**DIRECTORS OF USE**

In the event of a Federal law, the use of this product is only in any circumstance with its label. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. If this product contains inert ingredients, it must be in the same application. The term “inert” is defined as your state or federal, consult the agency responsible for pesticide regulation.

**Agricultural Use Requirements**

This product is intended for use by anyone except for the Worker Protection Standard, 40 CFR Part 170. Use reduction schemes are authorized as part of Extension Programs. The WPS applies to all products in all pressurized containers, and to all non-pressurized containers, in all indoor and outdoor areas. Use only according to label directions.

**Non-Agricultural Use Requirements**

The requirement in this product is applicable to the use of the Worker Protection Standard, 40 CFR Part 170. The WPS applies to all products in all pressurized containers, and to all non-pressurized containers, in all indoor and outdoor areas. Use only according to label directions.

**STORAGE AND DISPOSAL**

Proper pesticide storage and disposal are essential to protect people against potential hazards to the environment due to spills and toxicity. To avoid wastes, use all material in this container, including rinse water. Do not mix pesticides with other chemicals.

**PESTICIDE STORAGE**

Store pesticides away from food, feed, fuel, food, fodder, feedstuffs, and chemical-resistant gloves made of any waterproof material, such as polyethylene or polyvinylchloride.

**PERSONAL PROTECTIVE EQUIPMENT**

Take personal protective equipment (PPE) when handling this product. Call a veterinarian if symptoms persist for more than 24 hours. When reduced PPE is worn because a closed system is being used, handlers must wash PPE separately from other laundry.

**IF ON CLOTHING**

• Remove clothing immediately if pesticide gets inside.
• Wash hands before eating, drinking, using tobacco, or using the toilet.

**IF IN EYES**

• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.

**IF INHALED**

• Move the person to fresh air if possible. If not, administer oxygen or other respiratory assistance. Call a veterinarian or doctor for treatment advice.

**IF SWALLOWED**

• Do not give anything to eat or drink.
• Call a veterinarian or doctor for treatment advice.

Herbicide for Roundup Ready® Crops
Selective broad-spectrum weed control in Roundup Ready® crops. AVOID CONTACT OF THIS HERBICIDE WITH FOLIAGE, GREEN STEMS, EXPOSED NON-WOODY ROOTS, FRUIT, FLOWERS, OR FRUITING STRUCTURES OF CROPS. DO NOT APPLY TO ROUNDUP READY® CROPS AT STAGES 4 OR 5 OR IN A PRE-EMERGENCY APPLICATION. DO NOT USE WITH OR IN COMBINATION WITH HERBICIDES THAT CONTAIN AN ECONOMICALLY USEABLE AMOUNT OF A-lACTONE.

First Aid
• If in Eyes: Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice.
• If on Skin or Clothing: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 to 20 minutes. Call a poison control center or doctor for treatment advice.
• Have the product container or label with you when calling a poison control center or going for treatment. You can also call (314) 694-4000, collect, day or night, for emergency medical treatment information.

Note: This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96.
4.0 STORAGE AND DISPOSAL

Store this product in a cool, dry location under 90°F (32°C) and with proper ventilation. Do not leave in direct sunlight. Do not freeze. Cold storage for extended periods is not necessary. Do not allow to contact water. Keep out of children’s reach. Do not mix or combine with other products. Do not store in or near food, feed, livestock premises, or other material that may be contaminated or rendered unusable if this product is inadvertently mixed with it.

5.0 PRODUCT INFORMATION

Product Description: This product is a postemergence, systemic herbicide with a postemergence action. It is generally non-selective and poses great potential control of many annual weeds, perennial weeds, grasses, and vines. It is formulated as a water-soluble liquid containing glyphosate and may be applied using standard and specialized applicators. It is compatible with other herbicides and plant growth regulators in the same or different product classes.

Warranty: Follow all instructions on the label for warranty information.

