For the control of woody plants and annual and perennial broadleaf weeds in rangeland and permanent pastures, conservation reserve program (CRP) acres, and non-crop areas including fencerows, non-irrigation ditch banks, roadsides and around farm buildings.

**ACTIVE INGREDIENTS:**
- Picloram: 4-amino-3,5,6-trichloropicolinic acid, triisopropanolamine salt - 13.24%
- Fluroxypyr 1-methylheptyl ester: ((4-amino-3,5-dichloro-6-flouro-2-pyridinyl)oxy)acetic acid, 1-methylheptyl ester - 10.64%

**OTHER INGREDIENTS:** 76.12%
**TOTAL:** 100.00%

Picloram triisopropanolamine salt – 1.19 lbs/gal (0.67 lb ae/gal)
Fluroxypyr 1-methylheptyl ester – 0.96 lb/gal (0.67 lb ae/gal)

Contains petroleum distillates

EPA Reg. No. 81927-64   EPA Est. No. 37429-GA-001; 81927-AL-001

**KEEP OUT OF REACH OF CHILDREN**

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION:** Harmful if swallowed. Causes moderate eye irritation. Avoid contact with eyes or clothing.

**FIRST AID**

- **If swallowed:**
  - Immediately call a poison control center or doctor.
  - Do not induce vomiting unless told to do so by a poison control center or doctor.
  - Do not give any liquid to the person.
  - Do not give anything by mouth to an unconscious person.

- **If in eyes:**
  - Hold eye open and rinse slowly and gently with water for 15-20 minutes.
  - Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
  - Call a poison control center or doctor for treatment advice.

**HOT LINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-424-9300 for emergency medical treatment information.

**NOTE TO PHYSICIAN:** Contains petroleum distillate. Vomiting may cause aspiration pneumonia.

See inside label booklet for additional Precautionary Statements and Directions for Use.

Manufactured for:
Alligare, LLC
13 N. 8th Street
Opelika, AL 36801

EPA 20171120
PERSONAL PROTECTIVE EQUIPMENT (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves (barrier laminate or viton ≥14 mils)
• Shoes plus socks

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. After each day of use, clothing or PPE must not be reused until it has been cleaned.

ENGINEERING CONTROLS
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the WPS (40 CFR 170.240 (d) (4-6)), the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
Fluroxypyr is toxic to fish, and both picloram and fluroxypyr are toxic to some plants at very low concentrations. Non-target aquatic organisms and plants may be adversely affected if this product is allowed to drift from areas of application. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters. Do not contaminate water used for irrigation or domestic purposes by cleaning of equipment or disposal of wastes. Do not allow run-off or spray to contaminate wells, irrigation ditches, or any body of water used for irrigation or domestic purposes. Do not make application when circumstances favor movement from treatment site.

Picloram is known to leach through soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable particularly where the water table is shallow, may result in ground water contamination.

Picloram can contaminate surface water through spray drift. Under some conditions, picloram may also have a high potential for runoff into surface water (primarily via dissolution in runoff water). These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas over-laying extremely shallow ground water, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips and areas over-laying tile drainage systems that drain to surface water.

PHYSICAL OR CHEMICAL HAZARDS
Do not mix or allow this product to come in contact with an oxidizing agent such as potassium permanganate. Hazardous chemical reaction may occur.

DIRECTIONS FOR USE

RESTRICTED USE PESTICIDE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted entry interval (REI). The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
• Coveralls
• Chemical-resistant gloves (barrier laminate or viton ≥14 mils)
• Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for Agricultural Pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Entry Restrictions for Non-WPS Uses: Do not allow worker entry into treated areas until sprays have dried.

