common during conditions of limited cloud cover and little or no wind. They often begin to form as the sun sets and may often continue into the morning. The presence of a temperature inversion may be indicated by ground fog. However, if fog is not present, the movement of smoke from a ground source or an aircraft smoke generator can also identify inversions. Smoke that remains in layers and moves laterally in a concentrated cloud (under low speed wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

Sensitive Areas - The pesticide should only be applied when the wind is blowing away from sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops).

Blanket 4F Drift

If Blanket 4F solutions drift into non-target areas, contact with other plants/crops can cause adverse reaction. Initially, adverse crop/plant reaction may be in localized areas, depending on factors such as plant sensitivity to the application solution and spray solution droplet size. Lesions or spots caused by drift may or may not coincide. The effects of drift will not normally cause a lasting effect on plant growth, but may adversely affect the value of fruit or foliage where value is affected by appearance. Where plants are sensitive to Blanket 4F and drift is significant, defoliation may result.

Avoid drift of this product/solutions containing this product to non-target areas by taking adequate notice of the prevailing environmental conditions. Use appropriate and accurately calibrated application equipment and utilize treatment procedures that will minimize the risk of drift.

Misapplication of this product where label directions are not followed may result in drift. The applicator/user of this product is solely responsible for any misapplication of Blanket 4F.
REPLANTING AND ROTATIONAL CROPS

- During replanting, keep soil tillage to a minimum so that the herbicide barrier is preserved, thereby maximizing weed control.
- In the event that the planting of crops listed in label directions does not produce a stand, only crops specified in this label or the tank mix partner may be planted. Where there is a tank mixture, the most restrictive label directions must be followed.
- The planted area must not be retreated with Blanket 4F or any other product containing sulfentrazone.
- Do not plant crops in previously treated areas unless in full compliance with the Rotational Restrictions below.

**Crop Rotation**: Refer to the table below for the minimum interval from the time Blanket 4F was last applied until treated areas can be replanted with listed crops.

Crops can be planted at any point following the application of Blanket 4F.

- 15 month minimum rotational interval for sorghum where use rates are greater than 8 oz. of Blanket 4F per acre

- Certain crops have a rotational interval of more than 12 months because of sensitivity and the risk of crop injury. Conduct a representative bioassay of the target area on the rotational crop in order to assess the crop’s sensitivity to applications of this product.

**LISTED WEED SPECIES**

When applied in accordance with these label directions (alone or in a tank mixture), Blanket 4F will provide control of the following weed species (refer to crop specific section for more details):

- Amaranthus, leaf (Amaranthus sp.)
- Amaranthus, Palmer (Amaranthus palmeri)
- Amaranthus, Powell (Amaranthus Powell 9)
- Amaranthus, spiny (Amaranthus spinosus)
- Amaranthus, spicata (Amaranthus spicatus)
- Amaranthus, slender (Amaranthus tuberculatus)
- Anoda, spurred (Anoda cristata)
- Blackgrass, cutchweed (Galium aparine)
- Carpetweed (Melochia conjugata)
- Chihiwra, common (Euphorbia esula)
- Copperleaf, hop hornbeam (Acalypha ostryatfolia)
- Copperleaf, Virginia (Acalypha virginica)
- Crabgrass, large (Digitaria sanguinalis)
- Crabgrass, smooth (Digitaria ischaemum)
- Crabgrass, Southern (Digitaria sanguinalis)

- Croton, tropic (Croton glandulosus)
- Crownbeard, golden (Verbesina encelioides)
- Cogongrass, weedy (Bambusa vulgaris)
- Coptis, hedgehog (Cyperus compressus)
- Daisy, American (Eclipta alba)
- Dandelion, Common (Taraxacum officinale)
- Dock, curly (Rumex crispus)
- Eclipta (Eclipta prostrata)
- Flame, redstem (Sorghum bicolor)
- Flaxweed (Descurainia sophia)
- Galinsoga, hairy (Galinsoga ciliata)
- Goosegrass (Eragrostis tef)
- Groundcherry, clammy (Sectling)
- Phyla, heterophyla
LISTED WEED SPECIES (continued)