6.0 WEED RESISTANCE MANAGEMENT

Weed Management: Use this product in conjunction with other weed management practices to prevent the emergence of glyphosate-resistant weeds. Do not allow the activity of this product to result in reduced weed control or crop injury.

7.0 Mixing with Water

Mixing with Water: Mix only the quantity of spray solution that will be applied that day. Tank mixtures should be prepared as follows:

2. Through the screen, fill the tank one-half full with water and start gentle agitation. (pounds acid equivalents) does not exceed the maximum allowed. See the "INGREDIENTS" section of this label for necessary product information.

This product may be mixed with other non-systemic herbicides to control annual weeds that are not in the crop under the same field conditions. Do not use this product in direct contact with any material that may be contaminated or rendered unusable if this product is inadvertently mixed with it.

8.0 Tunneling

Some solutions of this product may be mixed, stored, and applied using stainless steel, plastic, aluminum, or other metal containers.

9.0 Not Well-Stored or Applied: This product is only being sold as indicated on the label. Do not mix or combine with other products. Do not store in or near food, feed, livestock premises, or other material that may be contaminated or rendered unusable if this product is inadvertently mixed with it.
Although always required, surfactant may be added to sprays solutions of this product. Additional surfactant can increase the performance of this product in adverse weather conditions. To determine the appropriate concentration of 0.025 % to 2 percent or 20 parts of spray solution when using surfactant that contain less than 37 percent active ingredient, or 1 percent concentration (3 parts per 100 parts of spray solution) using surfactant that contain less than the 7 percent active ingredient. Read and carefully observe all precautionary statements and other information on the product label. Use of drift reduction additives does not affect spray coverage, which would impair the performance of this product.

8.4 APPLICATION EQUIPMENT AND TECHNIQUES

This product may be applied using the following equipment.

Aerial Application Equipment— Aircraft, Sprayers, Aircrane, or Aircrane with surfactant that contains at least 70 percent active ingredient, or a 1 percent surfactant concentration (4 quarts per 100 gallons water).

Ground Application Equipment—Four-Row Sisterns, field sprayers, sprayer sweeps, sprayer cups and other ground spreading application equipment.

Aircraft Sprayers—Backpack sprayers, pump-up sprayers, pressure sprayers, sprayer sweeps, backpacks, 

emulsifiable concentrate with two parts water and 

DO NOT add buffering agents or pH adjusting agents to the spray solution when applying. Nonionic surfactants that are labeled for use with herbicides may be used.

Colorants and marking dyes may be added to spray solutions of this product. These dyes and dyes according to the manufacturer’s instructions.

NOTICE: This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96

Measurements are in inches.
is applied on a day that is capable of completely enclosing the spray pattern, it is necessary when applying several rows to overlap. Avoid using tree and brush sprayers because the fog mist produced by these equipment is not effective. The ground sprayer should be used when the wind is blowing in excess of 10 miles per hour.

If the tank-mixing this product with 2,4-D, only 2,4-D amine formulations may be used. The mixtures of these two products are not recommended in tankmix application. The following recommendations have been obtained:

1. When tank-mixing 2,4-D with this product over 5 miles per hour, a buffer zone of at least 500 feet is needed to protect the undesirable vegetation or non-target crops.

2. When tank-mixing 2,4-D with this product over 2 miles per hour, a buffer zone of at least 100 feet is needed to protect the undesirable vegetation or non-target crops.

3. When tank-mixing 2,4-D with this product over 0.5 miles per hour, a buffer zone of at least 50 feet is needed to protect the undesirable vegetation or non-target crops.

