PRECAUTIONARY STATEMENTS
HUMANS TO DOMESTIC AND ANIMALS

WARNING: May be toxic if swallowed or inhaled. Do not breathe vapors, spray mist or sanding dust. Wear a NIOSH/OSHA certified mask or positive respiratory. Remove contaminated clothing and wash clothing before reuse. Causes moderate eye irritation. Harmful if absorbed through skin. Avoid contact with skin, eyes or clothing. Wear protective clothing such as gloves, long-sleeved cotton shirt, long pants and hat. Wash thoroughly with soap and water after handling. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

NOTE: When this product is used in conformed areas or while spraying paint or sanding or sandblasting onto surfaces, wear a mask or a respirator jointly approved by the Mining Safety Health Administration and the National Institute for Occupational Safety and Health.

FIRST AID

IF SWALLOWED: 
- Call a poison control center or doctor immediately for treatment advice.
- Do not give any liquid to the person.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

IF IN EYES: 
- Hold eye open and rinse slowly and gently with water for 15 – 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

IF ON SKIN OR CLOTHING: 
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 – 20 minutes.
- Call a poison control center or doctor for treatment advice.

IF INHALED: 
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
- Call a poison control center or doctor for further treatment advice.

NOTICE TO PHYSICIAN

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-548-0489 for emergency medical treatment information.

CONTAINS PETROLEUM DISILICATES - VOMITING MAY CAUSE ASPIRATION PNEUMONIA.

ENVIRONMENTAL HAZARDS

This material is toxic to fish. Do not apply directly to water by way of discharging of equipment or disposal of waste. Do not allow chips or dust generated during paint removal to enter water. Dispose of paint debris in an approved landfill. Do not discharge effluents containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of the National Pollution Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluents without preliminary treatment to local sewage treatment plant authority. Contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARDS - DO NOT USE OR STORE NEAR FIRE OR OPEN FLAMES.

Do not allow fire or heat in the vicinity of this product. Keep flame or sparks away from this product.

STORAGE: Store in a cool, dry, well-ventilated area away from heat. Keep container closed when not in use. Keep away from fire, sparks, lighted tobacco products, and open flame.

PESTICIDE DISPOSAL: Pesticide waste is toxic. Improper disposal of excess pesticide, spray residue or rinsate is a violation of Federal law. If these waste products cannot be disposed of by use according to label instructions, contact your State Pesticide Control. These waste must be disposed of by a licensed hazardous waste transporter. Call the local waste management authority to ensure proper disposal.

CONTAINER HANDLING: Nonrefillable container. Do not reuse or refill this container. Do not incinerate, vaporize, or explode. Follow all applicable regulations and industry standards. Do not mix or store with other chemicals. Keep container closed when not in use.

NOTICE TO MANUFACTURER: Contains a chemical known to the State of California to cause cancer, birth defects or other reproductive harm.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Product Description: This product is a top-of-the-line hard modified epoxy anti-fouling paint for use on boat bottoms. It is an antifouling protective coating resistant to algae, barnacles and other marine fouling. Designed to repel fouling in the most severe feeling tropical waters, it can be used equally successfully in temperate waters as well as fresh water. This product may be applied on fiberglass, wood, or properly primed steel boats. It is ideal for both power and sail boats, anywhere a durable finish and long life is desired.

Surface Preparation: The surface to be painted should be dry, clean and free of any contaminants. It should be properly prepared by sanding, cleaning and sanding before any primer or paint is applied. Follow the recommended systems below. When sanding any anti-fouling paint, always make sure to paint the area clean before the primer is applied. This will permit the primer to adhere to the surface and give an excellent adhesion. When painting a boat, always prime the entire area before the primer is applied. This will permit the primer to adhere to the surface and give an excellent adhesion.

Application and Temperature: This product may be applied by brush, roller or spray at any temperature between 40°F and 90°F. Do not apply this product in rain or drizzle or in the case of a surface that has completely dried. Two coats should be applied for best anti fouling protection.

PREPARATION OF PAINT: This product is heavily laden with copious oils. As a result of the loading there is a tendency for settling to occur. If the paint has been on a shelf for several months, it is necessary to thoroughly mix the paint before using. It is possible to mix the can of paint on a mechanical paint shaker. Before using check the sides and bottom of the can to make sure all the pigment has been mixed in. If mixing is going to be done with a wooden paddle or an electric drill mixer, pour off half of the liquid from the can into another can and then properly mix as in any transfer canister, then remix the two parts together thoroughly.

