A non-selective herbicide for post emergence broadcast use on canola, corn, cotton, and soybean designated as LibertyLink® or glufosinate tolerant. Willowood Glufosinate 280SL (OT) may be used for weed control in non-LibertyLink or non-glufosinate tolerant cotton when applied with a hooded sprayer in-crop. Willowood Glufosinate 280SL (OT) may also be applied as a broadcast burndown application before planting or prior to emergence of any conventional or transgenic variety of canola, sweet corn*, corn, cotton, olive, rice*, soybean or sugar beet. Willowood Glufosinate 280SL (OT) may also be applied for potato vine desiccation.

*Not for use in California.

**ACTIVE INGREDIENT:**

Glufosinate ammonium* ....................................................................................................24.5%**

**OTHER INGREDIENTS:** .....................................................................................................75.5%

**TOTAL:** ........................................................................................................................ 100.0%

*CAS Number 77182-82-2
**Equivalent to 2.34 pounds of active ingredient per U.S. gallon.

SEE INSIDE LABEL BOOKLET FOR FIRST AID, PRECAUTIONARY STATEMENTS AND DIRECTIONS FOR USE INCLUDING STORAGE AND DISPOSAL INSTRUCTIONS.

EPA REG. NO. 87290-41

MANUFACTURED FOR:
Willowood, LLC
1600 NW Garden Valley Blvd. #120
Roseburg, OR 97471

NET CONTENTS: 2.5 Gallons
# FIRST AID

| **IF IN EYES:** | • Hold eye open and rinse slowly and gently with water for 15-20 minutes.  
| | • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  
| | • Call a poison control center or doctor for treatment advice. |
| **IF ON SKIN OR CLOTHING:** | • Take off contaminated clothing.  
| | • Rinse skin immediately with plenty of water for 15-20 minutes.  
| | • Call a poison control center or doctor for treatment advice. |
| **IF SWALLOWED:** | • Call a poison control center or doctor immediately for treatment advice.  
| | • Have person sip a glass of water if able to swallow.  
| | • Do not induce vomiting unless told to by a poison control center or doctor.  
| | • Do not give anything to an unconscious person. |

## HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For general information on product use, etc., call the National Pesticides Information Center (NPIC) at 1-800-858-7378. For emergencies, call the poison control center 1-800-222-1222.

**NOTE TO PHYSICIAN:** If this product is ingested, endotracheal intubation and gastric lavage should be performed as soon as possible followed by charcoal and sodium sulfate administration.
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
WARNING
Causes substantial but temporary eye injury. Harmful if absorbed through skin. Harmful if swallowed. Do not get in eyes or on clothing. Wear protective eyewear (goggles, face shield, or safety glasses). Avoid contact with skin.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton® ≥ 14 mils
- Shoes and socks
- Protective eyewear (goggles, face shield or safety glasses)

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Mixers/loaders supporting aerial applications must wear a dust/mist filtering respirator (MSHA/NIOSH approval number prefix TC-21C) or a NIOSH approved respirator with any N, R, P or HE filter.

USER SAFETY RECOMMENDATIONS
Users should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENGINEERING CONTROL STATEMENT
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.
ENVIRONMENTAL HAZARDS
Do not apply directly to water, or to areas where surface water is present. Do not apply to intertidal areas below the mean high water mark. Do not contaminate water by cleaning of equipment or disposal of equipment washwaters.

This pesticide is toxic to vascular plants and should be used strictly in accordance with the drift and run-off precautions on this label in order to minimize off-site exposures.

Under some conditions, this product may have a potential to run off to surface water or adjacent land. Where possible, use methods which reduce soil erosion, such as no till, limited till and contour plowing. These methods also reduce pesticide run-off. Use of vegetation filter strips along rivers, creeks, streams, wetlands, etc., or on the downhill side of fields where run-off could occur to minimize water run-off is recommended.

PHYSICAL OR CHEMICAL HAZARDS
Do not use with or store near oxidizing agents since hazardous chemical reaction may occur.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not use this product until you have read the entire label. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

In the State of New York Only: Not For Use In Nassau and Suffolk Counties.
AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours with the exception of sweet corn irrigation activities which has a 4 day REI.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls worn over short-sleeved shirt and short pants
- Chemical-resistant gloves such as barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton® ≥ 14 mils
- Chemical-resistant footwear plus socks
- Protective eyewear (goggles, face shield or safety glasses)

IMPORTANT CROP SAFETY INFORMATION
READ BEFORE USING THIS PRODUCT

Willowood Glufosinate 280SL (OT) may be applied as a burndown treatment prior to planting or prior to emergence of any conventional or transgenic variety of canola, sweet corn*, corn, cotton, olive, rice*, soybean, or sugar beet.

*Not for use in California.

Post emergence row crop applications of Willowood Glufosinate 280SL (OT) may be made only to crops tolerant to the active ingredient in this product (such as LibertyLink crops).

The basis of selectivity of Willowood Glufosinate 280SL (OT) in glufosinate-resistant crops is the presence of a gene tolerant to glufosinate. Crops not containing this gene will not be tolerant to Willowood Glufosinate 280SL (OT) and severe crop injury and/or death may occur. Do not allow spray to contact foliage or green tissue of desirable vegetation other than the crops tolerant to the active ingredient in this product.

Willowood Glufosinate 280SL (OT) may be applied to conventional or other transgenic cotton not tolerant to the active ingredient in Willowood Glufosinate 280SL (OT) using a hooded sprayer.
PRODUCT INFORMATION
Willowood Glufosinate 280SL (OT) is a water soluble herbicide for application as a foliar spray for the control of a broad spectrum of emerged annual and perennial grass and broadleaf weeds in canola, corn, cotton, and soybean designated as LibertyLink or glufosinate tolerant. Willowood Glufosinate 280SL (OT) may be applied for potato vine desiccation. Willowood Glufosinate 280SL (OT) may also be applied as a broadcast burndown application before planting or prior to emergence of any conventional or transgenic variety of canola, sweet corn*, corn, cotton, olive, rice*, soybean, or sugar beet.

