Manufactured for:
**Atticus, LLC**
5000 CentreGreen Way, Suite 100
Cary, NC 27513
FIRST AID
If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything to an unconscious person.

If inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.
• Call a poison control center or doctor for treatment advice.

If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for further treatment advice.

For Chemical Emergency: Spill, Leak, Fire, Exposure, or Accident, Call CHEMTREC Day or Night Within USA and Canada: 1-800-424-9300 or +1 703-527-3887 (collect calls accepted)

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Harmful if swallowed. Harmful if inhaled. Harmful if absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
All handlers (mixers, loaders, and applicators, or individuals performing one or more of these tasks) must wear:
• Long-sleeved shirt and long pants
• Shoes plus socks
• Chemical-resistant gloves, including nitrile or butyl rubber > 14 mils
• Chemical-resistant apron, for all mixers and loaders and other handlers exposed to the concentrate

Remove and wash contaminated clothing before reuse. Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product’s concentrate. Do not reuse them.

ENGINEERING CONTROLS
Pilots must use an enclosed cockpit that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d)(6)].

USER SAFETY RECOMMENDATIONS
Users should:
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to fish and shrimp. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment, or disposing of equipment wash waters or rinsate. Refer to product labeling for use restrictions to protect endangered species.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

RESTRICTIONS
Rotational Crops: To avoid possible illegal residues, do not plant any other crop intended for food, grazing, or any component of animal feed or bedding within 105 days of an application of TALARIS XL to the preceding crop unless the second crop appears on this label. Alfalfa may be planted 75 days after the last application of TALARIS XL if the total application of propiconazole has not exceeded 0.22 pound active ingredient per acre during the previous year.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI). Refer to Crop Specific Instruction section for details.

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, including plants, soil, or water is:
• Coveralls over long-sleeved shirts and long pants
• Chemical-resistant gloves made of any waterproof material
• Chemical-resistant footwear plus socks
• Chemical-resistant headgear for overhead exposures

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for Agricultural Pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, and greenhouses.

Entry Restrictions for Non-WPS Uses: Do not enter or allow others to enter until sprays have dried.

The active ingredient in this product may have effects on federally-listed threatened and endangered species or critical habitat in some counties. When using this product, you must follow the measures contained in the County Bulletin for the county in which you are applying the pesticide. To determine whether your county has a bulletin, consult https://www.epa.gov/endangered-species. Bulletins may also be available from local pesticide dealers, extension offices, or state pesticide agencies.
PRODUCT INFORMATION
TALARIS XL is a broad-spectrum fungicide for the control of certain diseases in Almonds, Peanuts, Pecans, Soybeans, Stone Fruits, Strawberries, Sugar Beets, Wheat, Turf and Ornamentals. Failure to follow directions and precautions on this label may result in crop injury, poor disease control, and/or illegal residues.

Restriction: Do not use in greenhouses or as a tree injection.

INTEGRATED PEST MANAGEMENT
TALARIS XL should be integrated into an overall disease and pest management (IPM) strategy whenever the use of a fungicide is required. Cultural practices known to reduce disease development should be followed. Consult your local agricultural authorities for additional IPM strategies established for your area. This product may be used in state agricultural extension advisory (disease forecasting) programs using the specified application timing based upon environmental factors favorable for disease development.

FUNGICIDE RESISTANCE MANAGEMENT
Propiconazole belongs to the sterol demethylation inhibitor (DMI) class of fungicides and is classified as a Group 3 Fungicide. Thiophanate-methyl belongs to the Methyl Benzimidazole Carbamates (MBC) class of fungicides and is classified as a Group 1 Fungicide. Since certain fungi can develop resistance to these classes of products, the use of TALARIS XL should be part of a resistance management strategy that includes alternation and/or tank mixing with another fungicide mode of action. Because resistance development cannot be predicted, use of this product should conform to resistance management strategies established for the crop and use area. Rotate to a product that is effective on the target pathogen and has a mode of action different from this product. Apply the alternate products within the intervals specified on this product’s label. Do not apply this product at rates below those specified on the label. If tank mixing, use the full label rate of this product with the full label rates of the other products effective on the target pest. Consult your local or state agricultural authorities for resistance management strategies that are appropriate for your disease management program. This product should not be alternated or tank-mixed with any fungicide to which resistance has already developed.