Resistance Management Guidelines
• Development of plant populations tolerant to auxiliary growth regulator mode-of-action is usually not a problem on non-cropland sites because these sites receive infrequent pesticide applications.
• Similar looking biotypes of a given weed species occurring in a treated area may vary in their susceptibility to a herbicide. Application of a herbicide below its labeled rate may allow more tolerant weeds to survive and a shift to more tolerant biotypes within the treated area.
• Where identified, spreading of resistant weeds to other fields may be prevented by cleaning harvesting and tillage equipment before moving to other areas and by planting weed-free seed.
• Contact your extension specialist or certified crop consultant for the latest resistance management information.
Product Information
Alligare Triumph® XTR Herbicide is an emulsifiable liquid product containing picloram and fluroxypyr herbicides. Use this product for the control of woody plants and annual and perennial broadleaf weeds in rangeland and permanent grass pastures, conservation reserve program (CRP) acres, and non-cropland areas including fencerows, non-irrigation ditchbanks, roadsides, and around farm buildings. Apply this product broadcast as a foliar spray or using individual plant treatment methods. Alligare Triumph XTR Herbicide provides both knockdown of emerged plants and residual soil activity to newly emerging susceptible plants. The duration of this soil activity depends on the species and the applied rate.

Use Restrictions
- **Maximum Application Rate:** Do not apply more than 3 quarts of this product per acre per year (0.5 lb. ae fluroxypyr + 0.5 lb. ae picloram). When applying this product sequentially with other products containing fluroxypyr and/or picloram, do not apply more than 0.5 lb. ae fluroxypyr per acre per year or more than 0.5 lb. ae per acre picloram per year.
- **Chemigation:** Do not apply this product through any type of irrigation system.

Grass, Forage and Tree Tolerance
- **Established grasses:** are tolerant to this product.
- **Do not use on bentgrass or limo grass (Hemarthria), unless injury or loss of such plants can be tolerated.**
- **Do not use on alfalfa, or other desirable forbs, especially legumes such as clover, unless injury or loss of such plants can be tolerated.**
- **Seeding of some legumes may not be successful if done within one year of application.**
- **Many woody species are susceptible to this product. Trees can be affected by root uptake of the herbicide from surface soil or by excretion of the herbicide from the roots of nearby treated trees. Do not apply this product within the area occupied by roots of desirable trees, unless such injury can be tolerated.**
- **When Reseeding Grasses**
  - When this product is applied before reseeding, do not reseed treated areas for a minimum of three weeks after application.
  - When this product is applied following reseeding, to avoid grass injury, do not apply until grass seedlings are well established as indicated by tillering (usually after 4 true leaves have emerged) development of a secondary root system and vigorous growth.
- **Sprigged bermudagrass:** Do not apply this product until runners (stolons) have reached at least 6 inches in length. Apply only during favorable growing conditions.
- **Grasses Grown for Seed:** Do not use from early boot to milk stage if grass is being grown for seed production.

Crop Rotation
- **Within 12 months of application, do not rotate to crops other than the following:** range or pasture grasses, grasses for hay or silage, barley, oats, wheat or grain sorghum. Thereafter, other crops may be planted on treated land after an adequately sensitive bioassay shows that the risk of crop injury is within acceptable limits.

Grazing and Haying Restrictions
- **Grazing or harvesting green forage**
  1) **Lactating dairy animals:** Do not allow lactating dairy animals to graze treated areas and do not harvest forage for consumption by lactating dairy animals within 14 days after application.
  2) **Other Livestock:** There are no grazing restrictions for non-lactating dairy animals or other livestock including horses, sheep, goats, and other animals in the treatment area.
- **Haying (harvesting of dried forage):** Do not harvest hay within 7 days after application.
  - **Slaughter Restrictions:** Withdraw livestock from grazing treated grass or consumption of treated hay at least 3 days before slaughter. This restriction is applicable to grazing or hay harvested from treated areas during the same growing season following application.