- Groundcherry, cutleaf (Physalis angulata)
- Jimsonweed (Datura stramonium)
- Kochia (ALS and Triazine Resistant) (Kochia scoparia)
- Ladysthumb (Polygonum perfoliatum)
- Lambquarters, common (Chenopodium album)
- Lettuce, miners (Montia perfoliata)
- Mallow, common (Malva neglecta Wall.)
- Mauvweed, Chamomile (Artemisia calacali L.)
- Milkweed, honeyvine (Ampelopsis abdixus)
- Morningglory, enfiited (Ipomoea indica or Ipomoea integriuscula)
- Morningglory, Kytelet (Ipomoea hederacea)
- Morningglorry, palmleaf (Ipomoea Wrightii)
- Morningglory, purple (Ipomoea Turbata)
- Morningglory, red (Ipomoea cocconea L.)
- Morningglory, scarlet (Ipomoea coonese)
- Morningglory, smallflower (Ipomoea pinnatifida var. pinnatifida)
- Morningglory, tall (Ipomoea purpurea)
- Mustard, tumble (Sinapis alba)
- Nightshade, black (Solanum nigrum)
- Nightshade, Eastern black (Solanum psycanthum)
- Nutseed, purple (Cyperus rotundus)
- Nutseed, yellow (Cyperus esculentus)
- Oatgrass, glaucous (Bromus glaucus)
- Panicum, fat (Panicum dichotomiflorum)
- Pigweed, redroot (Amaranthus retroflexus)
- Pigweed, smooth (Amaranthus hyhridus)
- Plantain, blackseed (Plantago nigella decaen)
- Plantain, narrow-leaved (Plantago lanceolata)
- Porcelain (Dolichos lens)
- Primrose (Oenothera biennis)
- Purslane, common (Portulaca oleracea)
- Redmaids (Calamagrostis canescens)
- Redroot (Kochia scoparia)
- Sedge, annual (Carex spp.)
- Senna, coffee (Cassia occidentalis)
- Sheephead (Capsella bursa-pastoris)
- Sida, prickly (Sida spinosa)
- Sida, Southern (Sida acuta)
- Signalgrass, broom (Brachylophonea)
- Smartweed, PA (sweeping)
- (Polygonum pensylvanicum)
- Smallflower (Cucumis sativus)
- Starth, bristle (Acanthospermium rupelum)
- Stringgrass (Eragrostis ciliaris)
- Tassel, yellow (Lunaria vulgare)
- Tasselflower, red (Euphorbia cotinifolia)
- Thistle, Russian (Salsola kali)
- Walchamp, common (Amaranthus retroflexus)
- Waterhemp, tall (Amaranthus tuberculatus)
- Waterprimrose, winged (Ludwigia speciosa)
- Wheatgrass (Panicum capillare)

**CABBAGE (Transplanted only)**

To control susceptible weeds, Blanket 4F can be applied to Cabbage (transplanted only) at the following times:

- In the fall (preplant), before spring growing season.
- In the spring (early preplant, preplant incorporated, preemergence).

When applying preplant to cabbage, the product may be applied only on 90, ID, MI, MN, MT, NE, ND, OR, SD, WA, WI, WY.

When applied as indicated on this label, the following weeds in cabbage will be controlled with Blanket 4F:
- Collards, purple
- Lambquarters, common
- Pigweed, redroot
- Waterhemp (common, tall)

See Listed Weed Species section of this label for information on additional weeds.

### Application Rates

**For Coarse Textured Soils**
- Less than 1.5% OM, apply 2.25 – 3.0 gal. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 2.0 – 2.9 gal. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 1.6 – 1.9 gal. oz. Blanket 4F per acre

**For Medium Textured Soils**
- Less than 1.5% OM, apply 3.0 – 4.5 gal. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 1.5 – 2.9 gal. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 1.6 – 2.0 gal. oz. Blanket 4F per acre

**For Fine Textured Soils**
- Less than 1.5% OM, apply 1.6 – 2.0 gal. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 0.6 – 2.9 gal. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 0.6 – 1.2 gal. oz. Blanket 4F per acre

OM – Organic Matter

Consult preceding information regarding coarse, medium or fine soil categories.

Use rate is inversely dependent on soil pH — use higher Blanket 4F rates with lower soil pH (6.0 and lower) and lower Blanket 4F rates with higher soil pH (greater than 7.0).

### Application Instructions

Apply amount of Blanket 4F indicated above to soil 24 to 72 hours after transplant. If applying preplant incorporated, do not incorporate the product into the soil after application. Destroying the herbicide barrier by mechanical incorporation can allow weeds to escape to occur.

If applying preemergence, applications before transplant can be broadcast or banded. Preemergence applications up to 72 hours after transplant should be banded treatment in the row middles.

If applying this product preplant incorporated in the spring, prior to transplantation, mix thoroughly or shallower incorporate the Blanket 4F into the soil. Inconsistent weed control could result if product is incorporated deeper than the maximum incorporation depth of 2 inches.

Moisture (in the form of rain or snow) after application will activate and move the product into the soil.

To prevent runoff of Blanket 4F from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.