SPRAY EQUIPMENT
Thorough coverage is necessary to provide good disease control. To avoid spray drift, do not apply when conditions favor drift beyond the target area. Avoid spray overlap as crop injury may occur. Air assisted or air blast sprayers move spray droplets into the canopy using a forced air stream. Set up the fan to deliver only enough air volume to penetrate the canopy and provide good coverage. Adjust deflectors or other aiming devices to direct spray only to the target area. Equip sprayers with nozzles that provide accurate and uniform application. Be certain that nozzles are the same size and uniformly spaced across the boom. Calibrate the spray before use. Use a pump with sufficient capacity to maintain 35 to 40 PSI at nozzles and provide sufficient agitation in tank to keep mixture in suspension (this requires recirculation of 10% of tank volume per minute). Use a jet agitator or liquid sparger tube for agitation. Do not use air sparging. Although TALARIS XL is an emulsifiable concentrate, it is suggested that screens be used to protect the pump and to prevent nozzles from clogging. For screens placed on suction side of pump use 16-mesh or coarser. Do not place a screen in the recirculation line. Use 50-mesh or coarser screens between the pump and boom and, where required, at the nozzles. Check nozzle manufacturer’s directions. For more information on spray equipment and calibration, consult sprayer manufacturers and state directions. For specific local directions and spray schedules, consult the current state agricultural experiment station directions.

MIXING INSTRUCTIONS
Prepare no more spray mixture than is required for the immediate operation. Thoroughly clean spray equipment before using this product. Agitate the spray solution before and during application. Rinse spray tank thoroughly with clean water after each day’s use and dispose of pesticide rinsate by application to an already treated area.

TALARIS XL (Alone)
Add 1/2 to 2/3 of the required amount of water to the spray or mixing tank. With the agitator running, add TALARIS XL to the tank. Continue agitation while adding the remainder of the water. Begin application of the spray solution after this product has completely dispersed into the mix water. Maintain agitation until all of the mixture has been sprayed.

TALARIS XL (in Tank Mixes)
It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. TALARIS XL is usually compatible with all tank mix partners listed on this label. To determine the physical compatibility of this product with other products, use a jar test. Using a quart jar, add the proportionate amounts of the products to 1 quart of water. Add wettable powders and water dispersible granular products first, then liquid flowables and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank. Add 1/2 to 2/3 of the required amount of water to the spray or mixing tank. With the agitator running, add the tank mix partner into the tank. Allow the material to completely dissolve and disperse into the mix water. Continue agitation while adding the remainder of the water and this product to the spray tank. Allow this product to completely disperse. Spray the mixture with the agitator running.

Do not apply this product in a tank mix with a dodine fungicide or crop injury may occur.

It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. Do not tank mix this product with any product that prohibits such mixing. Tank mixes or other applications of products referenced on this label are permitted only in those states in which the referenced products are registered.

APPLICATION INSTRUCTIONS
TALARIS XL is most effective when applied and allowed to dry before a rainfall. Avoid applying this product under conditions when uniform coverage cannot be obtained or when excessive spray drift may occur. Do not apply in a manner which results in exposure to humans or animals.

Spray Drift Management
A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Wind Speed
Do not apply at wind speeds greater than 15 mph.

Droplet Size
Apply as a medium or coarse spray (ASABE Standard 572).

Temperature Inversions
If applying at wind speeds less than 3 mph, the applicator must determine if:

- Conditions of temperature inversion exist, or
- Stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

Other State and Local Requirements
Applicators must follow all state and local pesticide drift requirements. Where states have more stringent regulations, they must be observed.

Equipment
All application equipment must be properly maintained and calibrated using appropriate carriers or surrogates.
Aerial Application
1. The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.
2. Release spray at the lowest height consistent with efficacy and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy unless a greater height is required for aircraft safety.
3. When applications are made with a crosswind, the swath must be displaced downwind. The applicator must compensate for this displacement at the up and downwind edge of the application area by adjusting the path of the aircraft upwind.