Residues in Mulch, Manure and Soil
- **Do not transfer livestock from treated grazing areas onto broadleaf crop areas without first allowing 7 days of grazing on untreated grass pasture. Otherwise, urine and/or manure from grazing animals may contain enough picloram to cause injury to sensitive broadleaf plants.**
- **Do not move treated soil, or use treated soil for growing other plants until soil residues of picloram are no longer detectable as indicated by an adequately sensitive bioassay or chemical test.**
- **Do not use grass or hay from treated areas or manure from animals being fed treated forage or hay for composting or mulching of desirable, susceptible broadleaf plants.**

Other Precautions and Restrictions
- **Grazing of Areas Known to Contain Poisonous Plants:** Herbicide application may increase the palatability of certain plants that are poisonous to livestock. Defer grazing in treated areas until such plants are dry and no longer attractive to livestock.
- **Do not mix or apply this product with dry fertilizer.**
- **Do not apply this product to areas that are sub-irrigated by a shallow water table.**
- **Do not apply directly to the banks of ditches used for irrigation or composting or manuring of desirable, susceptible broadleaf plants.**

Avoiding Spray Drift and Run-Off to Surface Water or Adjacent Land
This product must be used strictly in accordance with the run-off and drift precautions on this label in order to minimize off-site exposure and potential effects on aquatic organisms and non-target plants.
- **Avoiding Runoff:** Under certain conditions, this product may have a potential to run-off to surface water or adjacent land. Use vegetation filter strips or treatment setbacks along rivers, creeks, streams, wetlands, etc. or on the downhill side of treated areas where run-off could occur to minimize water runoff.
- **Do not contaminate water intended for irrigation or domestic purposes. To avoid injury to crops or other desirable plants, do not treat or allow spray drift or runoff to fall onto banks or bottoms of irrigation ditches, either dry or containing water, or other channels that carry water that may be used for irrigation or domestic purposes. Do not apply to snow or frozen ground. In particular, do not make applications of this product to areas where surface runoff following rainfall events soon after application would flow directly into ponds used for irrigation of sensitive broadleaf crops such as tobacco or vegetables. In such situations, apply this product before the sensitive crop is planted or after it is harvested.
\begin{itemize}
\item Do not use manure from animals grazing treated areas on land used for growing broadleaf crops, ornamentals, orchards, or other susceptible, desirable plants. Manure may contain enough picloram to cause injury to susceptible plants.
\item This product cannot be applied in residential areas or near vegetables, fruit production, or ornamental trees and shrubs. Untreated plants may be affected by root uptake of the herbicide following movement into the topsoil or excretion of the herbicide from the roots of nearby treated plants. Do not apply this product within the area occupied by roots of desirable plants, unless such injury can be tolerated.
\end{itemize}

Spray Drift: Spray drift produced during application is the responsibility of the applicator and care should be taken to minimize off-target movement of spray during application. A drift control agent suitable for agricultural use may be used with this product to aid in reducing spray drift, but the first choice should be a coarser spray category nozzle setup. If used, follow all use directions and precautions on the manufacturer’s label.

Do not apply where drift may be a problem due to proximity to susceptible crops or other desirable broadleaf plants. Do not apply or otherwise permit this product or sprays containing this product to contact crops or other desirable broadleaf plants, including but not limited to alfalfa, beans, cotton, grapes, melons, peas, potatoes, safflower, soybeans, sugar beets, sunflower, tobacco, tomatoes and other vegetable crops, flowers, fruit trees, ornamentals, shade trees or other susceptible broadleaf plants. Do not permit spray mist or drift containing this product to contact susceptible plants because even very small quantities of the spray, that may not be visible, can cause severe injury during either active or dormant periods. Do not use in or around greenhouses.

Ground Application: To minimize spray drift, apply this product in a total spray volume of 5 or more gallons per acre using spray equipment designed to produce coarse or larger droplets per ASAE S-572 standard. Refer to the spray equipment manufacturer’s recommendations for detailed information on nozzle types, arrangement, spacing and operating height and pressure. Make spot treatments with a calibrated boom to prevent over application. Operate equipment at spray pressures no greater than is necessary to produce a uniform spray pattern. Operate the spray boom no higher than is necessary to produce a uniformly overlapping pattern between spray nozzles. Do not apply with hollow cone-type insecticide nozzles or other nozzles that produce a fine-droplet spray.

Aerial Application

Non-Cropland Areas, Including Rights-of-Way (Helicopter Only): In non-cropland, do not apply this product with fixed-wing aircraft.