### Tank Mixes

Blanket 4F can be split-applied or mixed with broadleaf herbicides or soil-applied herbicides labeled for use on cabbage to control emerged weeds or broaden the herbicide control spectrum. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.
**DRIY FIELD PEAS AND CHICKPEAS**

To control susceptible weeds, Blanket 4F can be applied to dry field peas and chickpeas at the following times:

- In the fall (preplant), before spring growing season (only in CO, ID, KS, MO, MT, NE, ND, OH, SD, WA, WI, WY)
- In the spring (early preplant, preplant incorporated, preemergence)

When applied as indicated on this label, the following weeds in dry field peas and chickpeas will be controlled with Blanket 4F:

- Amaranthus, Palmer
- Bidens, nodding
- Lambquarters, common
- Rhamnus, Eastern black
- Pigweed (red root, smooth)
- Sida, prickly
- Thistle, Russian
- Waterhemp (common, tall)

See Listed Weed Species section of this label for information on additional weeds.

</tr>
</tbody>
</table>

### CHW – Organic Matter

Consult preceding information regarding Coarse, Medium, or Fine soil categories. Use rate is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH rates (7.0 and below) and lower Blanket 4F rates with higher soil pH rates (greater than 7.0).

### Application Instructions

- **Apply amount of Blanket 4F indicated above to stubble or to the soil surface, in the fall, or in the spring from 60 days prior to planting up to 3 days after planting if seed furrow is completely closed and if seedlings have not broken the soil furrow.**

- **When applying preplant fall applications, do not incorporate the product into the soil after application.**

- **Destroying the herbicide barrier by mechanically incorporating can allow weed escapes to occur. Moisture (in the form of rain or snow) after application will activate and move the product into the soil. To prevent seedcraft of 'Staub' from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.**

- **When applying in the spring, early preplant greater than three weeks prior to planting, use the higher rate listed in 'Application Rates' for appropriate soil and organic matter type. Wait a minimum of 7 days after application to plant in coarse textured soils with less than 1.5% organic matter. Moisture (in the form of rain or snow) should occur after application to move the product into the soil. If dry conditions persist, a shallow incorporation may be needed.**

- **If applying this product preplant incorporated in the spring prior to planting reduced and conventional tillage of dry peas, mix thoroughly or shallowly incorporate the Blanket 4F into the soil. Inconsistent weed control could result if product is incorporated deeper than the minimum incorporation depth of 2 inches.**

### Tank Mixes

Blanket 4F can be split-applied or mixed with burndown herbicides or soil-applied herbicides labeled for use on dry peas to control emerged weeds or broaden the herbicide control spectrum. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.

### Important

- **Reduce rate of Blanket 4F on coarse textured soil with organic matter less than 1.5% and pH of 7.8 or higher, or on highly eroded soils, or in areas of calcerous outcroppings to minimize adverse crop response.**

- **Planting less than 1 inch in depth or inadequate seedlows can result in poor growing conditions (diseases, low temperature, soil compaction, excessive moisture) can also cause adverse crop response.**

- **Read and follow all precautions, instructions, rotational crop guidelines, replacing instructions, and any other information on this label prior to use.**

- **Consult with university or extension weed management specialists for information on using Blanket 4F with specific local varieties or cultivar of dry peas.**

- **Do not apply more than 0.25 lbs a.i. alachlor (600 lb. a.i., oz. per acre) per 12 month period. The 12 month period starts at the point of first application (including preplant fall application).**

- **Do not use on soils that contain less than 1% organic matter (soils classified as 'sand').**

- **Product is not to be incorporated any deeper than 2 inches.**

- **If seedlings are close to soil surface or crops has emerged, do not apply Blanket 4F.**

- **To prevent runoff of Blanket 4F from trowel or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.**
HORSERADISH

To control susceptible weeds, Blanket 4F can be applied to horseradish at the following times:
In the fall (preplant), before spring growing season.
In the spring (early preplant, preplant, preemergence)
When applying early preplant to horseradish, the product may be applied only in CO, ID, MT, MN, NE, NJ, OR, SD, WA, WI, WY.
When applied as indicated on this label, the following weeds in horseradish will be controlled with Blanket 4F:
- Lambsquarters, common
- Morningglory, ivyleaf
- Nutsedge, yellow
- Pigweed, red root
- Waterhemp (common, tall)
See Listed Weed Species section of this label for information on additional weeds.

<table>

  - Greater than 3.0% OM, apply 6.0 – 7.5 fl. oz, Blanket 4F per acre |
| For Medium or Fine Soils
  - Less than 1.5% OM, apply 3.0 – 4.5 fl. oz, Blanket 4F per acre
  - 1.5% to 3.0% OM, apply 5.0 – 8.0 fl. oz, Blanket 4F per acre
  - Greater than 3.0% OM, apply 6.0 – 8.0 fl. oz, Blanket 4F per acre |
| OM – Organic Matter     | • Read and follow all precautions, instructions, institutional label guidelines, re-planting instructions, and any other information on this label prior to use. |

Consult preceding information regarding Coarse, Medium or Fine soil categories. Use rates is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH (7.0 and lower) and lower Blanket 4F rates with higher soil pH (8.0 and higher).

