This document contains instructions for the use of a hard antifouling paint. The paint is designed for use on boat bottoms and should be applied according to the provided guidelines. The contents of the paint are listed, along with recommendations for application and storage. The product is available in various colors and is suitable for fiberglass, wood, and properly primed surfaces. The application process involves cleaning, de-waxing, and sanding the surface before applying two coats of the paint. The document also provides information on the ingredients, environmental considerations, and disposal instructions. The product is made by Pettit Paint, with a registration number for its use in the United States. The paint is sold in various sizes and should be stored properly to maintain its effectiveness.
