Pond-Klear™
Aquatic Herbicide

• For the Management of Undesirable Aquatic Vegetation in Slow Moving Waters.
• Controls nuisance watermeal and duckweed.

ACTIVE INGREDIENT:
Flumioxazin* . . . . . . . . . . . . . . . . . . . . . . . 44.0%

OTHER INGREDIENTS: . . . . . . . . . . 56.0%

TOTAL . . . . . . . . . . . . . . . . . . . . . . . . . . . 100.0%

*2-[7-fluoro-3,4-dihydro-3-oxo-4-(2-propynyl)-2H-1,4-benzoxazin-6-yl]-4,5,6,7-tetrahydro-1H-isoindole-1,3(2H)-dione
Contains 4 pounds flumioxazin per gallon.

KEEP OUT OF REACH OF CHILDREN

CAUTION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)
Read all Precautionary and First Aid Statements inside booklet before use.

FIRST AID

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 – 20 minutes. IF IN EYES: Hold eye open and rinse slowly and gently with water for 15 – 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

IN CASE OF EMERGENCY CALL: 1-800-654-6911

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if inhaled or absorbed through the skin. Causes moderate eye irritation. Avoid breathing spray mist. Avoid contact with skin, eyes or clothing.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Mixers, loaders, applicators, and other handlers must wear long-sleeved shirt and long pants, shoes and socks and waterproof gloves.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS

Users Should:
- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Pond-Klear is a trademark of Lonza or its affiliates.
ENVIRONMENTAL HAZARDS

This product can be toxic to non-target plants and aquatic invertebrates. Do not apply to water except as specified on the label. Drain and runoff may be hazardous to non-target plants and aquatic organisms in neighboring areas. Do not use in accordance to label directions. Do not apply when runoff is likely to occur. Do not apply when water quality is affected by drift from treated areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

Treatment of aquatic weeds and algae can result in oxygen loss from decomposition of dead algae and weeds. This oxygen loss can cause fish and invertebrate suffocation. To minimize hazard, do not treat more than 1/2 of the water body to avoid depletion of oxygen due to decaying vegetation. Wait at least 10 to 14 days between treatments. Begin treatment along the shore and proceed outwards in bands to allow fish to move into untreated areas.

This pesticide is toxic to plants and should be used strictly in accordance with the drift and runoff precautions on this label in order to minimize off-site exposures.

Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARDS

Do not mix or allow coming in contact with oxidizing agent. Hazardous chemical reaction may occur.

PRODUCT INFORMATION

PondKlear™ Aquatic Herbicide is a fast acting contact herbicide for use in Quiescent or slowly moving bodies of water, Canals, Drainage ditches, Lakes, Reservoirs, Marshes, Golf Course, and Ponds. This product controls selected submerged, emergent, and floating aquatic weeds. It is most effective when applied to young, actively growing weeds in water with a pH of less than 8.5. Waters treated with this product may be used for swimming, fishing, animal consumption or further potable water treatment.

APPLICATION RESTRICTIONS

Do not apply to intertidal or estuarine areas.

In areas with dense weed vegetation only treat 1/2 the water body at one time and wait 15-14 days before treating the remaining area. Do not apply in the same section of water within 28 days of initial application.

Treated water may not be used for irrigation purposes on food crops until at least five (5) days after application.

Do not use in water utilized for crawfish farming.

Do not re-treat the same section of water with this product more than 6 times per year.

Do not exceed 400 pts of this product (Rumex- azin) during any one application.

APPLICATION INFORMATION

There is no post-application holding restriction against use of treated water for drinking or recrea- tional purposes (e.g. swimming, fishing).

Treated water may be used for irrigation purposes on turf and landscape ornaments as outlined in the Irrigation Restrictions Following Application table.

Table 1. Irrigation Restrictions Following Application

SPRAY DRIFT MANAGEMENT

Avoid spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all these factors when making decisions.

- Do not spray this product under circumstances where wind, spray droplets may drift to unprotected persons, or points of food, forage or crops that might be dam- aged, or rendered unfit for sale, use or consumption.