Application Instructions

Apply amount of Blanket 4F indicated above to the soil surface. Unless applying preplant incorporated, do not incorporate the product into the soil after application. Destroying the herbicide barrier by mechanically incorporating can allow weed escapes to occur.

If applying preplant in the spring, product can be applied 60 days prior to planting up to planting.

If applying postemergence, applications before planting, and up to 5 days before crop emergence can be applied. After crop emergence, Blanket 4F can be applied to row middles as a banded treatment. If soil has more than 1% organic matter or is clay, higher rates of Blanket 4F should be used.

If applying this product preplant incorporated in the spring, prior to planting, mix thoroughly or shallowly incorporate the Blanket 4F into the soil. Inconsistent weed control could result if product is incorporated deeper than the maximum incorporation depth of 2 inches.

Moisture (in the form of rain or snow) after application will activate and move the product into the soil. To prevent runoff of Blanket 4F from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.

Tank Mixes

Blanket 4F can be split-applied or mixed with burndown herbicides, residual soil herbicides or other pesticides labeled for use on horseradish to control emerged weeds or broaden the pesticide control spectrum. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.
LIMA BEANS, SUCCULENT (TENNESSEE ONLY)

To control susceptible weeds, Blanket 4F can be applied preemergence to succulent lima beans (TN only).

Important:
- Read and follow all precautions, instructions, relational crop guidelines, replanning instructions, and any other information on this label prior to use.
- Consult with university or extension weed management specialists for information on using Blanket 4F with specific local varieties or cultivars of lima beans.
- Do not apply more than 0.1875 lb a.e. per acre in 12 month period. The 12 month period starts at the point of first application.
- Wait a minimum of 7 days after application to plant in coarse textured soils with less than 1.5% organic matter.
- Reduce rate of Blanket 4F on coarse textured soils with organic matter <1.5% and pH of 7.6 or higher, or on highly seeded soils, or in areas of noxious weed growth to minimize adverse crop response.
- Planting less than 1 inch in depth or inadequate seed furrow closure or poor growing conditions (disease, low temperature, soil compaction, excessive moisture) can also cause adverse crop response.
- Reduced weed control can occur if crop is experiencing extended periods of dry weather.
- Do not incorporate Blanket 4F into the soil when using product on lima beans (TN).

See Listed Weed Species section of this label for information on additional weeds.

Application Rates

For Coarse Textured Soils:
- Less than 1.5% OM, apply 2.25 - 3.75 fl. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 3.25 - 4.5 fl. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 3.75 - 5.0 fl. oz. Blanket 4F per acre

For Medium Textured Soils:
- Less than 1.5% OM, apply 3.25 - 6.0 fl. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 3.75 - 6.0 fl. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 4.5 - 6.0 fl. oz. Blanket 4F per acre

For Fine Textured Soils:
- Less than 1.5% OM, apply 3.75 - 5.0 fl. oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 4.5 - 6.0 fl. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 5.25 - 6.0 fl. oz. Blanket 4F per acre

OM – Organic Matter

Consult preceding information regarding Coarse, Medium or Fine soil categories.

Use rate is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH rates (7.0 and lower) and lower Blanket 4F rates with higher soil pH rates (greater than 7.0).

Application Instructions

Apply amount of Blanket 4F indicated above as a preemergence treatment. Apply product in at least 10 gallons of finished spray per acre. Make application with ground equipment.
## MINT

To control susceptible weeds, Blanket 4F can be applied to established stands of dormant mint or to newly planted mint, prior to emergence of new growth.

When applied as indicated on this label, the following weeds in mint will be controlled with Blanket 4F:

- Amaranth, Powell
- Bedstraw, catchweed
- Chamomile, mayweed
- Kochia (ALS and Teasle resistant)
- Lamb'squarters, common
- Moringa, fragile
- Morningglory, ivyleaf
- Nudgede, yellow
- Pigweed, redroot
- Shepherdspurse
- Tidestrip, yellow
- Thistle, Russian
- Waterhemp (common, tall)

See Listed Weed Species section of this label for information on additional weeds.

### Application Rates

**For Coarse Textured Soils**

- Less than 1.5% OM, apply 4.5 – 6.0 fl oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 6.0 – 8.0 fl oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 8.0 – 10.1 fl oz. Blanket 4F per acre

**For Medium Textured Soils**

- Less than 1.5% OM, apply 6.0 – 8.0 fl oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 8.0 – 10.1 fl oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 10.1 – 12.0 fl oz. Blanket 4F per acre

**For Fine Textured Soils**

- Less than 1.5% OM, apply 6.0 fl oz. Blanket 4F per acre
- 1.5% to 3.0% OM, apply 10.1 fl oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 12.0 fl oz. Blanket 4F per acre

OM = Organic Matter

Consult preceding information for Coarse, Medium or Fine soil categories.