*Not for use in California.

Willowood Glufosinate 280SL (OT) is only foliar active with little or no activity in soil. Weeds that emerge after application will not be controlled. Apply Willowood Glufosinate 280SL (OT) to actively growing weeds as described in the Weed Control Recommendations for Row Crops section to get maximum weed control. Uniform thorough spray coverage is necessary to achieve consistent weed control. Necrosis of leaves and young shoots occur within 2 to 4 days after application under good growing conditions.

- Willowood Glufosinate 280SL (OT) is rainfast four (4) hours after application to most weed species, therefore, rainfall within four (4) hours may necessitate retreatment or may result in reduced weed control.
- Application should be made between dawn and 2 hours before sunset to avoid the possibility of reduced lambsquarters and velvetleaf control.
- Consult your local Cooperative Extension Service or Willowood, LLC representative for guidelines on the optimum application timing for Willowood Glufosinate 280SL (OT) in your region.
- Weed control may be reduced if application is made when heavy dew, fog, and mist/rain are present, or when weeds are under stress due to environmental conditions such as drought, cool temperatures, or extended periods of cloudiness.
- To maximize weed control, do not cultivate from 5 days before an application to 7 days after an application.

ROTATIONAL CROP RESTRICTIONS*
Rotational crop planting intervals following application of Willowood Glufosinate 280SL (OT) are listed below. Failure to comply with these restrictions may result in illegal residues in rotated crops.

<table>
<thead>
<tr>

*See Application Directions for Potato Vine Desiccation for Rotational Crop Restrictions specifically after Willowood Glufosinate 280SL (OT) applications to potatoes.
Integrated Weed Management

The active ingredient in Willowood Glufosinate 280SL (OT) is glufosinate ammonium, which is a glutamine synthetase inhibitor (Group 10). Integrated weed management guidelines promote an economically viable, environmentally sustainable, and socially acceptable weed control program regardless of the herbicide(s) used. The highlights of a successful integrated weed management include:

1) Correctly identify weeds and look for trouble areas within field to identify resistance indicators.
2) Rotate crops.
3) Start the growing season with clean fields.
4) Rotate herbicide modes of action by using multiple modes of action during the growing season and apply no more than two applications of a single herbicide mode of action to the same field in a two year period. One method to accomplish this is to rotate herbicide tolerant trait systems.
5) Apply listed rates of herbicides to actively growing weeds at the correct time with the right application techniques.
6) Control any weeds that may have escaped the herbicide application.
7) Thoroughly clean field equipment between fields.

Contact your local agronomic advisor for more specific information on integrated weed management for your area.

WEED CONTROL FOR ROW CROPS

Rates in ounces of formulated product per acre for the control of weeds at selected heights are shown in the weed control tables in weed populations with mixed species; apply at a rate needed for the species that requires the highest rate.

<sup>a</sup>In cotton, Willowood Glufosinate 280SL (OT) may be applied at 29 fl. oz/A, three times per acre per year.

<sup>b</sup>Do not apply more than 22 fl. oz/A of Willowood Glufosinate 280SL (OT) post emergence in a single application to canola and corn.

S Indicates suppression

<sup>1</sup> Volunteer LibertyLink or glufosinate tolerant crops from the previous season will not be controlled.

<sup>2</sup> For applications to corn, tank mixing with atrazine may enhance weed control of this species.

<sup>3</sup> May require sequential applications for control.

NR Not recommended.

*Suppression Only
**See the Application Directions for Use on Cotton section of this label for additional use rates.

**APPLICATION AND MIXING PROCEDURES**
Do not use flood jet nozzles, controlled droplet application equipment, or air assisted spray equipment. Uniform thorough spray coverage is important to achieve consistent weed control.

**Ground Application**
Refer to the *Rate Tables* for proper application rates. Do not apply when winds are gusty, or when conditions will favor movement of spray particles off the desired spray target. To avoid drift and ensure consistent weed control, apply Willowood Glufosinate 280SL (OT) with the spray boom as low as possible while maintaining a uniform spray pattern. Willowood Glufosinate 280SL (OT) should be applied broadcast in a minimum of 10 gallons of water per acre using a minimum spray pressure of 40 psi and a maximum ground speed of 10 mph. The use of 80 degree or 110 degree flat fan nozzles is highly recommended for optimum spray coverage and canopy penetration. Application of the spray at a 45 degree angle forward will result in better spray coverage. **Under dense weed/crop canopies a broadcast rate of 15-20 gallons of water per acre should be used so that thorough spray coverage will be obtained.** DO NOT use raindrop nozzles. Boom height should be based on nozzle manufacturer recommendations. See the Spray Drift Management section of this label for additional information on proper application of Willowood Glufosinate 280SL (OT).
**Aerial Application**
Poor coverage will result in reduced weed control. For optimal weed control, apply Willowood Glufosinate 280SL (OT) in a minimum of 10 gallons per acre. Apply Willowood Glufosinate 280SL (OT) using nozzles and pressures that generate MEDIUM (about 300 to 400 microns) spray droplets category as reported by the nozzle manufacturer and in accordance to ASABE S 572 based upon the selected air speed. Do not use nozzles and pressures that result in COARSE sprays. FINE sprays must also be avoided to minimize spray drift risk. See the Spray Drift Management section of this label for additional information on proper application of Willowood Glufosinate 280SL (OT).