Rangeland and Permanent Pastures: Both fixed wing and helicopter equipment may be used to apply this product on rangeland, permanent pastures and pine plantations, but fixed wing aircraft require additional drift mitigation measures.

To minimize spray drift, apply this product in a total spray volume of 3 or more gallons per acre using spray. Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type, determine drift potential at any given speed. Do not make applications when wind speed is below 2 mph due to variable wind direction and high potential for temperature inversion. Spray drift from aerial application can be minimized by applying a coarse spray as per USDA-ARS/PAASS or nozzle manufacturer’s guidelines or by using straight-stream nozzles directed straight back. For fixed wing aircraft, maximum speed during application is limited to 140 mph and application height above the vegetation canopy should not exceed 10 ft.

Do not store or handle other agricultural chemicals with the same containers used for this product. Do not apply other agricultural chemicals or pesticides with equipment used to apply this product unless equipment has been thoroughly cleaned.

Spray Drift Management (Aerial Application)

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions. The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops.

1. The distance of the outer most nozzles on the boom must not exceed 75% the length of wing span or 75% of rotary width.
2. Nozzles must always point backward parallel with the airstream and never be pointed downwards more than 45 degrees.

Where states have more stringent regulations, they must be observed.

The applicator should be familiar with and take into account the information covered in the following Aerial Drift Information section.

Aerial Spray Drift Information

Importance of Droplet Size: The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see Wind, Temperature and Humidity and Temperature Inversion sections of this label).

Controlling Droplet Size:

- Volume – Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure – Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types, lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of Nozzles – Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation – Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type – Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.
• **Boom Length** – For some use patterns, reducing the effective boom length to less than 65% of the wingspan or rotor length may further reduce drift without significantly reducing swath width.

• **Application** – Do not make applications at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

**Swath Adjustment:** When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

**Wind:** Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided below 2 mph due to variable wind direction and high inversion potential. **Note:** Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

**Temperature and Humidity:** When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

**Temperature Inversions:** Do not make applications during a local temperature inversion, because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small, suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that moves and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upwards and rapidly dissipates indicates good vertical air mixing.

**Sensitive Areas:** Only apply this product when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

<th>Woody Plant Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only apply this product when conditions are favorable for active growth, but only after leaves are fully expanded and terminal growth has slowed. Application to immature foliage during periods of rapid terminal growth will result in rapid defoliation, but translocation of the herbicide and woody plant control may be reduced. If brush has been mowed, best results are obtained when at least 9-12 months of regrowth following mowing is allowed before herbicide application (observe 12 months in areas where growth conditions such as low rainfall have limited brush regrowth following mowing). Adequate soil moisture before and after treatment as well as healthy foliage at the time of application is important for optimal effectiveness. This product will control only broadleaf plants that are emerged at the time of application and may also suppress or control emerging seedlings.</td>
</tr>
</tbody>
</table>

Apply at the specified rate (3 - 6 pints per acre, unless otherwise specified) in 5 or more gallons of water per acre by air or 10 or more gallons per acre by ground equipment. Use higher spray volumes to ensure adequate foliar coverage where brush canopy is dense. If applied in tank mix, follow applicable use directions, precautions and limitations on the respective labels (see instructions for tank mixing under Mixing Directions). The optimal rate of this product will depend on brush size as well as the species. For smaller brush (less than about 6 feet tall), 3-4 pints/acre will be sufficient. For larger brush and mixed brush canopies, apply 4-6 pints/acre.

**Use of Surfactant:** A nonionic surfactant or liquid fertilizer at 1-2 quarts per 100 gallons spray solution (0.25% - 0.5% v/v) may improve woody plant control either broadcast or spot application, especially if plants are drought-stressed. To minimize spray drift, use a drift control and deposition aid cleared for application to growing crops.