Use rate is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH rates (7.0 and below) and lower Blanket 4F rates with higher soil pH rates (greater than 7.3).

### Application Instructions

Apply amount of Blanket 4F indicated above can be applied to dormant mint in the fall or spring, or pre-emergence to new mint plantings.

**Dormant Applications:** Application can be made to established stands of mint in the spring (after spring cultivation has been completed) or in the fall (after post-harvest cultivation has been completed), prior to emergence of new growth. Split applications of Blanket 4F can be used for pre-emergence control of winter and spring annual weeds.

**New Planting Applications:** When applying to new mint plantings, reduce rate of application by 25% of the rate listed for established plantings. Apply product pre-emergence to both weeds and mint.

### Tank Mixes

Blanket 4F can be mixed with burntorn herbicides labeled for use on mint to control emerged weeds. Enhanced control of emerged weeds can be obtained by also adding a surfactant to the tank mix.

Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.

### Important

- Read and follow all precautions, instructions, rotational crop guidelines, repotting instructions, and any other information on this label prior to use.
- Consult with University or extension weed management specialists for information on using Blanket 4F with specific local varieties or cultivars of mint.
- Do not apply more than 0.375 lbs sulfentrazone (12.0 fl oz. product) per acre per 12 month period. The 12 month period starts at the point of first application.
- Do not apply to mint fields once new growth has emerged, to avoid severe injury to plant tissue.
- Application to mint fields under stress (environmental, cultural, pests, disease) may result in crop injury. Apply to healthy mint fields only.
- To activate herbicide and move product into the soil, mulch (in the form of rain or overhead irrigation) is required after application.
SOYBEANS

To control susceptible weeds in soybeans, Blanket 4F can be applied to soybeans in the spring (preemergence or preplant incorporated). Blanket 4F can also be applied to soybeans in the fall, before spring planting of soybeans.

When applied as indicated on this label, the following weeds in soybeans will be controlled with Blanket 4F:

- Amaranth, Palmer
- Chiptalos, hophorphae
- Lamb quarters, common
- Morningglory, sp.
- Pigweed, sp.
- Pigweed, sp.
- Russian Thistle
- Waterhemp, sp.

See Listed Weed Species section of this label for information on additional weeds.

Application Rates

For Course Textured Soils
- Less than 1.5% OI, apply 4.5 to 6.0 oz. Blanket 4F per acre
- 1.5% to 3.0% OI, apply 6.0 to 8.0 oz. Blanket 4F per acre
- Greater than 3.0% OI, apply 8.0 to 10.0 oz. Blanket 4F per acre

For Medium Textured Soils
- Less than 1.5% OI, apply 6.0 to 8.0 oz. Blanket 4F per acre
- 1.5% to 3.0% OI, apply 8.0 to 10.0 oz. Blanket 4F per acre
- Greater than 3.0% OI, apply 10.0 to 12.0 oz. Blanket 4F per acre

For Fine Textured Soils
- Less than 1.5% OI, apply 8.0 oz. Blanket 4F per acre
- 1.5% to 3.0% OI, apply 10.0 oz. Blanket 4F per acre
- Greater than 3.0% OI, apply 12.0 oz. Blanket 4F per acre

OM - Organic Matter

Consult preceding information regarding Course, Medium or Fine soil categories.

Use rate is inversely dependent on soil pH - use higher Blanket 4F rates with lower soil pH rates (7.0 and lower) and lower Blanket 4F rates with higher soil pH rates (greater than 7.0).

Application Instructions

Apply amount of Blanket 4F indicated above to the soil surface in the spring, preplant incorporated or preemergence, or up to 5 days after planting (in the fall, apply 3 days after planting). For optimum results, fall applications should be applied as a part of weed control programs that include a preemergence herbicide application the following crop season, as needed. Apply in the fall when soil temperature is sustained at 55°F down to a depth of 4 inches. If using a ridge till production system, form ridges or beds prior to Blanket 4F application.

Application should follow the following data restrictions:

- Areas north of Interstate 90 - Apply after September 90
- Areas north of Interstate 70 - Apply after October 15
- Areas south of Interstate 70 - Do not make fall application

Blanket 4F can be applied by ground or aerial application. Mix Blanket 4F in water to make a minimum of 5 gallons of spray solution for aerial application or 10 gallons of spray solution for ground application. Be sure to use enough spray volume for acceptable soil coverage. Spray should be applied with nozzles that produce a minimum amount of fine droplets, but also generate optimum soil coverage.

If applying the product preplant incorporated, in the spring, thoroughly and shallowly incorporate the Blanket 4F into the soil. Incidental weed control can result if product is not uniformly incorporated, or incorporated deeper than the maximum incorporation depth of 6 inches.