**COMPATIBILITY TESTING**
If Willowood Glufosinate 280SL (OT) is to be mixed with pesticide products not listed on this label, test the compatibility of the intended tank mixture prior to mixing the products in the spray tank. The following procedure assumes a spray volume of 25 gallons per acre. For other spray volumes, adjust the amount of the water used accordingly. Check compatibility as follows:

1. Place 1.0 pint of water from the source that will be used to prepare the spray solution in a clear 1 quart jar.
2. For each pound of dry tank mix partner to be applied per acre, add 1.5 teaspoons to the jar.
3. For each 16 fl. oz. of a liquid tank mix partner to be applied per acre, add 0.5 teaspoon to the jar.
4. For each 16 fl. oz. of Willowood Glufosinate 280SL (OT) to be applied per acre, add 0.5 teaspoon to the jar.
5. After adding all the ingredients, place a lid on the jar and tighten. Invert 10 times to mix.
6. Let the mixture stand for 15 minutes, and evaluate the solution uniformity and stability. Look for separation, large flakes, precipitates, gels, heavy oily film on the jar, or other signs of incompatibility. If the tank mix partners are not compatible, do not use the mixture in a spray tank.
7. After compatibility testing is complete, dispose of any pesticide wastes in accordance with the Storage and Disposal section of this label.
**MIXING INSTRUCTIONS**

**Tank Mix Instructions**

Willowood Glufosinate 280SL (OT) may be applied in tank mix combinations with labeled rates of other products provided these other products are labeled for the timing and method of application for the crop to be treated. The tank mix partner must be used in accordance with the label limitations and precautions. No label dosage rates may be exceeded. Willowood Glufosinate 280SL (OT) cannot be mixed with any product containing a label prohibition against such mixing. Refer to the specific crop section for rates and restrictions.

Willowood Glufosinate 280SL (OT) must be applied with properly calibrated and clean equipment. Willowood Glufosinate 280SL (OT) is formulated to mix readily in water. Prior to adding Willowood Glufosinate 280SL (OT) to the spray tank, ensure that the spray tank is thoroughly clean, particularly if a herbicide with the potential to injure crops was previously used (see Cleaning Instructions).

Mix Willowood Glufosinate 280SL (OT) with water to make a finished spray solution as follows:

1. Fill the spray tank half full with water.
2. Start agitation.
3. If mixing with a flowable/wettable powder tank mix partner: Prepare a slurry of the proper amount of the product in a small amount of water. Add the slurry to the spray tank.
4. Add the appropriate amount of ammonium sulfate (AMS) to the spray tank.
5. If mixing with a liquid tank mix partner, add the liquid mix partner next.
6. Complete filling the spray tank with water.
7. Add the proper amount of Willowood Glufosinate 280SL (OT) and continue agitation.
8. If foaming occurs, use a silicone based antifoam agent.

Ensure that all spray system lines including pipes, booms, etc., have the correct concentration of spray solution by flushing out the spray system lines before starting the crop application.

If tank mix partners recommended on this label are added, maintain good agitation at all times until contents of the tank are sprayed. If the spray mixture is allowed to settle, thorough agitation is required to resuspend the mixture before spraying is resumed. Keep bypass line on or near bottom of tank to minimize foaming. Screen size in nozzles or line strainers must be 50 mesh or larger.

**CLEANING INSTRUCTIONS**

Before using Willowood Glufosinate 280SL (OT), thoroughly clean bulk storage tank, refillable tank, nurse tanks, spray tank, lines, and filter, particularly if a herbicide with the potential to injure crops was previously used. Equipment should be thoroughly rinsed using a commercial tank cleaner.

After using Willowood Glufosinate 280SL (OT), triple rinse the spray equipment and clean with a commercial tank cleaner before using for crops not labeled as LibertyLink or glufosinate tolerant. Make sure any rinsate or foam is thoroughly removed from spray tank and boom. Rinsate may be disposed following the pesticide disposal directions on this label.
SPRAY DRIFT MANAGEMENT
Spray drift may result in injury to non-target crops or vegetation. To avoid spray drift, do not apply when wind speed is greater than 10 MPH or during periods of temperature inversions. Do not apply when weather conditions, wind speed, or wind direction may cause spray drift to non-target areas. AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR.
- All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers.
- For all non-aerial applications, wind speed must be measured adjacent to the application site, on upwind side, immediately prior to application.

Sensitive Areas
The pesticide may only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitats for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

Do not apply under circumstances where possible drift to unprotected persons or to food, forage, or other plantings that might be damaged or crops thereof rendered unfit for sale, use, or consumption can occur.

Aerial Drift Management
The following drift management requirements must be followed to avoid off target drift movement from aerial applications to agricultural field crops:
1. The distance of the outer most nozzles on the boom must not exceed $\frac{3}{4}$ the length of the wingspan or rotor.
2. Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45 degrees.

Where states have more stringent regulations, they need to be observed. The applicator needs to be familiar with and take into account the information covered in the Aerial Drift Reduction.
AERIAL DRIFT REDUCTION

Information on Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity, and Temperature Inversions below). AVOIDING SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR.

Controlling Droplet Size

- **Volume** – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- **Pressure** – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- **Number of nozzles** – Use the minimum number of nozzles that provide uniform coverage.
- **Nozzle Orientation** – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type** – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.
- **Boom length** – For some use patterns, reducing the effective boom length to ¾ of the wingspan or rotor length may further reduce drift without reducing swath width.
- **Application Height** – Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downward. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

Wind

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Applications need to be avoided below 2 miles per hour due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator needs to be familiar with local wind patterns and how they affect spray drift.

Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry. Avoid spraying during conditions of low humidity and/or high temperatures.
**Temperature Inversions**
Do not make aerial or ground applications into areas of temperature inversions. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog, however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

**APPLICATION DIRECTIONS FOR BURNDOWN USE**
Willowood Glufosinate 280SL (OT) may be applied as a burndown treatment prior to planting or prior to emergence of any conventional or transgenic variety of canola, corn, cotton, rice*, soybean, or sugar beet. Apply a minimum of 29 fl. oz./A of Willowood Glufosinate 280SL (OT) for burndown of existing weeds just prior to planting or prior to emergence of canola, corn, cotton, rice*, soybean, or sugar beets. For best results, apply to emerged, young, actively growing weeds. Warm temperatures, high humidity, and bright sunlight improve the performance of Willowood Glufosinate 280SL (OT). Weed control may be reduced when applications are made to weeds under stress due to drought or cool temperatures.

*Not for use in California.

- In cotton, if environmental conditions prevent timely applications, a single application may be made of up to 43 fl. oz./A of Willowood Glufosinate 280SL (OT).
  **Restriction:** If more than 29 fl. oz./A are used in any single application, the yearly total may not exceed 72 fl. oz./A, including all application timings.

- In soybean, if environmental conditions prevent timely applications, a single application may be made of up to 36 fl. oz./A of Willowood Glufosinate 280SL (OT). If 29-36 fl. oz./A are used in a single burn-down application, one additional in season application may be made at up to 29 fl. oz./A.
  **Restriction:** The yearly total may not exceed 65 fl. oz./A, including all application timings.

- In canola, corn, rice*, and sugar beets, if environmental conditions prevent timely applications, a single application may be made of up to 36 fl. oz./A of Willowood Glufosinate 280SL (OT).
  **Restriction:** No additional applications of Willowood Glufosinate 280SL (OT) may be made post-emergence to the crop during the growing season.

  **Restriction:** In rice*, following a burndown application, there must be a minimum 7 day holding period after flooding of the field.

*Not for use in California.
APPLICATION DIRECTIONS FOR USE ON CANOLA

Apply Willowood Glufosinate 280SL (OT) only to canola labeled as LibertyLink or glufosinate tolerant. Uniform, thorough spray coverage is necessary to achieve consistent weed control.

APPLICATION RATE AND TIMING

For best results, apply to emerged, young actively growing weeds. Warm temperatures, high humidity, and bright sunlight improve the performance of Willowood Glufosinate 280SL (OT). Weed control may be reduced when applications are made to weeds under stress due to drought or cool temperatures. For optimal yield, early season weed removal is important.

Applications of Willowood Glufosinate 280SL (OT) on canola may be made from the cotyledon stage up to the early bolting stage of the canola. Slight discoloration of the canola may be visible after application. This effect is temporary and will not influence crop growth maturity or yield.

Apply Willowood Glufosinate 280SL (OT) at 22 fl. oz./A per application. A second application of Willowood Glufosinate 280SL (OT) may be needed to control weeds that have not yet emerged at the time of application.

RESTRICTIONS TO THE DIRECTIONS FOR USE ON CANOLA

- **DO NOT** use on canola in the states of Alabama, Delaware, Georgia, Kentucky, Maryland, New Jersey, North Carolina, South Carolina, Tennessee, Virginia and West Virginia.
- **DO NOT** apply more than two applications of Willowood Glufosinate 280SL (OT) per year. Sequential applications need to be at least 10 days apart.
- **DO NOT** apply Willowood Glufosinate 280SL (OT) within 65 days of harvesting canola.
- **DO NOT** apply more than 44 fl. oz./A of Willowood Glufosinate 280SL (OT) per acre per year.
- If Willowood Glufosinate 280SL (OT) was used in a burndown application, no post emergence applications may be applied to the crop.
- **DO NOT** graze the treated crop or cut for hay.
- **DO NOT** apply Willowood Glufosinate 280SL (OT) if canola shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.).
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the “Rotational Crop Restrictions” section under the “Information” heading of this label for the appropriate rotational crop plant back intervals.
SPRAY ADDITIVES
Willowood Glufosinate 280SL (OT) must be applied with ammonium sulfate (AMS). Use only fine feed grade or spray grade AMS at 3 pounds per acre. Anti-foams or drift control agents may be added if needed. Use of additional surfactants or crop oils may increase risk of crop response.

CANOLA TANK MIX INSTRUCTIONS
Willowood Glufosinate 280SL (OT) at 22 fl. oz./A plus AMS may be used in tank mix combination with certain herbicides for improved control of larger than labeled grasses. Willowood Glufosinate 280SL (OT) may be applied in tank mix combinations with labeled rates of other products provided these other products are labeled for the timing and method of application for the canola to be treated. The tank mix partner must be used in accordance with the label limitations and precautions. No label dosage rates may be exceeded. Willowood Glufosinate 280SL (OT) cannot be mixed with any product containing a label prohibition against such mixing. The AMS rate may be reduced to 1.5 lbs./A when Willowood Glufosinate 280SL (OT) is tank mixed with a reduced rate of one of the grass herbicides specified below.

APPLICATION RATE AND TIMING FOR CANOLA FOR TRANSGENIC SEED PROPAGATION
(Not for use in California)
Up to three applications of Willowood Glufosinate 280SL (OT) at up to 22 fl. oz./A per application may be made to canola for transgenic seed propagation. Applications may be made from the cotyledon stage up to the early bolting stage (e.g., BBCH 18-30, between just prior to stem elongation/bolting, eight or more leaves and beginning of stem elongation, no internodes).

RESTRICTIONS TO THE DIRECTIONS FOR CANOLA FOR TRANSGENIC SEED PROPAGATION
- DO NOT apply more than three applications of Willowood Glufosinate 280SL (OT) at up to 22 fl. oz./A per application per acre per year.
- DO NOT apply more than 66 fl. oz./A of Willowood Glufosinate 280SL (OT) per acre per year.
- DO NOT apply Willowood Glufosinate 280SL (OT) beyond the early bolting stage or within 65 days of harvesting canola seed.
- DO NOT use treated canola seed for food, feed or oil purposes.
- DO NOT apply Willowood Glufosinate 280SL (OT) if canola shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.).
- DO NOT apply this product through any type of irrigation system.
APPLICATION DIRECTIONS FOR USE ON SWEET CORN
(Not for use in California)

Apply Willowood Glufosinate 280SL (OT) only to LibertyLink or other Glufosinate Tolerant corn.

