SWIMMING POOL WATER DISINFECTION: NEW POOL OR SPRING START-UP:

To yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Adjust and maintain the pool water pH to between 7.2 and 7.6. Add the pool water pH to achieve the alkalinity of the pool to achieve 50 to 100 ppm of available chlorine in the water. Add 50 to 100 ppm of available chlorine by weight. Check the level of available chlorine with a test kit. Do not enter the pool until the chlorine residual is between 1.0 to 1.5 ppm. Adjust and maintain the pool water pH to achieve between 50 and 100 ppm of available chlorine in the water. Do not enter the pool until the chlorine residual is between 1.0 to 1.5 ppm. Do not chlorinate the pool within 24 hours prior to discharge. WINTERIZING POOLS:

While water is still clear and while filter system is in service, clean 3 oz. per 1,000 gallons of water, to obtain a ppm chlorine residual, as determined by a suitable test kit. Cover pool, prepare heater, filter, and heater components for winter by following manufacturer’s instructions.

SANITIZATION OF NONPOROUS FOOD CONTACT SURFACES: IMMERSION METHOD: A solution of 100 ppm available chlorine may be used in the sanitizing solution if a chlorine test kit is available. Solutions containing an initial concentration of 100 ppm available chlorine must be tested and adjusted periodically to ensure that the available chlorine does not fall below 50 ppm. Prepare a 100 ppm sanitizing solution by thoroughly mixing 1 oz. of this product with 10 gallons of water. Do not rinse equipment with water after treatment. Sanitizers used in automated systems may be used for general cleaning but may not be reused for sanitizing purposes. RINSE METHOD: A solution of 100 ppm available chlorine may be used in the sanitizing solution if a chlorine test kit is available. Sanitizers containing an initial concentration of 100 ppm available chlorine must be tested and adjusted periodically to ensure that the available chlorine does not fall below 50 ppm. Prepare a 100 ppm sanitizing solution by thoroughly mixing 1 oz. of this product with 10 gallons of water. Do not rinse equipment with water after treatment. Sanitizers used in automated systems may be used for general cleaning but may not be reused for sanitizing purposes. FLOW/PRESSURE METHOD: Classically equipped and thoroughly clean after use. Assemble equipment in operating position prior to use. Prepare a volume of 200 ppm available chlorine sanitizing solution equal to 110% of volume capacity of the equipment by mixing the product in a ratio of 2 oz. product with 10 gallons of water. Do not rinse equipment with water after treatment. Clean equipment in an immersion tank, thoroughly clean equipment in an immersion tank, thoroughly clean all internal surfaces. Disassemble equipment and thoroughly clean after use. Assemble equipment in an immersion tank, thoroughly clean equipment in an immersion tank, thoroughly clean all internal surfaces. Do not rinse equipment with water after treatment. Clean equipment in an immersion tank, thoroughly clean equipment in an immersion tank, thoroughly clean all internal surfaces. Disassemble equipment and thoroughly clean after use. Assemble equipment in an immersion tank, thoroughly clean equipment in an immersion tank, thoroughly clean all internal surfaces. Do not rinse equipment with water after treatment.