Tank Mixes

Blanket 4F can be mixed with a broadleaf herbicide to control emerged weeds. For adequate weed control, blanker 4F can be mixed with a broadleaf herbicide to control emerged weeds. For adequate weed control, blanket 4F can be mixed with or followed by an application of a postemergence herbicide. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.

Important

- Adverse or poor growing conditions (diseases, cool weather, pH of 7.5 and above, prolonged and excessive moisture, poor agronomic practices) can cause undesirable crop response (such as discoloration or stunting). Normal growing conditions will lessen and diminish these effects.
- Read and follow all precautions, instructions, rotational crop guidelines, relaying instructions, and any other information on this label prior to use.
- Consult with university or extension weed management specialists for information on using Blanket 4F with specific local varieties or cultivars of soybeans.
- Do not apply more than 0.375 lbs. sulfentrazone (12.0 fl oz. product) per acre per 12 month period. If making a preplant fall application, the 12 month period starts at this point.
- Do not use on soils that contain less than 1% organic matter (soils classified as 'sand').
- To prevent runoff of Blanket 4F from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.
- Do not apply after soybean seed has germinated.
**SUGARCANE**

To control susceptible broadleaves, grasses and sedges in sugarcane, Blanket 4F can be applied to sugarcane at the following times:

- Preemergent (newly planted) - broadcast or banded, aerial or ground application
- Layby - directed spray, ground application

When applied as indicated in this label, the following weeds in sugarcane will be controlled with Blanket 4F:

- Morningglory (entireleaf, leafsalt, red or tall)
- Pigweed, red root
- Nutsedge, yellow

See Listed Weed Species section of this label for information on additional weeds.

</table>

OM – Organic Matter

Consult preceding information regarding Coarse, Medium or Fine soil categories.

Use rate is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH rates (7.3 and lower) and lower Blanket 4F rates with higher soil pH rates (greater than 7.3).

Application Instructions

Apply amount of Blanket 4F indicated above to random or newly planted sugarcane (preemergent) or to sugarcane at lay-by timing (directed spray).

Blanket 4F can be applied aerially (for preemergent application), by ground equipment (preemergent application or lay-by application), in a minimum of 5 gallons of spray per acre or by ground equipment (preemergent application or lay-by application), in a minimum of 15 gallons of spray per acre.

For all applications, use the higher rate on soils with organic matter content higher than 2% or on clay soils.

Tank Mixes:

Blanket 4F can be applied with other herbicides or insecticides registered for use in sugarcane. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.
SUNFLOWERS

To control or suppress weeds in sunflowers, Blanket 4F can be applied at the following rates:
In the fall (preplant), before spring planting of sunflowers (fall applications allowed only in ND, SD, MT, WY, CO, NE, KS)
In the Spring Early Preplant, Preemergence, Preplant Incorporated, prior to planting up to 3 days after planting
When applied as indicated on this label, the following weeds in sunflowers will be controlled with Blanket 4F:

- Amaranth, Palmer
- Kochia (ALS and Triazine Resistant)
- Morningglory (velvetchain and tall)
- Pigweed (red, rosy, smooth)
- Thistle, Russian

See Listed Weed Species section of this label for information on additional weeds.

Application Rates
For Coarse Textured Soils:
- Less than 1.5% OM, apply 3.0 to 3.75 ft. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 3.0 to 4.5 ft. oz. Blanket 4F per acre
- Greater than 6.0% OM, apply 3.75 to 6.0 ft. oz. Blanket 4F per acre

For Medium Textured Soils:
- Less than 1.5% OM, apply 3.0 to 4.5 ft. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 3.75 to 6.0 ft. oz. Blanket 4F per acre
- Greater than 6.0% OM, apply 4.5 to 6.0 ft. oz. Blanket 4F per acre

For Fine Textured Soils:
- Less than 1.5% OM, apply 3.75 to 5.25 ft. oz. Blanket 4F per acre
- Greater than 3.0% OM, apply 5.0 to 7.5 ft. oz. Blanket 4F per acre
- Greater than 6.0% OM, apply 6.0 to 8.0 ft. oz. Blanket 4F per acre

OM – Organic Matter

Consult preceding information regarding Coarse, Medium, or Fine soil categories.

Use rate is inversely dependent on soil pH – use higher Blanket 4F rates with lower soil pH rates (7.0 and lower) and lower Blanket 4F rates with higher soil pH rates (greater than 7.0).