APPLICATION TIMING FOR SWEET CORN
Applications for Willowood Glufosinate 280SL (OT) on sweet corn may be made from emergence until sweet corn is 24” tall or in the V-7 stage of growth (i.e., 7 developed collars), whichever comes first. Apply at a rate of 20 fl. oz./A. Willowood Glufosinate 280SL (OT) must be applied with ammonium sulfate (AMS) for use on sweet corn. Two applications of Willowood Glufosinate 280SL (OT) can be made to sweet corn in a year.

RESTRICTIONS TO THE DIRECTIONS FOR USE ON SWEET CORN

- **DO NOT** apply Willowood Glufosinate 280SL (OT) within 50 days of harvesting sweet corn ears and within 55 days of harvesting stover.
- **DO NOT** apply more than 40 fl. oz./A of Willowood Glufosinate 280SL (OT) on sweet corn per acre per year.
- **DO NOT** apply more than two applications of Willowood Glufosinate 280SL (OT) to the sweet corn crop. Sequential applications need to be at least 10 days apart.
- **DO NOT** apply Willowood Glufosinate 280SL (OT) if corn shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.)
- **DO NOT** apply this product through any type of irrigation system.

Refer to the “Rotational Crop Restrictions” section under the “Information” heading of this label for the appropriate rotational crop plant back intervals.

See “Application Directions for Use on Field Corn and Silage Corn” for Application Methods, Mixing Instructions, and Weed Control Tables.

Tank Mix Instructions for use on Sweet Corn
Willowood Glufosinate 280SL (OT) may be tank mixed with Laudis® Herbicide, Callisto®, Atrazine, or Permit®. When using Willowood Glufosinate 280SL (OT) in tank mix combinations, carefully follow the “Directions for Use” labeling of the selected partner.
APPLICATION DIRECTIONS FOR USE ON FIELD CORN AND SILAGE CORN

Apply Willowood Glufosinate 280SL (OT) only to corn labeled as LibertyLink or glufosinate tolerant. Uniform thorough spray coverage is necessary to achieve consistent weed control.

APPLICATION RATE AND TIMING
For best results, apply to emerged, young, actively growing weeds. Warm temperatures, high humidity, and bright sunlight improve the performance of Willowood Glufosinate 280SL (OT). Weed control may be reduced when applications are made to weeds under stress due to drought or cool temperatures. For optimal yield, early season weed removal is important.

Applications of Willowood Glufosinate 280SL (OT) on corn may be made with over the top broadcast or drop nozzles from emergence until corn is 24 inches tall or in the V-7 stage of growth (i.e., 7 developed collars), whichever comes first. For corn 24 inches to 36 inches tall only apply Willowood Glufosinate 280SL (OT) using ground application and drop nozzles and avoid spraying into the whorl or leaf axils of the corn stalks. Applications of Willowood Glufosinate 280SL (OT) following the use of soil applied insecticides will not injure corn.

Apply Willowood Glufosinate 280SL (OT) at 22 fl. oz./A per application. A second application of Willowood Glufosinate 280SL (OT) or a tank mix application with a residual herbicide will be needed to control weeds that have not yet emerged at the time of application.

RESTRICTIONS TO THE DIRECTIONS FOR USE ON FIELD CORN AND SILAGE CORN

- **DO NOT** apply Willowood Glufosinate 280SL (OT) within 60 days of harvesting corn forage and within 70 days of harvesting corn grain and corn fodder.
- **DO NOT** apply more than two applications of Willowood Glufosinate 280SL (OT) to the corn crop per year. Sequential applications need to be at least 10 days apart.
- **DO NOT** apply more than 44 fl. oz./A of Willowood Glufosinate 280SL (OT) on corn per acre per year.
- If Willowood Glufosinate 280SL (OT) was used in a burndown application, no post-emergence applications may be applied to the crop.
- **DO NOT** use nitrogen solutions as spray carriers. A silicone-based antifoam agent may be added if needed.
- **DO NOT** apply Willowood Glufosinate 280SL (OT) if corn shows injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.)
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the “**Rotational Crop Restrictions**” section under the “**Information**” heading of this label for the appropriate rotational crop plant back intervals.

SPRAY ADDITIVES
For corn and sweet corn, Willowood Glufosinate 280SL (OT) must be applied with ammonium sulfate (AMS). It is recommended to use only fine feed grade or spray grade AMS at 3 lbs. per acre (17 lbs./100 gallons). When temperatures exceed 85° F, the rate of AMS can be reduced to 1.5 lbs. per acre (8.5 lbs./100 gallons) to reduce potential leaf burn.

Use of additional surfactants or crop oils may increase risk of crop response.
CORN TANK MIX INSTRUCTIONS
Certain herbicide tank mixes may aid in the performance of Willowood Glufosinate 280SL (OT). No additional surfactant is needed with any tank mix partner. Willowood Glufosinate 280SL (OT) may be applied in tank mix combinations with labeled rates of other products provided these other products are labeled for the timing and method of application for the corn to be treated. The tank mix partner must be used in accordance with the label limitations and precautions. No label dosage rates may be exceeded. Willowood Glufosinate 280SL (OT) cannot be mixed with any product containing a label prohibition against such mixing.

¹ Tank mixing with pendimethalin may result in reduced control of barnyardgrass, fall panicum, field sand-bur, yellow foxtail, and volunteer corn.

² It is recommended that these products are tank mixed at half the use rate with Willowood Glufosinate 280SL (OT) to reduce risk of crop response.