<td>1 to 2 gallons of this product/100 gallons of spray (1-2 % v/v) plus 1 to 2 quarts of non-ionic surfactant.</td>
</tr>
</tbody>
</table>

Specific Use Directions

Information for Woody Plant Control: Optimum timing period is late spring after leaves are fully expanded and terminal growth has slowed through early fall. Application to immature foliage during periods of rapid terminal growth will result in rapid defoliation, but translocation of the herbicide and woody plant control may be reduced. Adequate soil moisture before and after treatment as well as healthy foliage (not reduced by insect or storm damage) at the time of application is important for optimal effectiveness. Avoid application during cold weather. Make applications when daily maximum air temperature has exceeded 50°F for three consecutive days.

For control of brush regrowth, apply only after regrowth is at least 4 ft. tall to ensure adequate foliage for herbicide absorption. Follow instructions for Information for Woody Plant Control above.

Application: Apply with a backpack or power sprayer using sufficient spray pressure to provide uniform plant coverage without forming a mist and direct spray no higher than tops of target woody plants. Use sufficient spray volume to uniformly wet all leaves, stems, and root collars (pad surfaces and stems in the case of prickly pear or other cactus) but avoid runoff. To minimize spray drift, use a drift control additive approved for growing crops. A dye marker may be added to the spray mixture as a means of marking treated plants.

Use of a non-ionic surfactant at the specified rate (usually 0.25% to 0.5% v/v) may improve herbicidal efficacy.

Control of Specific Woody Plants or Cactus

Chinese tallowtree: Best results may be expected on trees under 8 feet tall. Use 0.5% to 1% (volume/volume) spray solution of this product. Spray between July and September, before leaves have begun to turn yellow. Wet all leaves thoroughly, especially the terminal buds of each branch. Avoid treatment when leaves are wet or during periods of rapid new growth.

Huisache: Use a 1.0% v/v solution in water. Fall application works best. Wet all leaves thoroughly especially the terminal buds of each branch. Avoid spray when leaves are wet or during periods of rapid new growth.

Locust (black or honey): Use a 0.5% to 1.0% v/v solution of this product in water. Apply in spring, when leaves are mature.

Prickly Pear: Use a 0.5% to 1.0% v/v solution of this product in water. Use a coarse droplet size applied with an adjustable cone nozzle. Application may be made any time of year, but fall application may be most effective. Treatment effects are slow to appear and total plant kill may require 2 to 3 years. Do not spray when the plants are wet. Mechanical injury such as bruising or puncturing of the prickly pear pad surfaces may speed up and improve control.

Macartney rose: Use a 0.5% to 1.0% v/v solution of this product in water. Delay treatment for 9-12 months after mowing. Apply in spring or fall to Macartney rose plants greater than 3 feet tall.

Multiflora rose: Use a 1% to 1.5% v/v solution of this product in water. Apply from budding through flowering. Delay treatment for 9-12 months after mowing.
**Maximum Use Rate:** For individual plant treatment with high-volume foliar sprays, do not apply more than 3 pints of this product per acre per year. This is equivalent to 37 gallons of total spray mixture per acre at the 1 gallon Alligare Triumph XTR Herbicide/100 gallons rate or 18.5 gallons of total spray mixture per acre at the 2 gallons Alligare Triumph XTR Herbicide/100 gallons rate.

### Broadleaf Weed Control

For best results, use 1.5 pts./acre and apply when weeds are small and actively growing, but before bud stage of growth. Use 2 pts./acre when weed density is high, weed growth is mature, or conditions for plant growth are less than optimum.

- knotweed
- kochia (3)
lambsquarters, common
- lespedeza, sericea (4)

Numbers in parentheses (-) refer to specific use directions.

### Specific Use Directions:

1. **Horehound, Carolina:** Apply 1.5 to 2 pints/acre after emergence, during active growth before flowering.
2. **Ironweed, western:** Apply at the rate of 2 – 2.5 pints per acre to fully emerged ironweed that is actively growing.
3. **Kochia:** Apply at the rate of 2 – 2.5 pints per acre when kochia is less than 18 inches tall.
4. **Lespedeza, sericea:** For best results, apply at the rate of 2 pints per acre in late spring to early summer after maximum foliage development, when plants are 12 – 15 inches tall, but prior to bloom stage. Increase rate to 2.5 pints per acre for dense stands or later stages of growth.
5. **Thistle, musk and plumeless (Spring Application):** Apply 1.5 to 2 pints/acre at rosette to early bolting stage. **Fall Application:** Apply 2 to 2.5 pints/acre after emergence while active growth continues. (Fall application will provide some residual control into the following spring).