Ground Application
• For tree crops, apply this product in a minimum of 50.0 gallons of water per acre.
• For all other crops, apply this product in a minimum of 10.0 gallons of water per acre.

Aerial Application
• For tree crops, apply this product in a minimum of 10.0 gallons of water per acre.
• For all other crops, apply this product in a minimum of 2.0 gallons of water per acre.

Chemigation Application
• Determine the amount of TALARIS XL to be applied.
• Determine the time required to apply 1/8 to 1/2 inch of water over the area to be treated.
• Determine size of area to be treated.
• Determine the acreage covered by the sprinkler.

Chemigation Precautions
• Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems. Do not apply this product through any other type of irrigation system.
• Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.
• If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers, or other experts.
• Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.
• A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments if the need arise.
• Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
• Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone (RPZ) backflow preventer or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. Note: Do not inject this product at full strength or dilution ratio of at least 10 parts water to 1 part TALARIS XL. This product is corrosive to many seal materials. Leather seals are best. EPDM or silicone rubber seals can be used but must be replaced once a year. Do not use Viton, Buna-N, Neoprene, or PVC seals.

Specific Equipment Requirements
• The system must contain a functional check-valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.
• The pesticide injection pipeline must contain a functional, automatic, quick-closing check-valve to prevent the flow of fluid back toward the injection pump.
• The pesticide injection pipeline, must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
• The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
• The irrigation line or water pump must include a functional pressure switch that will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
• Systems must use a metering pump, including a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
• Do not apply when wind speed favors drift beyond the area intended for treatment.

Center Pivot Irrigation Equipment
• Use only with drive systems that provide uniform water distribution.
• Do not use end guns when applying TALARIS XL through center pivot systems because of nonuniform application.
• Determine size of area to be treated.
• Determine the amount of TALARIS XL required to treat the area covered by the irrigation system.
• Add the required amount of TALARIS XL and sufficient water to meet the injection time requirements of the solution tank.
• Make sure the system is fully charged with water before starting injection of TALARIS XL. Time the injection to last at least as long as it takes to bring the system to full pressure.
• Maintain constant solution tank agitation during the injection period.
• Stop injection equipment after treatment is completed. Continue to operate the system until the solution of TALARIS XL has cleared the sprinkler head.

Solid-Set, Hand Move, and Moving Wheel Irrigation Equipment
• Determine the acreage covered by the sprinkler.
• Fill the injector solution tank with water and adjust flow rate to use the contents over a 20-to 30-minute interval. When applying TALARIS XL through irrigation equipment, use the lowest obtainable water volume while maintaining uniform distribution.
• Determine the amount of TALARIS XL required to treat the area covered by the irrigation system.
• Add the required amount of TALARIS XL into the same quantity of water used to calibrate the injection equipment.
• Maintain constant solution tank agitation during the injection period.
• Operate the system at normal pressures specified by the manufacturer of the injection equipment and used for the time interval established during the calibration.
• Inject TALARIS XL at the end of the irrigation cycle or as a separate application to maximize foliar fungicide retention.
• Stop injection equipment after treatment is completed. Continue to operate the system until the solution of TALARIS XL has cleared the last sprinkler head.
CROP-SPECIFIC INSTRUCTIONS

ALMONDS

Restrictions
• Do not apply more than 7.5 pints per acre per year of TALARIS XL.
• Maximum amount of propiconazole allowed per year: 0.9 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 2.1 lbs. ai/year.
• Do not graze livestock in treated areas or cut treated cover crop for feed.
• Preharvest Interval (PHI): 60 days
• Restricted Entry Interval (REI): 3 days

Application Methods
• Ground: Apply the specified amount in a minimum of 50.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 15.0 gallons water per acre.
• Chemigation: Not allowed on this crop.