THINNER: This product is not normally required. If necessary use Pettit 1270-10 Brushing Thinner for a smoother finish on especially warm and breezy days. Use Pettit 1271-16 Brushing Thinner for spray application. Use other thiner for clamping.

Drier Times: 
- To reach:
  90°F:
  2 Hours
  70°F:
  4 Hours
  60°F:
  6 Hours
- The above dry times are minimum. This product may be recoated at minimum times shown and brushed up to 60 days after painting.

Coverage: This product will cover approximately 400 square feet per gallon when applied at 2 dry film mill thickness.

VOC Levels - This product will meet or exceed all applicable federal and state regulations.

Maintenance of Anti-fouling Paint: No anti-fouling paint can be effective under all conditions of exposure. Man-made pollution and natural occurrences can adversely affect anti-fouling paint performance. Extreme heat and cold temperatures, salt, dirt, oil, trochaner water and even electrolytes can ruin an anti-fouling paint. Therefore we strongly suggest that the bottom of the boat be checked regularly to make sure it is clean and that no growth is occurring. Lightly scrape the bottom with a soft brush to remove anything from the anti-fouling paint surface. The self-clearing nature of the coating is most effective when the boat is used periodically.

SYSTERS: Mix paint thoroughly to insure toxicants are evenly dispersed throughout the can. All surfaces must be clean, dry and properly prepared prior to painting.

Compatibility: This product may be applied over most aged hard anti-fouling coatings. Old soft anti-fouling paints must be completely removed before applying this product. Old tin/opensprays should be removed completely with Pettit 6627 Tin Coat Primer before applying this product. The paint system below must not contain any thickeners or other Pettit products. Please read and understand the label and/or technical bulletin for those products as well to ensure that they are used properly. Do not apply this product to upstream hulls and accessories.

Previously Painted Surfaces: If the previous coating is in good condition, thoroughly sand with 60-grit paper then solven clean with 1270-10 Brushing Thinner to remove residue. Apply two thin coats of this product. If the previous coating is poor in condition, then machine sand the bare surface by sanding with a paint and primer remover. Proceed with the appropriate type system as described above. Old Tin/opensprays should be removed or sealed with Pettit 6627 Tin Coat Primer before applying this product.

Remove Fouling: At bare fiberglass, regardless of age, must be thoroughly cleaned several times with Pettit 95 Fouling Dissolver or 1270-10 Brushing Thinner. Sand thoroughly with 60-grit paper to a dull, frosty finish and rinse with the sanding water with 95 Fouling Dissolver or 1270-10 Brushing Thinner to remove sanding residue. Then apply two coats of this product, following all applicable instructions. Careful observation of the above instructions will help ensure longer life of the fiberglass and subsequent years anti-fouling application. To eliminate the sanding operation, wash the fiberglass three times using Pettit 95 Unwaxer only. Then apply one coat of Pettit EZ-Fill Filler and then apply two coats of Pettit Primer. As directed above, cover the painted primer with the appropriate anti-fouling product. The label is intended for use with this product. The label is not intended for use with this product.

Brush Wood: Sand entire surface with 60-grit paper, wash down with 1270-10 Brushing Thinner. Apply a coat of this product thinned 20-30% with 1270-10 Brushing Thinner and allow to dry overnight. Then apply two thinned coats of this product.

Fouling Paints, Lead Koels, or other Underwater Metal Parts on Boats and Vehicles only: Consult Pettit Technical Bulletin TB 431 Pettit Paint Co. Primer for complete primer instructions. When the primer is completely dried, and the last of the epoxy has cured "thumprumpty" hard, the first coat of this product may be applied directly over the epoxy primer without sanding. Let dry, then apply the second coat of this product. Alternatively, if the last coat of epoxy primer to allowed to cure to full hardness, it must be sanded with the appropriate sanding paper and wiped clean before the first coat of this product is applied. This procedure produces less resin on the sanding paper and makes cleaning easier. For underwater metal parts and running gear, use Pettit 6465 Underwater Metal Kit which includes complete priming materials and instructions for use.

Warranty: We guarantee this material to comply with our published specifications. Since the use of this material is beyond our control, we disclaim responsibility for its handling, use, storage, the results obtained or any injury or damage of any nature resulting therefrom.