### Application to Small Areas

Treatments may be applied with a calibrated boom or with hand-held sprayers according to directions provided below.

### Hand-Held Sprayers

Hand-held sprayers may be used for applications to small areas where use of a power operated boom sprayer is not practical. Take care to apply the spray uniformly and at a rate equivalent to a broadcast application. Application rates in the table are based on a treatment area of 1,000 sq ft. Mix the amount of this product (fl. oz. or ml) corresponding to the specified broadcast rate in the spray volume needed to cover 1,000 sq. ft. To calculate the amount of this product required for larger areas, multiply the table value (fl. oz. or ml) by the number of thousands of sq. ft. of area to be treated. An area of 1,000 sq. ft. is approximately 10.5 X 10.5 yards (strides) in size.

### Rate Conversion Table for Small Area Treatment

Conversion factors: 1 pt. = 16 fl. oz.; 1 fl. oz. = 29.6 (30) ml
Directions Specific to CRP Acres
Specific Use Directions
Refer to application rate for the specific method and target weed or woody plant species to be controlled. For program lands such as CRP, consult program rules to determine whether grass or hay may be used. The more restrictive requirements of the program rules or this label must be followed. Use this product on CRP acres only after perennial grasses are well established.

Restrictions: When applying to CRP lands, follow all applicable state and federal regulations. Follow the most severe grazing restriction imposed by the pesticide label or by the USDA Acreage Conservation Reserve Program. After that time period, follow local (CRP) guidelines regarding cropping and haying restrictions. Do not use this product if damage or loss of existing legumes or other desirable broadleaf plants cannot be tolerated.

Mixing Directions
This product may be foliar applied by diluting with water or by preparing an oil-water emulsion. For woody plant control, an oil-water emulsion will perform more dependably under a broader range of conditions than mixing with water alone and is especially recommended for aerial applications.

Ground Application: Add oil to the spray mix at a rate of 5 to 10% of the total mix, up to a maximum of 1 gallon of oil per acre, using agricultural spray emulsifiers according to mixing instructions below.

Aerial Application: Use oil and water in the spray mixture in a 1.5 ratio (1 part oil to 5 parts water); up to a maximum of 1 gallon of oil per acre according to mixing instructions below.

Dilution with Water: For water dilutions, use of an agricultural surfactant at a minimum of 0.25% (1 quart per 100 gallons) of the total spray mix volume may be added to the spray mixture to improve wetting of foliage. Use a drift control and deposition aid cleared for application to growing crops to minimize spray drift.

Oil Water Emulsion: An oil-water emulsion may be prepared using diesel fuel, fuel oil, or kerosene plus an emulsifier such as Sponto 712 or Triton X-100. Follow mixing instructions on the label for the emulsifier. To avoid mixing compatibility problems, use the jar test described below to verify the compatibility of the spray mixture.

Tank Mixing
Apply this product in tank mix combination with labeled rates of other herbicides provided (1) the tank mix product is labeled for the timing and method of application for the use site to be treated, and (2) tank mixing is not prohibited by the label of the tank mix product.

Tank Mixing Precautions:
• Read carefully and follow all applicable use directions, precautions, and limitations on the respective product labels.
• Do not exceed labeled application rates. If products containing the same active ingredient are tank mixed, do not exceed the maximum allowable active ingredient use rates.
• For direct injection or other spray equipment where the product formulations will be mixed in undiluted form, ensure tank mix compatibility.
• Always perform a (jar) test to ensure the compatibility of products to be used in tank mixture.