LIMITATIONS ON AERIAL APPLICATION IN CALIFORNIA ONLY

PRIORITY ZONES:

1. When aerial spraying is made in California, the priority zones must be followed at all times. These priority zones include:

   a. Wildlife areas
   b. Native vegetation
   c. Endangered species
   d. Non-target crops
   e. Natural water bodies
   f. Agricultural areas
   g. Urban areas
   h. Rural areas

It is the responsibility of the grower, Pest Control Advisor and aerial applicator to determine if the application area is included in the priority zones. If the application area is included in the priority zones, the following procedures will help reduce the potential for crop injury when using a ground sprayer:

a. Whenever the ground sprayer is used, the following must be done:
   i. Keep the wiper surfaces clean.
   ii. Use low flow rates that will produce adequate coverage within the application area.
   iii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   iv. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   v. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   vi. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   vii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   viii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   ix. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   x. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.

b. When aerial spraying is made in California, the priority zones must be followed at all times. These priority zones include:

   a. Wildlife areas
   b. Native vegetation
   c. Endangered species
   d. Non-target crops
   e. Natural water bodies
   f. Agricultural areas
   g. Urban areas
   h. Rural areas

It is the responsibility of the grower, Pest Control Advisor and aerial applicator to determine if the application area is included in the priority zones. If the application area is included in the priority zones, the following procedures will help reduce the potential for crop injury when using a ground sprayer:

a. Whenever the ground sprayer is used, the following must be done:
   i. Keep the wiper surfaces clean.
   ii. Use low flow rates that will produce adequate coverage within the application area.
   iii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   iv. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   v. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   vi. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   vii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   viii. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   ix. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.
   x. Avoid using a crop that is not tolerant to the product being applied or any other crop that is not tolerant to the product being applied.

9.7 Glyphosate

**Indicated** for use with Roundup Ready canola and "Triflo™". On "Roundup Ready" canola, see the "ROUNDUP READY CROPS" section of this label.

**TYPES OF APPLICATION:** Those listed in Section 9.0, plus Spot Treatment; Hooded Sprayer; Preplant, At-Planting, Preemergence.

**RESTRICTIONS:** Do not exceed a total application rate of 5.3 quarts of this product per acre.

**USE INSTRUCTIONS:** This product may be applied as a replacement for tillage in Fallow Treatment.

9.8 Soybean

**Indicated** for use with Roundup Ready canola and "Triflo™". On "Roundup Ready" canola, see the "ROUNDUP READY CROPS" section of this label.

**TYPES OF APPLICATION:** Those listed in Section 9.0, plus Spot Treatment; Post-Harvest; Preplant, At-Planting, Preemergence.

**RESTRICTIONS:** Do not exceed a total application rate of 8.3 quarts of this product per acre.

**USE INSTRUCTIONS:** This product may be used as a replacement for tillage in Fallow Treatment.

9.9 Sugarcane

**Indicated** for use with Roundup Ready canola and "Triflo™". On "Roundup Ready" canola, see the "ROUNDUP READY CROPS" section of this label.

**TYPES OF APPLICATION:** Those listed in Section 9.0, plus Spot Treatment; Preplant, At-Planting, Preemergence.

**RESTRICTIONS:** Do not exceed a total application rate of 6.6 quarts of this product per acre.

**USE INSTRUCTIONS:** This product may be used as a replacement for tillage in Fallow Treatment.

For control of medusahead, apply 11 fluid ounces of this product per acre at the 3-leaf stage. Delaying application beyond this stage will result in reduced or unacceptable control. Controlled burning prior to application can be useful or acceptable control.

NOTE: This product may be applied in broadcast application in pasture to control excessive growth of medusahead. This application may be repeated every 30 days following application. Application of this product may also be repeated at least 2 times in a calendar year with a minimum 14-day interval between applications.

10.2.c. For control of cheatgrass, downy brome, and cereal rye, apply 5 to 11 fluid ounces of this product per acre at the 3-leaf stage. Delaying application beyond this stage will result in reduced or unacceptable control. Controlled burning prior to application can be useful for acceptable control.

11.5. Rangetop

11.5.b. Herbicide Resistance

In a broadcast application, use 5 fluid ounces of this product per acre. Efficacy can be expected to be reduced for applications greater than 5 fluid ounces per acre.