Target Disease | Application Rate Pint Per Acre | Application Timing and Instructions
--- | --- | ---
Brown rot blossom blight (Monilinia laxa, M. fructicola) | 2.66 | Apply this product at 5% to 10% bloom and again at 50% to 100% bloom. Minimum retreatment interval is 7 days.
Jacket rot (Monilinia, Sclerotinia, Botrytis) | 2.66 | Apply TALARIS XL beginning at bud break on a 7- to 14-day interval.
Leaf blight (Seimatosporium) | 2.66 | Apply this product at 5% to 10% bloom and again at 50% to 100% bloom. Minimum retreatment interval is 7 days.
Scab (Cladosporium) | 2.66 | Apply TALARIS XL beginning at bud break on a 7- to 14-day interval.

PEANUTS

TALARIS XL is most effective when applied and allowed to dry before rainfall.

Restrictions
• Do not apply more than 5.0 pints per acre per year of TALARIS XL.
• Maximum amount of propiconazole allowed per year: 0.45 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 1.4 lbs ai/year.
• Do not feed hay from treated fields to livestock if the high rate is used (2.5 pints per acre).
• Preharvest Interval (PHI): 14 days with the low use rate (1.25 pints per acre).
• Preharvest Interval (PHI): 21 days with the high use rate (2.5 pints per acre).
• Restricted Entry Interval (REI): 3 days

Application Methods
• Ground: Apply the specified amount in a minimum of 10.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 2.0 gallons water per acre.
• Chemigation: Apply in 0.1 to 0.25 inches of water.

Target Disease | Application Rate Pint Per Acre | Application Timing and Instructions
--- | --- | ---
Early leaf spot (Cercospora arachidicola) | 0.83 – 1.25 | Apply beginning 35 to 40 days after planting or at the first appearance of disease and reapply on a 10- to 14-day schedule. Under heavy disease pressure, use the higher rate. This product may also be used in State Agricultural Extension advisory (disease forecasting) programs which specify application timing based upon environmental factors favorable for disease development.
Late leaf spot (Cercosporidium personatum) | 1.25 | Optimum control of Limb and Pod rot may be obtained by combining TALARIS XL applications with a chlorothalonil fungicide. See the table below for timing of applications.
Limj rot and Ped rot (Rhizoctonia solani) | 1.25 | Moderate to heavy White mold infestations may not be fully controlled. Another suitable fungicide containing tebuconazole and/or flutolanil may be added to the tank to improve control of White mold.
Rust (Puccinia arachidis) | 1.25 | Southern stem rot (Sclerotium rolfsii) | 1.25 | Apply to the crown and pegging zones of the plant by chemigation or directed ground application.
Web blotch (Phoma arachidicola) | 1.25 | Begin applications 45 days after planting or at the first appearance of disease. Repeat on a 14-day interval. When applying in irrigation water for Southern stem rot control, use a minimum of 0.25 to 0.5 inch of water per acre. Use enough water so the fungicide penetrates the peanut canopy and reaches the crown of the plant where the disease is most active. When applying via irrigation or as a directed ground application, additional methods should be employed for leaf spot control. Moderate to heavy White mold infestations may not be fully controlled. Another suitable fungicide containing tebuconazole and/or flutolanil may be added to the tank to improve control of White mold.

PECANS

Restrictions
• Do not apply more than 7.5 pints per acre per year of TALARIS XL.
• Maximum amount of propiconazole allowed per year: 0.9 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 2.1 lbs. ai/year.
• Do not apply after shuck split.
• Do not graze livestock in treated areas or cut treated cover crop for feed.
• Restricted Entry Interval (REI): 3 days
• Preharvest Interval (PHI): 30 days

Application Methods
• Ground: Apply the specified amount in a minimum of 50.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 15.0 gallons water per acre.
• Chemigation: Not allowed on this crop.

SOYBEANS

TALARIS XL is most effective when applied and allowed to dry before rainfall.

Restrictions
• Do not apply more than 4.0 pints per acre per year of TALARIS XL.
• Maximum amount of propiconazole allowed per year: 0.34 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 1.4 lbs. ai/year.
• Apply up to Stage R6
• Do not graze or feed treated vines or hay to livestock.
• Restricted Entry Interval (REI): 1 day
• Preharvest Interval (PHI): 21 days

Application Methods
• Ground: Apply the specified amount in a minimum of 10.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 2.0 gallons water per acre.
• Chemigation: Not allowed on this crop.