- These precautions are not applicable for subsurface injection by closed systems.

- Make ground or watercraft-based surface applications when wind velocity favors on-target product deposition. Apply only when the wind speed is less than, or equal to 10 mph.

- Do not make ground applications into areas of temperature inversions. Inversions are charac- terized by stable air and increasing temperatures with increasing distance above the ground. Mist or fog may indicate the presence of an inversion in humid areas. Where permissible by local regu- lations, the applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

- Low humidity and high temperatures increase the evaporation rate of spray droplets, and therefore the likelihood of increased spray drift assumes and by avoiding excessive spray boom pressure. For ground boom applications, use medium or coarser spray nozzles according to ASAE 572 definition for standard nozzles or a volume mean diameter (VMD) of 300 microns or greater for spraying atomizer nozzles.

- Keep humidity or high temperatures increase the evaporation rate of spray droplets, and therefore the likelihood of increased spray drift if the spray boom pressure is less than 1000 psi.

- Do not apply when weather conditions favor drift. Only protected handlers may be in the area during spraying during conditions of low humidity and/or high temperatures.

- Use the largest droplet size consistent with acceptable efficacy. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible and by avoiding excessive spray boom pressure. For ground boom applications, use medium or coarser spray nozzles according to ASAE 572 definition for standard nozzles or a volume mean diameter (VMD) of 300 microns or greater for spraying atomizer nozzles.

- Do not spray this product under circumstances where wind, spray droplets may drift to unprotected persons, or points of food, forage or crops that might be dam- aged, or rendered unfit for sale, use or consumption.

- These precautions are not applicable for subsurface injection by closed systems.

- Make ground or watercraft-based surface applications when wind velocity favors on-target product deposition. Apply only when the wind speed is less than, or equal to 10 mph.

- Do not make ground applications into areas of temperature inversions. Inversions are charac- terized by stable air and increasing temperatures with increasing distance above the ground. Mist or fog may indicate the presence of an inversion in humid areas. Where permissible by local regu- lations, the applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

- Low humidity and high temperatures increase the evaporation rate of spray droplets, and therefore the likelihood of increased spray drift assumes and by avoiding excessive spray boom pressure. For ground boom applications, use medium or coarser spray nozzles according to ASAE 572 definition for standard nozzles or a volume mean diameter (VMD) of 300 microns or greater for spraying atomizer nozzles.
**PRODUCT INFORMATION**

**PondKlear™** Aquatic Herbicide is a fast acting contact herbicide for use in Quiescent or slow moving bodies of water, Canals, Drainage ditches, Lakes, Reservoirs, Marshes, Golf Course, and Ponds. This product controls selected submerged, emergent, and floating aquatic weeds. It is most effective when applied to young, actively growing weeds in water with a pH of less than 8.5. Waters treated with this product may be used for swimming, fishing, animal consumption or further potable water treatment.

**APPLICATION INFORMATION**

**Do not exceed 400 ppb of this product (flumioxazin) during any one application.**

**APPLICATION RESTRICTIONS**

- Do not apply to intertidal or estuarine areas.
- In areas with dense weed vegetation only treat 1/2 the water body at one time and wait 10-14 days before treating the remaining area. Do not re-treat the same section of water within 26 days of initial application.
- Treated water may not be used for irrigation purposes on food crops until at least five (5) days after application.
- Do not use in water utilized for crawfish farming.
- Do not re-treat the same section of water with this product more than 6 times per year.

**APPLICATION INFORMATION**

- No control of nutrients when spraying waterfowl feeding areas.

**SPRAY DRIFT MANAGEMENT**

Spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all these factors when making decisions.

**Do not spray this product under circumstances where spray droplets may drift on to unprotected persons, or plantings of food, forage, or crops that might be damaged, or rendered unfit for sale, use or consumption.**

These precautions are not applicable for subsurface injection by closed systems.

- Do not apply to intertidal or estuarine areas.
- For ground applications when wind velocity favors on-target purposes on food crops until at least five (5) days after application.
- Do not exceed 400 ppb of this product (flumioxazin) during any one application.