CORN INSECTICIDE TANK MIX PARTNERS FOR WILLOWOOD GLUFOSINATE 280SL (OT)
To provide weed and insect control in corn, Willowood Glufosinate 280SL (OT) may be mixed with the following insecticides:

<table>

APPLICATION DIRECTIONS FOR USE ON COTTON

Uniform thorough spray coverage is necessary to achieve consistent weed control. Willowood Glufosinate 280SL (OT) may be applied as a broadcast, over-the-top, post-emergence spray or as a directed spray only to LibertyLink or glufosinate tolerant cotton. This product may be applied post emergence to non-LibertyLink or non glufosinate tolerant cotton, varieties or cultivars by using equipment designed to minimize contact of the spray with the cotton foliage. See the Application Methods on Non-LibertyLink or Non-Glufosinate Tolerant Cotton section for selection of shielding equipment. Severe injury or death may result if the Willowood Glufosinate 280SL (OT) contacts the foliage or stems of cotton NOT labeled as LibertyLink or glufosinate tolerant.

APPLICATION RATE AND TIMING

For best results, apply to emerged, young, actively growing weeds. Warm temperatures, high humidity, and bright sunlight improve the performance of Willowood Glufosinate 280SL (OT). Weed control may be reduced when applications are made to weeds under stress due to drought or cool temperatures. For optimum yield, early season weed removal is important.

Apply Willowood Glufosinate 280SL (OT) to cotton from emergence up to the early bloom stage at 22 to 29 fl. oz./A. Should environmental conditions prevent a timely herbicide application, a single application of up to 43 fl. oz./A of Willowood Glufosinate 280SL (OT) may be made to cotton. If more than 29 fl. oz./A are used in any single application, the yearly total may not exceed 72 fl. oz./A, including all application timings. See Restrictions to the Directions for use on Cotton below for additional information.

Refer to the Weed Control Table for Row Crops section of this label for selection of the proper rate dependent upon weed species present and size. In weed populations with mixed species, select the highest rate required to control all the species. Volunteer LibertyLink or glufosinate tolerant crop plants (corn, rice, cotton, soybeans, sugar beets) from the previous season will not be controlled by applications of Willowood Glufosinate 280SL (OT). A repeat application of Willowood Glufosinate 280SL (OT) or tank mixes with a residual herbicide will be needed to control weeds that have not emerged at the time of application. See the Tank Mix Instructions for Use on Cotton to select suitable tank mix partners.

RESTRICTIONS TO THE DIRECTIONS FOR USE ON COTTON

- **DO NOT** apply Willowood Glufosinate 280SL (OT) to cotton in Florida - South of Tampa (Florida Route 60), or in Hawaii (except for test plots or breeding nurseries).
- **DO NOT** apply Willowood Glufosinate 280SL (OT) within 70 days prior to cotton harvest.
- Up to three applications of Willowood Glufosinate 280SL (OT) may be made to cotton per year at a maximum application rate of 29 fl. oz./A. **DO NOT** apply more than 87 fl. oz. (including all application timings) to cotton per acre per year under this application scenario. Sequential applications need to be at least 10 days apart.
- If environmental conditions prevent timely applications resulting in large weeds or heavy infestations, a single application of Willowood Glufosinate 280SL (OT) at up to 43 fl. oz./A may be made to cotton. **DO NOT** apply more than 43 fl. oz. of Willowood Glufosinate 280SL (OT) in a single application under this use scenario. If a single application greater than 29 fl. oz. is made, a subsequent application not to exceed 29 fl. oz. may be made to cotton. The yearly total use rate under this scenario may not exceed 72 fl. oz. of Willowood Glufosinate 280SL (OT). Sequential applications need to be made at least 10 days apart.
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the “Rotational Crop Restrictions” section under the “Information” heading of this label for the appropriate rotational crop plant back intervals.

APPLICATION METHODS TO COTTON LABELED AS LIBERTYLINK OR GLUFOSINATE TOLERANT

Refer to the Weed Control Table for Row Crops to select the proper application rate based upon the weeds present and their size. Uniform and thorough spray coverage is required to achieve consistent weed control. For ground application, apply Willowood Glufosinate 280SL (OT) to LibertyLink or glufosinate tolerant cotton as an over-the-top foliar spray directed to the lower one-third of the cotton stand.

APPLICATION METHODS TO NON-LIBERTYLINK OR NON-GLUFOSINATE TOLERANT COTTON

Application of Willowood Glufosinate 280SL (OT) to cotton varieties not labeled as LibertyLink or glufosinate tolerant requires the use of hooded spray equipment designed to minimize exposure of the spray to the cotton stand. A hooded sprayer directs the spray onto weeds, while shielding the cotton stand from contact. Use nozzles that provide uniform coverage within the treated area. Keep hoods on these sprayers adjusted to protect desirable vegetation. Extreme care must be exercised to avoid exposure of the desirable vegetation to the spray.

With a hooded sprayer, the spray pattern is completely enclosed on the top and all 4 sides by a hood, thereby shielding the crop from the spray solution. This equipment must be set up and operated in a manner that avoids bouncing or raising the hoods off the ground in any way. The spray hoods must be operated on the ground or skimming across the ground. Tractor speed must be adjusted to avoid bouncing of the spray hoods. Avoid operation on rough or sloping ground where the spray hoods might be raised off the ground. If the hoods are raised, spray particles may escape and come into contact with the cotton, causing damage or destruction of the crop.