<tr>
<td>Aerial web blight (Rizoctonia solani)</td>
<td>2.0</td>
<td>Aerial web blight: Apply 2.0 pt./A at the first appearance of disease and repeat the application 14- to 21-days later. Under severe disease conditions use the shorter interval. Soybean rust: Apply 2.0 pt./A at first indication that disease is in the area. For best control, use preventative applications. Repeat on 14- to 21-day interval. Use the shorter interval when disease is present in field and incidence is less than 2% (2 plants in 100 are infected). If incidence is greater than 2% or if disease is in mid canopy, control will not be acceptable. Scouting for the disease and/or being aware of the proximity of the disease via monitoring systems will aid in the proper timing to maximize the effectiveness of the fungicide applications. White mold: Apply at growth stage R1-R2 and repeat on a 14-day interval. Other foliar diseases: Apply 2.0 pt./A at growth stage R3 (early pod set when pods are 1/8 to 1/4-inch-long) and 14- to 21-days later at growth stage RS (pod fill). On certain varieties, applications of this product may cause crinkled, smaller and/or greener leaves. Yields of dry beans displaying these characteristics have not been reduced due to TALARIS XL treatments.</td>

STONE FRUITS

Apricots, Chickasaw Plum, Damson Plum, Japanese Plum, Nectarine, Peach, Plum, Plum-Cot, Prune, Sweet Cherry, Tart Cherry, and cultivars and/or hybrids of these included in the stone fruits crop grouping

Restrictions
• Do not apply more than 6.6 pints per acre per year of TALARIS XL.
• Maximum amount of propiconazole allowed per year: 0.56 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 2.8 lbs ai/year
• Preharvest Interval (PHI): 10 days
• Restricted Entry Interval (REI): 2 days

Precautions
Applications of TALARIS XL during bloom to Stanley plums have occasionally caused fruit to be less oval in shape and smaller in size at harvest. To avoid this, do not apply to Stanley plums earlier than 21 days before harvest.

Application Methods
• Ground: Apply the specified amount in a minimum of 50.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 15.0 gallons water per acre.
• Chemigation: Not allowed on this crop.

For best control of stone fruit diseases, apply by ground application.

SUGAR BEETS

Restrictions
- Do not apply more than 4.0 pints per acre per year of TALARIS XL.
- Maximum amount of propiconazole allowed per year: 0.34 lb. ai/year.
- Maximum amount of thiophanate-methyl allowed per year: 2.1 lbs. ai/year (except CA).
- Maximum amount of thiophanate-methyl allowed per acre in California: 0.35 lb. ai/acre
- Preharvest Interval (PHI): 21 days.
- Restricted Entry Interval (REI): 1 day.

Application Methods
- Ground: Apply the specified amount in a minimum of 50.0 gallons water per acre.
- Aerial: Apply the specified amount in a minimum of 15.0 gallons water per acre.
- Chemigation: Apply in 0.1 to 0.25 inches of water.
- Leaf spot *(Cercospora beticola)*
- Powdery Mildew *(Erysiphe polygoni)*
- 1.25 – 1.33 (in CA use 1.25)
- Begin applications at first sign of disease. Repeat on a 10- to 14-day interval. Make no more than 2 consecutive applications before rotating to another registered fungicide with a different mode of action. If disease levels continue to increase, immediately switch to a fungicide with a different mode of action. TALARIS XL may be tank-mixed with a protectant fungicide including mancozeb when resistant strains of Cercospora are present. Do not make more than 1 application per year for Cercospora leaf spot.
WHEAT (FALL SEEDED ONLY)

Restrictions
• For use in Idaho, Oregon and Washington only.
• Do not apply more than 2.50 pints per acre per year of TALARIS XL.
• Do not apply more than 1.25 pints of TALARIS XL (0.31 pound of propiconazole) per acre per year if forage or hay will be harvested.
• Do not allow livestock to graze in treated areas before harvest.
• Maximum amount of propiconazole allowed per year: 0.22 lb. ai/year.
• Maximum amount of thiophanate-methyl allowed per year: 0.70 lb. ai/year.
• Do not apply after Feekes growth stage 10.5 (straw and grain).
• Preharvest Interval (PHI): 90 days
• Restricted Entry Interval (REI): 1 day

Application Methods
• Ground: Apply the specified amount in a minimum of 10.0 gallons water per acre.
• Aerial: Apply the specified amount in a minimum of 2.0 gallons water per acre.
• Chemigation: Apply in 0.10 to 0.25 inches of water.

