WATER DISPERSIBLE GRANULE
OutRider® Herbicide is a selective herbicide for the control of certain annual and perennial grasses and broadleaf weeds in select pasture grasses and rangelands, non-crop areas and in winter and spring wheat. Carefully follow detailed instructions in label pamphlet.

Keep out of reach of children

CAUTION!
Read precautions on back panel. Read the entire label before using this product. Use only according to label instructions. Not all products referred to in this label are registered for use in California. Check the registration status of each product in California before using. Read the LIMIT OF WARRANTY AND LIABILITY before buying or using. If terms are not acceptable, return at once unopened.
THIS IS AN END-USE PRODUCT. VALENT U.S.A. LLC DOES NOT INTEND AND HAS NOT REGISTERED IT FOR REFORMULATION OR REPACKAGING.

ACTIVE INGREDIENT:
Sulfsulfuron ....................................................................................... 75.0%
OTHER INGREDIENTS ........................................................................... 25.0%
100.0%

NET 20 OZ UNIT

</tbody>
</table>

• Have the product container or label with you when calling a poison control center or physician, or going for treatment. • In case of an emergency involving this product, Call, day or night, 800-892-0099. • This product is identified as Outrider Herbicide, EPA Reg. No. 59639-223.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in any manner inconsistent with its labeling.

For product information or assistance in using this product, Call toll-free, 800-682-5368.

Storage and Disposal
Proper pesticide storage and disposal are essential to protect against exposure to people and the environment due to leaks and spills, excess product or waste, and vandalism. Do not allow this product to contaminate water, foodstuffs, feed or seed by storage or disposal. PESTICIDE STORAGE: Store pesticides away from food, pet food, feed, seed, fertilizers, and veterinary supplies. Keep container closed to prevent spills and contamination. PESTICIDE DISPOSAL: To avoid wastes, use all material in this container, including rinsate, by application in accordance with label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program. Such programs are often run by State or local governments or by industry. All disposal must be in accordance with applicable Federal, State and local procedures. CONTAINER HANDLING: Nonrefillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned stay out of smoke.

Domestic Animals

ACTIVE INGREDIENT: Sulfosulfuron, the active ingredient in this product, is a Group 2 herbicide based on the chemical class of sulfonylureas. Sulfosulfuron is a selective, systemic herbicide, which is a product of the same mode of action as its predecessor 2,4-D chlorsulfuron. Sulfosulfuron inhibits the enzyme acetolactate synthase (ALS). The interaction of many equipment- and weather-related factors determines the effectiveness of the product. Annual and perennial weeds tolerant to current herbicides or other herbicides with the same mode of action. Biotypes are combinations of plants developed by random mutations, followed by selection. For annual or perennial weeds tolerant to herbicides, combinations of weeds with different resistance mechanisms (biorotypes) may be needed. Combining a different ALS inhibitor, a non-ALS herbicide or a surfactant with additional modes of action may be needed to control the mixture of ALS-resistant biotypes.

INSTRUCTIONS FOR USE

* For additional broadleaf weed control, this product may be applied as a spring preemergence application, with MCPA alone or with other tank-mixed herbicides, on non-irrigated wheat at 1.33 lbs ai/acre. For use on wheat all other tank-mixed herbicides may be applied in a single application or sequentially, as described in the Directions for Use. For winter wheat, see Table 2. When using this product sequentially, assure that the wheat or the desired crop is adequately grown in these areas.