Tank Mix Compatibility Testing: Conduct a jar test prior to tank mixing to ensure compatibility of this product and other herbicides or spray carriers. Use a clear glass quart jar with lid and mix the tank mix ingredients in their relative proportions. Invert the jar containing the mixture several times and observe the mixture for approximately 1/2 hour. If the mixture balls-up, forms flakes, sludges, jels, oily films or layers, or other precipitates, it is not compatible and do not use the tank mix combination.

Mixing Order
1. Add half the needed water to the mixing tank and start agitation.
2. Add water soluble herbicide (if used).
3. Prepare a premix of oil, emulsifier (if oil-water emulsion), and this product plus other oil soluble herbicide (if used), e.g., 2,4-D ester. Continue agitation and add premix to the spray tank. Note: Do not allow water or mixtures containing water to get into the premix or Alligare Triumph XTR Herbicide since a thick, invert (water in oil) emulsion may be formed that will be difficult to break. Such an emulsion may also be formed if the premix or this product is put in the mixing tank before the addition of water.
4. Add the remaining water. Also during final filling of the tank add a drift control and deposition aid cleared for application to growing crops (if used), plus an agricultural surfactant (if a water dilution rather than an oil-water emulsion spray is used).

Continuous agitation of the spray mixture during both mixing and application is necessary to ensure spray uniformity.

Mixing with Liquid Fertilizer for Broadleaf Weed Control
This product may be combined with liquid nitrogen fertilizer suitable for foliar application to accomplish weed control and fertilization of grass pastures in one operation. Use this product in accordance with instructions for weed control in grass pastures as given on this label. Use liquid fertilizer at rates provided by supplier or Extension Service Specialist. Note: This product is not labeled for use with liquid fertilizer on woody plants (brush). Foliage burn caused by liquid fertilizer may reduce herbicide effectiveness on woody plants.

Compatibility with Liquid Fertilizer: Prior to mixing in spray tank, conduct a jar test for spray mixture compatibility by mixing each component in the required order and proportion in a clear glass jar. See procedure for Tank Mixing Compatibility Testing above. A compatibility aid such as Unite or Compex may be needed in some situations. Compatibility is best with straight liquid nitrogen fertilizer solutions. Mixing with N-P-K solutions or suspensions may not be satisfactory even with the addition of compatibility aid. Premixing this product with 1 to 4 parts water may help in difficult situations.

Fill the spray tank about half-full with the liquid fertilizer, then add the herbicide with agitation and complete filling the tank with fertilizer. Apply immediately and continue agitation in the spray tank during application.

Restrictions:
• Do not store liquid fertilizer spray mixtures.
• Do not use broadcast spray equipment used for application of Alligare Triumph XTR Herbicide for other applications to susceptible crops or desirable plants, or land planted to such plants, unless it has been determined that all herbicide residues have been removed by thorough cleaning of the equipment.
Precaution:
- Application with liquid fertilizer during very cold weather (near freezing) is not advisable. The likelihood of mixing or compatibility problems with liquid fertilizer increases under cold conditions.

Cleaning Instructions for Spray Equipment
To avoid injury to desirable plants, thoroughly clean equipment used to apply this product before reusing to apply any other chemicals.
1. Rinse and flush application equipment thoroughly after use.
   - Flush the entire system at least three times with water and dispose of rinse water in non-cropland area away from water supplies.
2. During the second rinse, add 1 qt. of household ammonia for every 25 gallons of water. Circulate the solution through the entire system so that all internal surfaces are contacted (15 to 20 min.). Let the solution stand for several hours, preferably overnight.
3. Flush the solution out the spray tank through the boom.
4. Rinse the system twice with clean water, recirculating and draining each time.
5. Remove nozzles and screens separately.

Pressure rinse as follows: Empty the remaining contents into application equipment or mix tank. Hold container upside down over application equipment or a mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

CONDITION OF SALE AND LIMITATION OF WARRANTY AND LIABILITY
To the extent consistent with applicable law, upon purchase or use of this product, purchaser and user agree to the following terms:

Warranty: Alligare, LLC (the Company) warrants that this product conforms to the chemical description on the label in all material respects and is reasonably fit for the purpose referred to in the directions for use, subject to the exceptions noted below, which are beyond the Company’s control. To the extent consistent with applicable law, the Company makes no other representation or warranty, express or implied, concerning the product, including no implied warranty of merchantability or fitness for a particular purpose. To the extent consistent with applicable law, no such warranty shall be implied by law, and no agent or representative is authorized to make any such warranty on the Company’s behalf.