Target Disease | Application Rate Pint Per Acre | Application Timing and Instructions
--- | --- | ---
Control of leaf diseases: Glume blotch (Stagonospora nodorum) Helminthosporium leaf blight (Drechslera tritici-repentis) Leaf blight (Septoria triticum) Net blotch (Pyrenophora teres) Powdery mildew (Blumeria spp., Erysiphe spp.) Rust (Puccinia spp.) Spot blotch (Bipolaris sorokiniana) Tan spot (Pyrenophora tritici-repentis) Eye spot (Pseudocercosporella spp.) Foot rot Straw breaker Fusarium head blight suppression 1.33 Protecting the flag leaf is important for maximizing the potential yield. Highest yields are normally obtained when this product is applied when the flag leaf is 50% to fully emerged. The minimum retreatment interval is 14 days. Using an oil base adjuvant may improve the spray coverage and canopy penetration. Do not apply after full head emergence (Feekes growth stage 10.5) to avoid possible illegal residues. Apply at tillering but before elongation has occurred. Apply this product at approximately 50% flowering. Addition of a penetrating type of adjuvant including Liberate may increase Fusarium head blight suppression.

TURFGRASS AND ORNAMENTAL INSTRUCTIONS

Product Information
TALARIS XL is a systemic fungicide for use on turfgrass for the control of the diseases below. TALARIS XL also controls numerous diseases on ornamentals and other landscape and nursery plantings, including powdery mildews, rusts, leaf spots, scabs, and blights. Refer to the appropriate section for specified diseases and plants.

Tank Mixes of TALARIS XL for Turfgrass and Ornamental Applications See Mixing Instructions Section

Add E-Z Mix compatibility agent (3.0 pints per 100 gallons) to tank mixes if necessary. It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. Tank mixes or other applications of products referenced on this label are permitted only in those states where referenced products are registered.

USE INSTRUCTIONS

TURFGRASS

• Use TALARIS XL in a preventative disease control program.
• Apply in sufficient water to ensure thorough coverage.
• Apply after mowing or allow sprayed area to dry completely before mowing.
• For control of foliar diseases, allow sprayed area to dry completely before irrigation.
• For control of soilborne diseases, water in immediately after application.
• Under conditions that are optimum for high disease pressure, use the higher rate and shorter interval.
• For optimum turfgrass quality and disease control, use TALARIS XL in conjunction with turf management practices that promote good plant health and optimum disease control.
• Evaluate spray additives prior to use. Label directions are based upon data obtained with no additives.
• Before using any fungicide, proper diagnosis of the organism causing the disease is important. Using diagnostic kits or other means of identification of the disease organism is essential to determine the best control measures.

Use Restrictions

• Maximum amount of TALARIS XL allowed per year: refer to table below for maximum application rates on specific turf sites.
• Maximum amount of thiophanate-methyl and propiconazole allowed per year: refer to table below for maximum application rates on specific turf sites.
• Do not graze animals on treated areas.
• Do not feed clippings from treated areas to livestock or poultry.

</table>
Establishment of Cool Season Turfgrass

TALARIS XL controls many turfgrass diseases; its primary use is as a fungicide for use against the diseases listed on this label. As an additional benefit, this product improves the rate of establishment when it is applied to cool season turfgrass seedlings or sod.

Observe site specific maximum individual and annual application rates in the Maximum Application Rates table above.

New Seedlings: Apply up to 1.5 fluid ounces per 100 square feet at the 2- to 3-leaf stage of growth for faster root development and top growth.

Sod: Apply up to 1.5 fluid ounces per 1000 square feet 2 to 6 weeks before cutting for increased sod knitting and faster establishment after laying.

