OPENING YOUR POOL:
For best results, see the "WATER BALANCE" section above before treatment. Adjust and maintain pH in the 7.2 to 7.6 range. Follow "SHOCK TREATMENT" directions on this label. Add 1 oz of this product per 10,000 gallons of pool water daily, or as often as needed to maintain the free available chlorine residual at 1-4 ppm. Follow "HOW TO USE" directions on this package.

ROUTINE CHLORINATION:
For best results, see "WATER BALANCE" section above before treatment. Throughout the pool season, adjust and maintain pH at 7.2–7.6. Check available chlorine with a suitable test kit. Add 4 oz of this product per 10,000 gallons of pool water daily, or as often as needed to maintain the free available chlorine residual at 1-4 ppm. Follow "HOW TO USE" directions on this package.

For pools stabilized using a stabilizer and conditioner:
Add 3 oz per 10,000 gallons every other day or as often as needed to maintain the free available chlorine residual at 1-4 ppm. Follow "HOW TO USE" directions on this package.

FOR UNSTABILIZED POOLS:
Add 1 oz of this product per 10,000 gallons of pool water daily to provide 5-10 ppm available chlorine. Additional shock treatment is required to control problems which are caused by visible algae, high bather loads, happy wind and rainstorms. Additional shock treatment is required to control problems such as unpleasant odors and eye irritation. Check the available chlorine with a suitable test kit. Add 1 oz of this product per 10,000 gallons of pool water daily, or as often as needed to maintain the free available chlorine residual at 1-4 ppm. Follow "HOW TO USE" directions on this package.

ALGAE CONTROL:
Follow "SHOCK TREATMENT" directions on this label. Add this product as close as possible to any algae on the sides or bottom of the pool. If necessary, repeat the treatment. To prevent possible staining or blanching, take the following steps immediately after treatment. Thoroughly clean pool by brushing surfact surf of algae growth, vacuum and cycle through filter. For preventative algae control, use your preferred swim Best algaecide product regularly. Follow label directions on the algae.

HOW TO USE:
IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH ITS LABELING. Read entire label and use strictly in accordance with precautionary statements and use directions.

SWIMMING POOL WATER DISINFECTION:
This product, with a 65% available chlorine, is designed to dissolve quickly and provide a ready source of available chlorine in swimming pools. Used according to directions Cal Hypo Granules kills algae, kills bacteria and inorganic contaminants. If any chlorine residual is present, adding 3 oz per 10,000 gallons will increase the residual by approximately 1 part per million (ppm). Follow the dosages and procedures below. Always adjust pH between 7.2 and 7.6 prior to using this product. Additional shocking to keep water clean and clear is needed after rain and heavy winds, high number of swimmers, increased water temperature, and/or increased frequency of pool usage.

DIRECTIONS FOR USE:
Mix only with water. Use clean, dry utensils. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause a violent reaction-leading to fire or explosion. Contamination with organic matter or other chemicals will start a chemical reaction with generation of heat, chlorine gas and possible generation of fire and explosion. In case of contamination or decomposition, do not re-treat the container. If possible, isolate container in open air or well ventilated area. Flood with large volumes of water if necessary.

STORAGE AND DISPOSAL:
STORAGE: Keep this product dry in tightly closed container when not in use. Store in cool, dry, well ventilated area away from heat or open flame. In case of decomposition, isolate container (if possible) and flood area with large amounts of water to dissolve all materials before discarding this container.

CONTAINER HANDLING AND DISPOSAL:
Nonrefillable container. Do not reuse or refill this container. In case of decomposition, isolate container (if possible) and flood area with large volumes of water. Do not handle with bare hands. Irritating to nose and throat. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using the toilet. Remove and wash contaminated clothing before reuse. Offer for recycling if available. Container contaminated with chlorine gas is a strong oxidizing agent. Do not mix with incompatible materials such as fuel oil, gasoline, or other oxidizing materials. Do not use in commercial chlorine feeders or in any other device containing chlorine gas. Do not use this product in any chlorination device containing remnants of any other product. Such use may cause a violent reaction-leading to fire or explosion. Use this method to avoid bleaching vinyl liner or paint. Make sure the filter pump is on and properly recirculating through skimmer. Empty skimmer of all chemicals and debris. Contamination may cause an explosion or the release of toxic gases. Do not use this method when an automatic chlorine dispensing device (e.g., feeder) is present. Pour this product slowly into skimmer, making sure the material is drawn into the system. Do not use this material to supplement as toxic gases may be generated. For best product performance, swimmer comfort and crystal clear water, maintain pH in the 7.2–7.6 range. Maintain total alkalinity in the 60-120 parts per million (ppm). Maintain calcium hardness above 200 ppm. Use a reliable test kit that measures all the relevant parameters. Use Swim Best to make adjustments. Follow label directions for each product.

Note to Physician:
In case of an accident, consult a physician. Poison may cause unconsciousness or death. If swallowed, do not induce vomiting. If possible, isolate container (if possible) and flood area with large volumes of water to dissolve all materials before discarding this container. Offer for recycling if available.