Inside Text (Even Pages)
**14.1 Annual Weed - Tank Mixtures with 2,4-D, Diuron or Tordon 22K**

Enlarged control of certain hard-to-control weeds can be achieved by combining the use of this product with a tank-mix containing 96 oz. of a herbicide in contact with the maximum height in length calculated. It increases roughly half to two-thirds in height and length the product at the rate of the herbicide. A beneficial effect from the tank mix used in the water content of the herbicide can be mixed with the products for control of the initial treatment.

**14.2 Annuals Weed - Handheld Sprayers**

For control of annuals in non-irrigated areas using ground application equipment, apply 33 fluid ounces of this product per acre when broadcast or 11 fluid ounces per acre when tank-mixed with an appropriate rate of 2,4-D in 10 to 20 gallons of water per acre. Use only ground application equipment. Application of this rate may be made in one or more applications of 2.5 gallons per acre (water + active ingredient) or a combination of 2.5 gallons per acre and tank-mixed diuron (28% solution) or mixed with an appropriate rate of 2,4-D or Tordon 22K (10% solution) in 2 to 3 gallons of water per acre. Use only ground application equipment. Application of this rate may be made in one or more applications of 2.5 gallons per acre (water + active ingredient) or a combination of 2.5 gallons per acre and tank-mixed diuron (28% solution) or mixed with an appropriate rate of 2,4-D or Tordon 22K (10% solution) in 2 to 3 gallons of water per acre. Use only ground application equipment.

**Application**

If weeds have been recently mowed or tilled, do not apply this product until 15 days after application. Avoid tillage prior to application. Tillage 7 to 10 days after application.

**Note:** This template can be used for a booklet with the following number of pages: 8, 12, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, 96.
NOTE: This template can be used for a booklet with the following dimensions:

- 7.125" (H) x 4.625" (W)
- 6.625" (H) x 4.125" (W)

In annual cropping systems or pastures and not fertilized or heavily fertilized with slow-release nitrogen sources, apply 27 fluid ounces of this product in 6 to 8 gallons of water per acre in the fall or spring. Application in the fall or spring reduces the risk of regrowth in the following spring. In established pastures and not fertilized or heavily fertilized with slow-release nitrogen sources, apply 27 fluid ounces of this product in 6 to 8 gallons of water per acre in the fall or spring. In annual cropping systems, apply 27 fluid ounces of this product in 6 to 8 gallons of water per acre in the fall or spring. In established pastures and not fertilized or heavily fertilized with slow-release nitrogen sources, apply 27 fluid ounces of this product in 6 to 8 gallons of water per acre in the fall or spring. In established pastures and not fertilized or heavily fertilized with slow-release nitrogen sources, apply 27 fluid ounces of this product in 6 to 8 gallons of water per acre in the fall or spring. **WINDBAG GROUND COVER**

WINDBAG GROUND COVER is a non-selective, pre-emergence herbicide used to control a wide variety of annual and perennial weeds. It is effective on both young and old plants, including those that have been mowed or treated with other herbicides. WINDBAG GROUND COVER is ideal for use in no-till, reduced-till, and other conservation tillage systems. It can be applied as a spray or a band after planting, before or after emergence of the annual and perennial weeds. WINDBAG GROUND COVER is formulated to provide residual control for up to 3 months, ensuring effective weed control throughout the growing season.

**APPLICATION INSTRUCTIONS**

- **Pre-plant applications**: Apply to the soil surface before planting. Ensure thorough coverage for effective weed control. Use a Handheld Sprayer for small areas or a Crop Sprayer for larger areas.
- **Post-emergence applications**: Apply to the soil surface around the plants. Use a Handheld Sprayer for small areas or a Crop Sprayer for larger areas.
- **Frequency**: Apply once a year for best results. Follow the recommended rates and application times to achieve optimal weed control.
- **Insecticidal**
- **Residues**
- **Stability**
