FIRST AID (continued)

If inhaled:
• Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
• Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor for treatment advice.

If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

If swallowed:
• Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

ENVIRONMENTAL HAZARDS
For terrestrial uses, do not apply directly to water or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply within 100 feet of lakes, reservoirs, rivers, permanent streams, marshes, natural ponds, estuaries, and commercial fish farm ponds. Do not apply when weather conditions favor drift from treated area. Do not allow spray to drift off of crop, especially when spraying outer rows. Always direct spray into the crop. Do not contaminate water when disposing of equipment washwaters.

IMPORTANT—Read the entire Directions for Use and Disclaimer of Warranties before using this product.
AGRICULTURAL USE REQUIREMENTS (continued)

The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. Hard harvesting of flowers is restricted until 7 days after application. PPE required for early entry to treated areas that are permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water. PPE is:
- Coveralls
- Chemical-resistant gloves made of barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, polyvinyl chloride (PVC), or Viton
- Shoes plus socks

PRODUCT INFORMATION

NOTAVO may be used on ornamental plants (including conifers and nonbearing trees and vines, carnations, chrysanthemums, dieffenbachia, geraniums, impatiens, hydrangeas, potentillas, scheffleras, and roses) in greenhouses, saran and shade houses, outdoor containers, and field grown nursery stock for management of plant-feeding mites.

Achieved. Should inadequate spreading of the NOTAVO spray occur, the addition of a spreader or spreader sticker may be considered. If addition is warranted, trial applications must be followed using the instructions in the section below. NOTICE TO USERS: as phytotoxicity can result from such additions.

When an adjuvant is to be used with this product, GHP, Inc. suggests the use of an adjuvant certified by the Chemical Producers and Distributors Association.

PH Stability/Compatibility with other products:

NOTAVO is extremely stable over a wide range of pH. It has proven to be physically and chemically stable in tank mixes with a wide range of other plant protection products. If tank mixing is planned, evaluate both the physical and chemical (phytotoxicity) compatibility on a selected group of plants prior to full scale use. See NOTICE TO USERS section below.

NOTICE TO USERS

NOTAVO has demonstrated excellent plant safety; however, all species and varieties of ornamental plants have not been tested. If a user wishes to make an application to an ornamental plant not listed on the label but found on a similar use site and for a pest that is listed on the label, it is suggested that a trial application be performed first.

For a trial application, make 2 applications at a 7-day interval, 2 fl. oz. per 100 gal. to 25 or more test plants grown under conditions similar to those under which the plants will be grown full scale. Wait 7 days after second application for final observation.

APPLICATION DIRECTIONS

Mix NOTAVO at a concentration of 2 fl. oz. per 100 gal. when it is used in high-volume sprays applied using hand-held equipment. For low and ultralow-volume applications, apply 4 to 8 fl. oz. of this product per acre. Do not exceed an application rate of 8 fl. oz. of product per acre, irrespective of delivery method.

Direct spray applications to cover all plant surfaces, especially the undersides of leaves. For extended residual control, apply 8 fl. oz. of product per acre. Do not hand-harvest flowers until at least 7 days after application of this product.

CHEMIGATION STATEMENT

Do not apply this product through any type of irrigation system.

RESISTANCE MANAGEMENT

NOTAVO is highly active on mite eggs and early mite stages. It has shown activity and persistence up to 45 days after application. Proper timing of application based on the utilization of scouting may delay or eliminate the need for subsequent applications of other miticides.

MIXING INSTRUCTIONS

Add the appropriate amount of NOTAVO to a partially filled spray tank under agitation. After adding NOTAVO, other tank-mix components (adjuvants, fungicides, and insecticides), if required, may be added along with sufficient water to bring to the proper volume. Maintain agitation.

Tank mixtures are only permitted in States where all of the pesticide products used as tank-mix partners are registered. It is the pesticide user’s responsibility to ensure that all products used in the tank mix are registered for the intended use. Users must follow the most restrictive of all of the labeled use directions, precautionary language, and use limitations for the tank-mix partners.

Adjuvant Addition:

Often addition of adjuvants (stickers, spreaders, spreader-stickers, dormant oils, etc.) will aid in the performance of plant protection products under certain conditions. Generally an adjuvant is not required with NOTAVO where adequate spray coverage is achieved.

NOTAVO is magnetic in color and may leave a residue on light-colored flowers or foliage.

APPLICATION DIRECTIONS

Mix NOTAVO at a concentration of 2 fl. oz. per 100 gal. when it is used in high-volume sprays applied using hand-held equipment. For low and ultralow-volume applications, apply 4 to 8 fl. oz. of this product per acre. Do not exceed an application rate of 8 fl. oz. of product per acre, irrespective of delivery method.