Herbicide rates and spray volume instructions are presented as broadcast equivalents and must be reduced in proportion to the area actually treated. Use the following formulas to calculate the correct rate and volume per planted (field) acre.
### Band width in inches
\[
\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{Broadcast RATE per acre} = \text{Amount of banded product needed per acre}
\]

### Band width in inches
\[
\frac{\text{Band width in inches}}{\text{Row width in inches}} \times \text{Broadcast spray VOLUME per acre} = \text{Banded spray volume needed per acre}
\]

### POST HARVEST
Willowood Glufosinate 280SL (OT) may be applied as a post-harvest burndown treatment to fields (after cotton harvest). Up to 43 fl. oz./A of Willowood Glufosinate 280SL (OT) may be applied in a single application to control larger weeds growing in the crop at the time of harvest.

If more than 29 fl. oz./A is used in a single application, the yearly total may not exceed 72 fl. oz./A, including all application timings. Refer to the “Rotational Crop Restrictions” section of this label for appropriate rotational crop information.

### COTTON TANK MIX INSTRUCTIONS
Certain tank mixes may aid in the performance of Willowood Glufosinate 280SL (OT). No additional surfactant is needed with any tank mix partner. Willowood Glufosinate 280SL (OT) may be applied in tank mix combination with labeled rates of other products provided these other products are labeled for the timing and method of application for the cotton to be treated. The tank mix partner must be used in accordance with the label limitations and precautions. No label dosage rates may be exceeded. Willowood Glufosinate 280SL (OT) cannot be mixed with any product containing a label prohibition against such mixing.

**LibertyLink or Glufosinate Tolerant Cotton** - For cotton tolerant to Willowood Glufosinate 280SL (OT), Dual Magnum® or Staple® Herbicide may be tank mixed with Willowood Glufosinate 280SL (OT) and applied over the top post-emergence to enhance weed control and/or provide residual control.

**All Cotton Types** – The following herbicides may be tank mixed with Willowood Glufosinate 280SL (OT) for hooded spray application to enhance weed control and/or provide residual weed control.

APPLICATION DIRECTIONS FOR USE ON SOYBEANS

Apply Willowood Glufosinate 280SL (OT) only to soybean designated as LibertyLink or glufosinate tolerant. Uniform, thorough spray coverage is necessary to achieve consistent weed control.

APPLICATION RATE AND TIMING

For best results apply to emerged, young, actively growing weeds. Warm temperatures, high humidity, and bright sunlight improve the performance of Willowood Glufosinate 280SL (OT). Weed control may be reduced when applications are made to weeds under stress due to drought or cool temperatures. Adding ammonium sulfate with Willowood Glufosinate 280SL (OT) may improve weed control if weeds are under stress. For optimal yield, early season weed removal is important.

Applications of Willowood Glufosinate 280SL (OT) on soybeans may be made from emergence up to but not including the bloom growth stage.

Apply Willowood Glufosinate 280SL (OT) to LibertyLink or glufosinate tolerant soybeans from emergence up to but not including the bloom growth stage at 22 to 29 fl. oz./A. See weed chart to determine rate. Should environmental conditions prevent a timely herbicide application, a single application of up to 36 fl. oz./A of Willowood Glufosinate 280SL (OT) may be made to soybeans followed by one additional application at maximum of 29 fl. oz./A with a yearly maximum of 65 fl. oz./A. Willowood Glufosinate 280SL (OT) may be applied alone or in a tank mix application with a residual herbicide to control weeds that have not yet emerged at the time of application.

Although timely post applications of Willowood Glufosinate 280SL (OT) can provide complete weed control, residual herbicides at burndown planting, or tank mixed with Willowood Glufosinate 280SL (OT) help ensure optimal weed management, particularly if environmental conditions delay timely post applications. Residual herbicides can also reduce early season weed competition and are a key element of good weed resistance management practices.

RESTRICTIONS TO THE DIRECTIONS FOR USE ON SOYBEANS

- **DO NOT** apply Willowood Glufosinate 280SL (OT) within 70 days of harvesting soybean seed.
- **DO NOT** apply more than 65 fl. oz./A of Willowood Glufosinate 280SL (OT) on soybeans per acre per year.
- **DO NOT** apply more than 36 fl. oz./A of Willowood Glufosinate 280SL (OT) in a single application.
- **DO NOT** graze the treated crop or cut for hay.
- **DO NOT** use nitrogen solutions as spray carriers. A silicone-based antifoam agent may be added if needed.
- **DO NOT** apply Willowood Glufosinate 280SL (OT) if soybeans show injury from prior herbicide applications or environmental stress (drought, excessive rainfall, etc.)
- **DO NOT** apply this product through any type of irrigation system.
- Refer to the “Rotational Crop Restrictions” section under the “Information” heading of this label for the appropriate rotational crop plant back intervals.
- Sequential applications need to be at least 5 days apart.

SOYBEAN TANK MIX INSTRUCTIONS

Certain herbicide tank mixes may complement Willowood Glufosinate 280SL (OT). No additional surfactant is needed with any tank mix partner. Willowood Glufosinate 280SL (OT) may be applied in tank mix combinations with labeled rates of other products provided these other products are labeled for the timing and method of application for the soybean to be treated. The tank mix partner must be used in accordance with the label limitations and precautions. No label dosage rates may be exceeded. Willowood Glufosinate 280SL (OT) cannot be mixed with any product containing a label prohibition against such mixing.

APPLICATION DIRECTIONS FOR CANOLA, CORN, COTTON, AND SOYBEAN SEED PROPAGATION

Willowood Glufosinate 280SL (OT) may be applied to select out susceptible “segregates” (i.e., canola, corn, cotton, and soybean plants that are not tolerant to glufosinate-ammonium during seed propagation).

- **Canola:** Willowood Glufosinate 280SL (OT) may also be used in canola seed propagation as a foliar spray to selectively eliminate canola plants that do not carry a gene that imparts tolerance to glufosinate-ammonium and as such, can be applied to remove susceptible segregates during canola seed propagation. Breeding material not possessing the glufosinate-ammonium tolerance gene will be severely injured or killed if treated with this herbicide. See Application Use Directions for Use on Canola for use rates and application timing.

