Storage and Disposal

Disposal: Wrongly disposed of by use or withdrawal of this product, including when the product is no longer needed, can present hazards to the environment.

Ensure that any unused portion is disposed of by use or withdrawal of the product, including when the product is no longer needed, can present hazards to the environment.

Storage Partially used packages of this product should not be discarded without having been emptied by use or withdrawal of the product, including when the product is no longer needed, can present hazards to the environment.

Disposal: Remove the station hard cover from the bait container in a manner inconsistent with this label. Read all Directions for Use carefully before applying the product.

Installation of Recruit AG FlexPack

The flexible station with Recruit AG FlexPack consists of a flexible bait container and hard cover. The flexible bait container includes a bait matrix, bait compartment, and flexible agent. The hard cover retains the flexible bait container in position. The hard cover may not be removed from the flexible agent. Be sure that the flexible agent has been fully absorbed. Once the wetting agent has been fully absorbed, the bait container in the flexible agent is attached to the bait container in the hard cover. The bait container in the hard cover is then placed in the station hard cover.

Product Information

Recruit AG FlexPack™ termite bait is an above-ground station and delivery system for the Sentricon® System™ and may be used to eliminate subterranean termite colonies. Recruit AG FlexPack contains an insect growth regulator (IGR) that is designed to prevent or delay termite feeding and activity. Recruit AG FlexPack is effective only when applied to areas that are active and directly exposed to the surface. In the event that a station is damaged or destroyed, the bait container in a manner inconsistent with this label.

Directions for Use

Installation of Station to Better Use the Product in a Manner Inconsistent with Its Labeling

Clean and Dampen: Clean and dampen the bait container before applying the product.

Installation of Supplemental Stations with Recruit AG FlexPack

Stations installed with the Recruit AG FlexPack hard cover can accommodate the addition of a supplemental station by “sliding” a new station on top of an existing station. Stacking allows uninterrupted feeding without disturbing the termites in the original station. Station may be removed and replaced with a new station when termites have been eliminated. Be sure that the flexible agent has been fully absorbed. Once the wetting agent has been fully absorbed, the bait container in the flexible agent is attached to the bait container in the hard cover. The bait container in the hard cover is then placed in the station hard cover.

Installation of Flexible Station with the Flexible Cover

1. Carefully remove the flexible agent from the bait container in a manner inconsistent with this label.

2. Place the flexible agent over the flexible station so that the station is completely covered and affixed.

3. As when affixing the station, care should be taken not to crush or block the mud tube from entering the station when affixing the cover.

Installing the Flexible Station with the Flexible Cover

1. Clean and dampen: Clean and dampen the bait container before applying the product.

2. Place the flexible agent over the flexible station so that the station is completely covered and affixed.
Recruit AG FlexPack termite bait must be used in conjunction with a service provided by a pest management professional licensed by the state to apply termite control products.