Application Instructions:
Apply amount of Blanket 4F indicated above to subsoil or to the soil surface preplant in the fall (fall use only in ND, SD, MT, WY, CO, NE or KS), or early preplant, preemergence or preplant incorporated in the spring prior to planting up to 3 days after planting. If seed furrows are closed completely, and seedings have not been broken on the soil surface, for applications in the fall, use a medium rate that for your soil type and for applications in the spring greater than three weeks prior to planting, use a high rate range for your soil type, because of the extended time period between application and planting. Plant a minimum of 7 days after application if soil is coarse textured and contains less than 1.5% organic matter.

If applying preplant product incorporated in the spring, to reduced or conventional tillage sunflowers, mix thoroughly or shallowly incorporate the Blanket 4F into the soil. Inconsistent weed control could result if product is incorporated deeper than the maximum incorporation depth of 2 inches.

Moisture in the form of rain or snow should occur after application to move the product into the soil. If dry conditions persist, a shallow incorporation may be needed.

For maximum weed control, disturb the soil surface as little as possible after application. Destroying the herbicide barrier by mechanically incorporating can allow weed escapes to occur. To prevent runoff of Blanket 4F from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.

Tank Mixes:
Blanket 4F can be tank mixed or solo-applied with broadleaf herbicides such as paraquat or glyphosate at the full labeled rate to control or suppressed weeds. Blanket 4F can be tank mixed with other herbicides labeled for use on sunflowers to enhance weed control and suppression. Read and follow the label of each tank mix product used for precautionary statements, directions for use, rates and timings, and other restrictions.

Important:
- Reduce rate of Blanket 4F on coarse textured soil with organic matter less than 1.5% and pH of 7.0 or higher, or on highly eroded soils, or in areas of cankerous outcroppings to minimize adverse crop response.
- Planting less than 1 inch in depth or inadequate seed furrow closure or poor growing conditions (diseases, low temperature, soil compaction, excessive moisture) can also cause adverse crop response.
- Read and follow all precautions, instructions, rotational crop guidelines, replanting instructions, and any other information on this label prior to use.
- Consult with university or extension weed management specialists for information on using Blanket 4F with specific local varieties or cultivars of sunflowers.
- Do not apply more than 0.05 lb a.i. a.i. product per acre per 12 month period. The 12 month period starts at the point of first application.
- To prevent runoff of Blanket 4F from snowmelt or rain, do not apply Blanket 4F to soils that are frozen or have an existing snow cover.
- Do not use on soils that contain less than 1% organic matter soils classified as "sand".
- Product is not to be incorporated any deeper than 2 inches.
TOBACCO (Burley, Flue-Cured and Dark)

Blan ket 4F can be applied preemergence or preplant incorporated to tobacco transplants, for control of susceptible weeds.

When applied as indicated on this label, the following weeds in tobacco will be controlled with Blan ket 4F:

- Amaranthus, sp.
- Fleece, redstem
- Galinsoga, hairy
- Lambquarters, common
- Morningglory (leaf, tall)
- Pigweed (redroot, smooth)
- Sida, prickly
- Signalgrass, broadleaf
- Smartweed, Pennsylvania

See Listed Weed Species section of this label for information on additional weeds.

Application Rates

For Coarse Textured Soils
- Less than 1.0% OM, apply 4.5 - 6.0 lb. Gal. Blan ket 4F per acre
- 1.5% to 3.0% OM, apply 6.0 - 8.0 lb. Gal. Blan ket 4F per acre
- Greater than 3.0% OM, apply 8.0 - 10.1 lb. Gal. Blan ket 4F per acre

For Medium Textured Soils
- Less than 1.0% OM, apply 6.0 - 8.0 lb. Gal. Blan ket 4F per acre
- 1.5% to 3.0% OM, apply 8.0 - 10.1 lb. Gal. Blan ket 4F per acre
- Greater than 3.0% OM, apply 10.1 - 12.0 lb. Gal. Blan ket 4F per acre

For Fine Textured Soils
- Less than 1.5% OM, apply 8.0 lb. Gal. Blan ket 4F per acre
- 1.5% to 3.0% OM, apply 10.1 lb. Gal. Blan ket 4F per acre
- Greater than 3.0% OM, apply 12.0 lb. Gal. Blan ket 4F per acre

OM = Organic Matter

Consult prescribing information regarding Coarse, Medium or Fine soil categories. Use rate is inversely dependent on soil pH—use higher Blan ket 4F rates with lower soil pH rates (7.0 and lower) and lower Blan ket 4F rates with higher soil pH rates (greater than 7.0).

Application Instructions

Amount of Blan ket 4F indicated above can be broadcast applied to the soil surface preplant or preplant incorporated, in a minimum of 10 gallons of finished product per acre, from 14 days to 12 hours before transplanting tobacco.

If applying the product preplant incorporated, shallowly incorporate the Blan ket 4F into the soil. Inconsistent weed control can result if product is not uniformly incorporated, or incorporated deeper than the maximum incorporation depth of 2 inches.

