HychloHD 

A non-iodinated, water-based, non-flammable sanitizer and disinfectant for use on hard, non-porous horizontal surfaces. It is a stabilized concentrated product that is intended for use in health care facilities, classrooms, institutions, commercial facilities including restrooms and breakrooms. When used according to the directions on the label, this product sanitizes and disinfects hard non-porous surfaces including: sealed concrete, stone walls, glass, glazed porcelain, fiberglass, laminated surfaces, non-porous plastics, plastic laminate, stainless steel, synthetic marble, vinyl. Not recommended for use on: aluminum, brass, copper, carpet, fabrics, felt, natural marble, natural stone, painted surfaces, painted wood, plastic laminate, stainless steel, synthetic marble, vinyl. This product is not intended for indoor residential consumer use.

DIRECTIONS FOR USE

It is advisable of health care to use this product as a cleaner disinfectant with its labeling.

Disinfectant Concentration: Prior to use, HychloHD™ needs to be diluted. For Hospital/Healthcare facilities the final recommended use concentration of the 150 ppm.

1. Dilute by adding 1 gallon of concentrate, add 1 gallon of clean water.
2. Use and it is ready to use.

Microbiological Activity

When used as directed, HychloHD™ is effective at killing 99.9% of the following genera/bacteria:

- C. difficile
- E. coli
- A. baumannii
- P. aeruginosa
- K. pneumoniae
- S. aureus
- Staphylococcus aureus
- Staphylococcus epidermidis
- MRSA
- VRE
- Oxytetracycline-resistant enterococci (VRE)
- MRSA
- VRE
- Oxytetracycline-resistant enterococci (VRE)

Disinfectant Applications

Hard, non-porous horizontal Surfaces: To disinfect and disinfest, first clean the product area with a mild detergent, rinse with water and allow to air dry. Then apply HychloHD™ to the non-porous surface wall and surface to be disinfected. Allow the solution to remain on the surface for 15 minutes. Use one spray application per 15 square feet of surface area.

Sanitizing Applications

Hard, non-porous horizontal Surfaces: To sanitize the product area, first clean the product area with a mild detergent, rinse with water and allow to air dry. Then apply HychloHD™ to the non-porous surface wall and surface to be disinfected. Allow the solution to remain on the surface for 10 minutes. Use one spray application per 15 square feet of surface area.

Sanitizing Applications

Soft Surfaces: To sanitize the product area, first clean the product area with a mild detergent, rinse with water and allow to air dry. Then apply HychloHD™ to the non-porous surface wall and surface to be disinfected. Allow the solution to remain on the surface for 10 minutes. Use one spray application per 15 square feet of surface area.

Storage

Keep out of reach of children.
Caution: Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Physical or Chemical Hazards: Prolonged contact with metal may cause corrosion or pitting of metal. Avoid contact with metal that may cause etching or pitting of metal.

Precautionary Statements

Caution: Causes skin irritation. Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

Physical or Chemical Hazards: Prolonged contact with metal may cause corrosion or pitting of metal. Avoid contact with metal that may cause etching or pitting of metal.

First Aid: In case of contact or injury, immediately treat by applying anhydrous water. Do not apply water to the wound. If irritaion persists after washing, consult a physician.

Inhalation: If material is inhaled, remove patient to fresh air. If not, proceed as follows: If necessary, consult a physician.

Ingestion: If material is ingested, induce vomiting only if patient is unresponsive. Do not attempt to induce vomiting if patient is responsive. Do not attempt to induce vomiting if patient is unresponsive. Do not attempt to induce vomiting if patient is unresponsive. Do not attempt to induce vomiting if patient is unresponsive. Do not attempt to induce vomiting if patient is unresponsive. Do not attempt to induce vomiting if patient is unresponsive.