Ornamental Plants

Use TALARIS XL in a preventative disease control program. To determine the use directions for controlling a disease on an ornamental plant species, select the plant species in Table 1. The number(s) in parentheses following the listed plant species refers to the disease(s) controlled in Table 2. Find the disease in Table 2.

The letter in brackets following the disease refers to the application regime in Table 3. Allow spray to dry before applying overhead irrigation.

Optimum benefit of TALARIS XL is obtained when used in conjunction with sound disease management practices.

USE INSTRUCTIONS

Application Rates

TALARIS XL may be used at rates of 4.0 to 46.3 fluid ounces per 100 gallons of water for disease control in ornamentals (see Tables 1, 2 and 3). For best control, begin applications before disease development. For general disease control in landscapes, apply 11.7 to 16.0 fluid-ounces per 100 gallons water every 21 days. For best control, begin TALARIS XL applications before disease development.

Use Restrictions

To avoid possible illegal residues, do not apply to Bartlett pear, cherry, citrus, nectarine, peach, pecan, plum, or walnut trees that will bear harvestable fruit within 12 months. For outdoor uses, up to 10.6 gallons of TALARIS XL may be applied per acre per year.

Use Precautions

Plant tolerances to TALARIS XL have been found acceptable for the specific genus and species of plants listed under the Directions for Use. Do not apply this product to African violets, begonias, Boston fern, or geraniums. Other plant species may be sensitive to TALARIS XL and diseases other than those listed may not be controlled.

Before using TALARIS XL on plants or for diseases that are in the Directions for Use, first test this product on a small-scale basis. Apply according to listed rates for a particular disease type, i.e., rust, powdery mildew, etc., and evaluate for phytotoxicity and disease control prior to widespread use.

**TALARIS XL**

Do not contaminate water, food, or feed by storage or disposal.

**STORAGE**: Store in original container in secured dry storage area. Prevent cross-contamination with other pesticides and fertilizers. For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes.

**PESTICIDE DISPOSAL**: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinseate is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**CONTAINER HANDLING: Nonrefillable container.** Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinseate). After emptying and cleaning, it may be allowable to temporarily hold rinseate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact The Agricultural Container Recycling Council (ACRC) at www.acrcycle.org. If not recycled, then puncture and dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities, by burning. If burned, stay out of smoke. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

For packages up to 5 gallons: **Triple rinse as follows**: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

For packages greater than 5 gallons and less than 56 gallons: **Triple rinse as follows**: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

For packages greater than 56 gallons: **Triple rinse as follows**: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or mix tank and collect rinseate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip.

For refillable containers: Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinseate into application equipment or rinseate collection system. Repeat this rinsing procedure two more times.

For help with any spill, leak, fire or exposure involving this material, call day or night CHEMTREC at 1-800-424-9300.

**LIMITATION OF WARRANTY AND LIABILITY**

**IMPORTANT: READ BEFORE USE.** Read the entire Directions for Use, Conditions of Warranties and Limitations of Liability before using this product. If these terms and conditions are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following Disclaimer of Warranties and Limitations of Liability.

**CONDITIONS**: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Ineffectiveness, injury, and other unintended consequences may result because of such factors as manner of use or application (including misuse), the presence of other materials, weather conditions, and other unknown factors, all of which are beyond the control of ATTICUS, LLC. All such risks shall be assumed by the user or buyer.

**DISCLAIMER OF WARRANTIES**: To the extent consistent with applicable law, ATTICUS, LLC makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond statements on this label.

**LIMITATIONS OF LIABILITY**:  To the extent consistent with applicable law, neither ATTICUS, LLC the manufacturer, nor the Seller shall be liable for any indirect, special, incidental or consequential damages resulting from the use, handling, application, storage, or disposal of this product. To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use, handling, application, or storage of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid.

**Table 3. Application Regimes**

[A] Mix 4.0 to 8.0 fluid ounces of this product in 100 gallons of water and apply as a full coverage spray to the point of drip. Reapply every 14 to 21 days during the period of primary infection. If disease is present, tank mix with an EPA-registered contact fungicide. For powdery mildew, apply this product when there is 5% to 10% bloom and again at 70% to 100% bloom. For dogwoods, apply the 4.0 to 8.0 fluid ounces rate every 14 days, or apply 16.0 fluid ounces of this product every 28 days.

