HARMFUL if absorbed through skin. Causes moderate eye irritation. Harmful if inhaled. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Avoid breathing dust. Remove and wash contaminated clothing before reuse.

CAUTION

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements established in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR part 170, subpart C (d)(4)-(6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is used, handlers must be provided all PPE specified above for “Applicators and Other Handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

FIRST AID

IF INHALED: Call a Poison Control Center or doctor for treatment advice. You may also contact 1-800-441-3637 for emergency medical treatment information.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a Poison Control Center or doctor for treatment advice.

If in Eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a Poison Control Center or doctor for treatment advice.

If Ingested: Stimulate vomiting if patient is conscious and breathing. Do not induce vomiting if patient is unconscious. Give 1-2 cups of water or milk. Call a Poison Control Center or doctor for further treatment advice.

KEEP OUT OF REACH OF CHILDREN

CAUTION

Toxic to non-target plants and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intermittent areas below the mean high water mark. Shift or runoff may be hazardous to non-target plants and aquatic organisms in neighboring areas. Do not apply where runoff is likely to occur. Do not apply where runoff is likely to cause drift from treated areas. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsates.

This product is toxic to non-target plants and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intermittent areas below the mean high water mark. Shift or runoff may be hazardous to non-target plants and aquatic organisms in neighboring areas. Do not apply where runoff is likely to occur. Do not apply where runoff is likely to cause drift from treated areas. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsates.

This pesticide is toxic to plants and should be used strictly in accordance with the drift and runoff precautions on this label in order to minimize off site exposures. Under some conditions this product may have a potential to run off to surface water or adjacent land. Where possible, use methods which reduce erosion, such as no till, limited till and contour plowing. Planting methods which reduce pesticide run-off will be effective.

Use of vegetation filter strips along rivers, creeks, streams, wetlands or on the downhill side of fields where rain off could occur will minimize pesticide rain off and is recommended.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

ENVIRONMENTAL HAZARDS

This product is toxic to non-target plants and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intermittent areas below the mean high water mark. Shift or runoff may be hazardous to non-target plants and aquatic organisms in neighboring areas. Do not apply where runoff is likely to occur. Do not apply where runoff is likely to cause drift from treated areas. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsates.

BATCH STICKER
DuPont™ Herbicide 790 SB herbicide, applied at 2.5 - 3.75 oz/acre, will burndown the following weeds. Regrowth from treated weeds is unlikely to occur. It is the pesticide user’s responsibility to ensure that all products are registered for the correct target crop.

**PRODUCT INFORMATION**

**ACTION INGREDIENTS**

- DuPont™ Herbicide 790 SB is a dispersible granule formulation to be mixed with water. It contains the active ingredient glyphosate plus the following co-formulants: tri(lithium) poly(ethylene glycol) succinate, potassium sorbate and citric acid. It is intended to be used in conjunction with other labeled herbicides and application equipment to provide a complete solution for controlling weeds in soybeans. It is intended for use on soybeans after emergence. It is not a stand-alone herbicide.

**DISSOLVING AND STORAGE**

- Herbicide 790 SB must be emptied into the spray tank and used in accordance with the label instructions. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. This product is toxic to aquatic organisms, and in some cases, may cause long-term adverse effects in the aquatic environment. Use of this product is subject to environmental & safety restrictions. To ensure that all precautions are observed, read and follow all label directions and precautions for use of the respective Sequential treatments.

**BIOPHYSICAL ACTIVITY**

Herbicide 790 SB is a water soluble product. The rate of absorption and rate of crop injury will vary depending on factors such as temperature, soil type, and amount of rainfall received. Use herbicide 790 SB 7 days before or after an application of a sequential treatment that contains a herbicide with a similar mode of action to herbicide 790 SB (Group 2 or Group 14). For glyphosate-tolerant soybeans, herbicide 790 SB can be followed by an in-crop application of a labeled sequential treatment. For non-glyphosate-tolerant soybeans, a labeled sequential treatment containing an herbicide with a different mode of action must be applied to prevent injury to the soybean crop. Herbicide 790 SB is effective in controlling various annual and perennial weeds in soybeans. It is effective against a wide range of weeds, including those that are difficult to control with other herbicides. It is a systemic herbicide, which means that it is absorbed through the leaves and roots of the plant, and moves throughout the plant to the roots and into the grain. Herbicide 790 SB is a non-selective herbicide, which means that it kills both desirable and weed plants. It is a broad-spectrum herbicide, which means that it is effective against a wide range of weeds, including those that are difficult to control with other herbicides.

**restrictions**

- Herbicide 790 SB is a water soluble product. The rate of absorption and rate of crop injury will vary depending on factors such as temperature, soil type, and amount of rainfall received. Use herbicide 790 SB 7 days before or after an application of a sequential treatment that contains a herbicide with a similar mode of action to herbicide 790 SB (Group 2 or Group 14). For glyphosate-tolerant soybeans, herbicide 790 SB can be followed by an in-crop application of a labeled sequential treatment.
