**PRECAUTIONARY STATEMENTS**

**Physical and Chemical Hazards**

Do not apply this product around electrical equipment due to the possibility of shock hazard.

- If this product is swallowed, do not induce vomiting. Call a poison control center or doctor immediately.
- If this product is in the eyes, flush them with water for 15 minutes. If irritation or discomfort continues, see a doctor.
- If this product is on the skin, wash with soap and water. If irritation or discomfort continues, see a doctor.

**DIRECTIONS FOR USE**

- **To Kill Bed Bugs:** Spray bed bugs or eggs directly, and/or apply as a surface spray to indoor surfaces, fabrics and materials on which bed bugs may harbor, hide or lay eggs (e.g. mattresses, box springs, under beds, bed frames, headboards, linens, and behind nightstands, curtains, suitcases, carpets, dressers, points where carpets and wall meet, moldings). Pay particular attention to tufts, folds, edges, cracks and crevices. For ongoing control of bed bugs and eggs, re-apply every 1 to 2 weeks or as needed.

- **To Kill Dust Mites:** Spray dust mites. The product is effective against pesticide-resistant dust mites and will keep killing mites for up to 100% of dust mites when sprayed directly.

**How to Apply**

Shake well prior to use. Spray pests directly, or treat surfaces and fabrics until moist. Use approximately one ounce per 1.5 to 6 sq. ft. of surface area depending on material treated. For optimal performance, close doors and windows and turn off air circulation (e.g. heaters and air conditioners). Leave treated areas undisturbed for at least 4 hours after treatment. After 4 hours, ventilate the treated area well and allow reentry.

**NOTICE:**

Research and testing have determined that the "Directions for Use" are appropriate for the proper use of this product under expected conditions. To the extent consistent with applicable law, user assumes responsibility for the lack of performance or safety if not used as directed.