- **Corn:** Inbred lines (plants not possessing glufosinate-ammonium tolerance) will be severely injured or killed if treated with this herbicide. A hooded sprayer may be used to protect plants from coming into contact with the herbicide application. For the selection of tolerant corn segregates, Willowood Glufosinate 280SL (OT) may be applied at 22 fl. oz./A plus AMS at 3 lbs./A (17 lbs./100 gallons) when corn is in the V-3 to V-4 stage of growth (i.e., 3 to 4 developed collars). A second treatment of 22 fl. oz./A plus AMS at 3 lbs./A may be applied when the corn is in the V-6 to V-7 stage of growth or up to 24” tall. Sequential applications need to be at least 10 days apart. When temperatures exceed 85° F, the rate of AMS can be reduced to 1.5 lbs./A (8.5 lbs./100 gallons) to reduce potential leaf burn.

- **Cotton:** Willowood Glufosinate 280SL (OT) may also be used in cotton seed propagation as a foliar spray to selectively eliminate cotton plants that do not carry a gene that imparts tolerance to glufosinate-ammonium and as such, can be applied to remove susceptible segregates during cotton seed propagation. Breeding material not possessing the glufosinate-ammonium tolerance gene will be severely injured or killed if treated with this herbicide. See Application Use Directions for Use on Cotton for use rates and application timing.

- **Soybean:** For the selection of tolerant soybean (segregates), Willowood Glufosinate 280SL (OT) may be applied at up to 22 to 36 fl. oz./A when soybean is in the third trifoliate stage. A second treatment of 22 to 29 fl. oz./A may be applied up to but not including the bloom growth stage of soybean. Sequential applications need to be at least 5 days apart.
APPLICATION DIRECTIONS FOR POTATO VINE DESSICATION

APPLICATION RATE AND TIMING
Apply Willowood Glufosinate 280SL (OT) at the beginning of natural senescence of potato vines. Apply 21 fl. oz./A. Potato varieties with heavy or dense vines may require an application of another desiccation product to complete vine desiccation.

Thorough coverage of the potato vines to be desiccated is essential. Use a sufficient volume of water (20 to 100 gpa) to obtain a thorough coverage of the potato vines. Vary the gallons of water per acre and the spray pressure as indicated by the density of the potato vines to assure thorough spray coverage. Increase the spray volume to at least 30 gallons of water per acre when the potato vine canopy is dense or under cool and dry conditions. Apply Willowood Glufosinate 280SL (OT) with the spray boom as low as possible to achieve thorough coverage of the potato vines for best control and to minimize drift potential.

RESTRICTIONS TO THE DIRECTIONS FOR USE IN POTATO VINE DESICCATION
1. **DO NOT** apply more than 21 fl. oz./A to potato vines per acre per year. **DO NOT** split this application or apply more than one application per harvest.
2. **DO NOT** harvest potatoes until 9 days or more after application of Willowood Glufosinate 280SL (OT).
3. **DO NOT** apply to potatoes grown for seed.
4. Canola, corn, cotton, rice, soybean, and sugar beets may be planted at any time after the application of Willowood Glufosinate 280SL (OT) as a potato vine desiccant.
5. **DO NOT** plant treated areas to wheat, barley, buckwheat, millet, oats, rye, sorghum, and triticale until 30 or more days after an application of Willowood Glufosinate 280SL (OT) as a potato vine desiccant.
6. **DO NOT** plant treated areas to crops other than those listed in this use precautions section until 120 or more days after an application of Willowood Glufosinate 280SL (OT) as a potato vine desiccant.

FALLOW FIELDS OR POST HARVEST
Willowood Glufosinate 280SL (OT) may be used as a substitute for tillage in fallow fields to control or suppress weeds listed in the Weed Control for Row Crops section of this label. Applications may be made in fallow fields, post-harvest, prior to planting or emergence of any crop listed on this label.

Apply Willowood Glufosinate 280SL (OT) at 22 or 29 fl. oz./A to fallow fields to control specific weeds. Willowood Glufosinate 280SL (OT) must be applied with ammonium sulfate. Tank mixes with 2,4-D, glyphosate or atrazine are recommended with Willowood Glufosinate 280SL (OT) to enhance total weed control. When using Willowood Glufosinate 280SL (OT) in tank mix combinations, follow the precautions and directions for use of the most restrictive label. See the Application and Mixing Procedures section of this label for additional information on how to apply this product. See the Information section of this label for rotational crop restrictions.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Do not use or store near heat or open flame. Keep the container tightly closed and dry in a cool, well ventilated place. Storage temperature should not exceed 125°F. Protect against direct sunlight.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER HANDLING:

Nonrefillable Container (five gallons or less): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill or by incineration.

Nonrefillable Container (greater than five gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then offer for recycling if available or reconditioning if appropriate or puncture and dispose of in a sanitary landfill or by incineration.

SEED DISPOSAL: To dispose of out of date or otherwise unmarketable seed from plants which have been treated with this product, broadcast and lightly incorporate seed into field soils using disc or other suitable implement. Any resulting crop may be destroyed by chemical or mechanical means. Alternatively, seed may be destroyed by deep burial, incineration or landfill disposal.
CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather, presence of other materials or other influencing factors in the use of the product, which are beyond the control of Willowood, LLC or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold Willowood, LLC and Seller harmless for any claims relating to such factors.

Willowood, LLC warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or Willowood, LLC, and Buyer and User assume the risk of any such use. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, WILLOWOOD, LLC MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

To the extent consistent with applicable law, neither Willowood, LLC nor Seller shall be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF WILLOWOOD, LLC AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF WILLOWOOD, LLC OR SELLER, THE REPLACEMENT OF THE PRODUCT.

Willowood, LLC and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of Willowood, LLC.