[B] Mix 10.0 to 16.0 fluid ounces of TALARIS XL in 100 gallons of water and apply as a full coverage spray to the point of drip. Apply as needed, beginning when conditions favor disease development. For blackspot, apply in tank mix with a registered contact fungicide labeled for blackspot. For calendula, apply every 30 days. For diplodia tip blight, make a total of 3 applications every 14 days prior to the major period of infection. For juniper phomopsis blight, make an initial application as soon as junipers start to grow and reapply every 14 to 21 days during the period of active growth.

[C] Mix 16.0 to 24.0 fluid ounces of TALARIS XL in 100 gallons of water and apply as a full coverage spray to the point of drip. Apply every 30 days, beginning when conditions favor disease development. For Douglas fir needle rust, apply once in May. For tip blight, make an initial application in mid- to late-winter, and 3 additional applications at 2-month intervals.

[D] Mix 32.0 fluid ounces of TALARIS XL in 100 gallons of water and apply as a full-coverage spray to the point of drip. Apply every 1 to 28 days beginning when conditions favor disease development. For Douglas fir needle rust, apply once in May. For tip blight, make an initial application in mid- to late-winter, and 3 additional applications at 2-month intervals.

[E] Mix 40.0 to 46.3 fluid ounces of TALARIS XL in 100 gallons of water and apply as a full-coverage spray to the point of drip. Apply within the June to August time period.

**STORAGE AND DISPOSAL (continued)**

---

(continued)
ACTIVE INGREDIENTS: (% by weight)
Thiophanate-methyl*: (dimethyl[(1,2-phenylene)-bis
(iminocarboxonothioyl)]bis(carbamate)] .......................... 23.7%
Propiconazole**: 1-[[2-(2,4-dichlorophenyl)-4-propyl-
1,3-dioxolan-2-yl[methyl]-1H-1,2,4-triazole ........................ 7.1%
OTHER INGREDIENTS: .................................................. 69.2%
TOTAL: ........................................................................ 100.0%

*Contains 2.25 pounds thiophanate-methyl per gallon.
**Contains 0.68 pound propiconazole per gallon.

TOTAL: 2.5 GALLONS

Precautionary Statements
Hazard to Humans and Domestic Animals
CAUTION
Harmful if swallowed. Harmful if inhaled. Harmful if absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing vapor or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

Environmental Hazards
This product is toxic to fish and shrimp. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment, or disposing of equipment wash waters or rinsate. Refer to product labeling for use restrictions to protect endangered species.

Storage and Disposal
Do not contaminate water, food, or feed by storage or disposal.

Storage:
Store in original container in secured dry storage area. Prevent cross-contamination of other pesticides and fertilizers. For minor spills, leaks, etc., follow all precautions indicated on this label and clean up immediately. Take special care to avoid contamination of equipment and facilities during cleanup and disposal of wastes.

Pesticide Disposal:
Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

Container Handling:
Nonrefillable container. Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinsate). After emptying and cleaning, it may be allowable to temporarily hold rinsate or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Once cleaned, agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact the Agricultural Container Recycling Council (ACRC) at www.acrecycle.org. If not recycled, puncture and dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities, by burning.

First Aid:
If swallowed: • Call a poison control center or doctor immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to do so by a poison control center or doctor. • Do not give anything by mouth to an unconscious person.

If inhaled: • Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. • Call a poison control center or doctor for further treatment advice.

If in eyes: • Hold eye open and rinse slowly and gently with water for 15 to 20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center or doctor for treatment advice.

If on skin or clothing: • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15 to 20 minutes. • Call a poison control center or doctor for treatment advice.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact SafetyCall at 1-844-685-9173 for emergency medical treatment information.

For Chemical Emergency: Spill, Leak, Fire, Exposure, or Accident, Call CHEMTREC Day or Night Within USA and Canada: 1-800-424-9300 or +1 703-527-3887 (collect calls accepted)