Terms of Sale: The Company’s directions for use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, and the manner of use or application (including failure to adhere to label directions), all of which are beyond the Company’s control. To the extent consistent with applicable law, all such risks are assumed by the user.

Limitation of Liability: To the extent consistent with applicable law, the exclusive remedy against the Company for any cause of action relating to the handling or use of this product is a claim for damages, and in no event shall damages or any other recovery of any kind exceed the price of the product which caused the alleged loss, damage, injury or other claim. To the extent consistent with applicable law, under no circumstances shall the Company be liable for any special, indirect, incidental or consequential damages of any kind, including loss of profits or income. Some states do not allow the exclusion or limitation of incidental or consequential damages.

The Company and the seller offer this product, and the purchaser and user accept this product, subject to the foregoing warranty, terms of sale and limitation of liability, which may be varied or modified only by an agreement in writing signed on behalf of the Company by an authorized representative.

RESTRICTED USE PESTICIDE
May Injure (Phytotoxic) Susceptible Non-Target Plants. For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator’s certification. Commercial certified applicators must also ensure that all persons involved in these activities are informed of the precautionary statements.

ALLIGARE
TRIUMPH® XTR
HERBICIDE

For the control of woody plants and annual and perennial broadleaf weeds in rangeland and permanent pastures, conservation reserve program (CRP) acres, and non-crop areas including fencerows, non-irrigation ditch banks, roadsides and around farm buildings.

ACTIVE INGREDIENTS:
Picloram: 4-amino-3,5,6-trichloropicolinic acid, triisopropanolamine salt. ............................................. 13.24%
Fluroxypyr 1-methylheptyl ester: ((4-amino-3,5-dichloro-6-flouro-2-pyridinyl)oxy) acetic acid, 1-methylheptyl ester ...... 10.64%
OTHER INGREDIENTS: .................................................. 76.12%
TOTAL: .......................................................... 100.00%
Picloram triisopropanolamine salt – 1.19 lbs/gal (0.67 lb ae/gal)
Fluroxypyr 1-methylheptyl ester – 0.96 lb/gal (0.67 lb ae/gal)
Contains petroleum distillates

EPA Reg. No. 81927-64  EPA Est. No. 37429-GA-001™; 81927-AL-001™
Letter(s) in lot number correspond(s) to superscript in EPA Est. No.

KEEP OUT OF REACH OF CHILDREN
CAUTION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

FIRST AID
If swallowed: Immediately call a poison control center or doctor. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give any liquid to the person. Do not give anything by mouth to an unconscious person.

If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-424-9300 for emergency medical treatment information.

NOTE TO PHYSICIAN: Contains petroleum distillate. Vomiting may cause aspiration pneumonia.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION: Harmful if swallowed. Causes moderate eye irritation. Avoid contact with eyes or clothing.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.
PESTICIDE STORAGE: If exposed to subfreezing temperatures (below 32°F) warm the product to at least 40°F and agitated thoroughly before using.
PESTICIDE DISPOSAL: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law and may contaminate groundwater. If these wastes cannot be disposed of by use according to label instructions, contact your state pesticide or environmental control agency, or the hazardous waste representative at the nearest EPA regional office for guidance.

CONTAINER HANDLING:
NONREFILLABLE CONTAINERS:
(Nonrefillable container ≤ 5 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Pour rinsate into application equipment or a mix tank. Hold container upside down over application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.
(Nonrefillable > 5 gallons): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse or pressure rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank. Hold container upside down over application equipment or a mix tank or collect rinsate for later use or disposal. Insert pressure rinsing nozzle in the side of the container, and rinse at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

STORAGE AND DISPOSAL