When applying on Non-Bedded Fields (i.e., raised beds not formed prior to transplanting) and Blan ket 4F is surface applied—use light finishing equipment to remove equipment tracks from the field after application, and do not disturb the soil to a depth greater than 2 inches. Reduced or unacceptable weed control could occur in the drift if pre-transplant surface applications aren't followed by timely cultivations.

When applying on Bedded Fields (i.e., raised beds formed prior to transplanting), any digging or incising of beds prior to transplanting must occur prior to Blan ket 4F application. Blanket 4F can concentrate in the bed if the product is not mixed thoroughly and uniformly into the soil, or incorporated deeper than the maximum incorporation depth of 2 inches.

New tobacco transplants can be replanted if the first transplant does not produce a uniform stand. If replanting:
- Do not re-treat fields with a second application of Blan ket 4F or any other sulfonamide product.
- Do not return beds prior to replanting. Plant new transplants into existing beds that have already been transplanted with Blan ket 4F.

Tank Mixes

Blan ket 4F can be mixed with a grass herbicide (or grass herbicide can be applied separately), to give optimum broad spectrum grass weed control. Read and follow the label of each product used for precautionary statements, directions for use, rates and timings, and other restrictions.

Important

- Adverse or poor growing conditions (disease, cold weather, unfavorable pH soils, excessive moisture or drought, poor agronomic practices or other unfavorable conditions) can cause undesirable crop response in tobacco transplanting, particularly if they are weakened and are in conditions of waterlogged or saturated soil or poor drainage. Normal growing conditions will lessen and diminish these effects.
- If transplanting is too shallow, heavy rainfall occurs after transplant, temporary stunting of transplants can occur.
- Observe responsible transplanting practices to avoid exposure (i.e., washing or culturing) of transplant to treated soil. Necrosis typically localized and inconsequential can be caused if treated soil is splashed onto tobacco leaves.
- Read and follow all precautions, instructions, rotational crop guidelines, replanting instructions, and any other information on this label prior to use.
- Consult with university or extension weed management specialists for information on using Blan ket 4F with specific local varieties or cultivars of tobacco, and for agronomic recommendations for local conditions and specific tobacco varieties.
- Do not apply Blan ket 4F to shade grown tobacco, tobacco seeding beds or tobacco in greenhouses.
- To avoid unacceptable injury, do not apply Blan ket 4F post transplant.
- Do not use on soils that contain less than 1% organic matter (soils classified as "sand").
- Mix thoroughly and uniformly and do not incorporate product deeper than the maximum incorporation depth of 2 inches to avoid inconsistent weed control or concentrating Blan ket 4F into the soil (which can result in crop injury). Additionally, do not plant other crops that could concentrate Blan ket 4F into the soil.
- Do not apply more than 0.375 lb. sulfonamide (12.0 lb. actual product) per acre per 12-month period. The 12 month period start at the point of first application.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Do not use or store around the home.

PESTICIDE STORAGE: Store product in original container only, away from other pesticides, fertilizer, food or feed. Store in a cool, dry place and avoid excess heat.

PESTICIDE DISPOSAL: Waste resulting from the use of this product may be disposed of at an approved waste disposal facility.

CONTAINER HANDLING: Nonrefillable container.

Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. For containers greater than 5 gallons: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank or store inate for later use or disposal. Repeat this procedure two more times. (For containers 5 gallons or less): Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store inate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Triple rinse (or equivalent). Then offer for recycling if available, or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

CONTAINER HANDLING: Refillable container.

Refill this container with pesticides only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents into application equipment or mix tank. Fill the container about 10% full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinse into application equipment or inate collection system. Repeat this rinsing procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by state and local authorities.

Steps to be taken in case material is released or spilled:
In case of release or spill, isolate area and keep unprotected persons or animals away from area. Dune and contain the spill with inert material (sand, earth, cat litter or commercial clay, etc.) and transfer liquid and solid materials to separate containers for disposal. Remove contaminated clothing and was affected skin areas with soap and water. Wash clothing before re-use. Keep the spill out of all sewers and open bodies of water.

LIMITATION OF WARRANTY AND LIABILITY

IMPORTANT: READ BEFORE USE. Read the entire Directions for Use, Conditions of Warranties and Limitations of Liability before using this product. If these terms and conditions are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following Disclaimer of Warranties and Limitations of Liability.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Ineffectiveness, injury, and other unintended consequences may result because of such factors as manner of use or application (including misuse), the presence of other materials, weather conditions, and other unknown factors, all of which are beyond the control of Tenvilz, Inc. All such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, Tenvilz, Inc. makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond statements on this label.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, neither Tenvilz, Inc., the manufacturer, nor the Seller shall be liable for any indirect, special, incidental or consequential damages resulting from the use, handling, application, storage, or disposal of this product. To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use, handling, application, or storage of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid.