**SPRAY DRIFT MANAGEMENT**

Spray drift at the application site is the responsibility of the applicator. The interaction of many equipment and weather-related factors determines the potential for spray drift. The applicator is responsible for considering all these factors when making decisions.

**Do not spray this product under circumstances where spray droplets may drift on to unprotected persons, or plantings of food, forage, or crops that might be damaged, or rendered unfit for sale, use or consumption.**

These precautions are not applicable for subsurface injection by closed systems.

- Do not apply to intertidal or estuarine areas.
- For ground applications when wind velocity favors on-target purposes on food crops until at least five (5) days after application.
- Do not exceed 400 ppb of this product (flumioxazin) during any one application.
HELPFUL HINTS
• When making solution, use dilution water having a pH of 5 to 7.
• Apply in early morning to actively growing weeds and early in the season.
• This product is a contact herbicide that quickly degrades in the water column.
• This product is rapidly absorbed by target plants, but also breaks down quickly in water with a pH greater than 8.5. The pH of water surrounding mats of submerged vegetation can exceed 8.5 by early to mid-day, due to photosynthetic processes. Application of this product under these conditions may provide only partial weed control, and regrowth is likely.
• Clean spray equipment by flushing with clean water immediately after treatment.

TANK MIXES
This product may be tank mixed with 2,4-D, glyphosate, or copper algicides for enhanced control. Mix and apply immediately. It is the pesticide users' responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. Contact Applied Biochemists for more information, 1-800-558-5106.

ADDITIONS
When applying this product to the foliage of floating or emerged aquatic weeds, mix with an adjuvant approved for use in aquatic sites. Mix this product with a non-ionic surfactant containing at least 80% active ingredient. Follow adjuvant manufacturer’s labeling. Verify mixing compatibility by a jar test before using.

JAR TEST TO DETERMINE COMPATIBILITY OF ADJUVANTS AND THIS PRODUCT
Perform a jar test before mixing commercial quantities of this product, when using this product for the first time, when using new adjuvants or when a new water source is being used.

1. Add 1 pint of the water to a quart jar. Use water from the same source and temperature as which will be used in the spray tank mixing operation.
2. Add 1 milliliter of this product to the quart jar for every 1 ft. oz. of this product per acre being applied (4 ml if 12 oz. per acre is the desired rate of this product), gently mix until product goes into suspension.
3. Add 1 milliliter of non-ionic surfactant, gently mix.
4. Place cap on jar, invert 10 times, let stand for 15 minutes, evaluate.
5. An ideal tank mix combination will be uniform. If any of the following conditions are observed question the choice of adjuvant:
   a) Layer of oil or globules on the mixture’s surface.
   b) Flocculation: fine particles in suspension or as a layer on the bottom of the jar.
   c) Clabbering: Thickening texture (coagulated) like gelatin.

Sprayer Cleanup
If spray equipment is dedicated to application of aquatic herbicides, the following steps are to clean the spray equipment:

1. Completely drain the spray tank and rinse the application equipment thoroughly, including the inside and outside of the tank and all in-line screens.
2. Fill the tank with clean water and flush all hoses, booms, screens and nozzles.
3. Top-off tank with clean water.
4. Circulate through sprayer for 5 minutes.
5. Then flush all hoses, booms, screens and nozzles for a minimum of 15 minutes.
6. Drain tank completely.
7. Remove all nozzles and screens and rinse them with clean water.

FLOATING AND EMERGED WEEDS USING SURFACE APPLICATION
1. Determine the dimensions of the intended treatment area using the appropriate formula below: Square pond: average length (ft.) x average width (ft.) = 0.5 acre
   Oval pond: average length (ft.) x average width (ft.) = 0.5 acre
   Circle pond: average diameter (ft.) = 0.25 acre
   Rectangular pond: average length (ft.) x average width (ft.) x 0.6 = 0.16 acre
   Long pond: average length (ft.) x average width (ft.) = 0.1 acre

2. Dilute 1.5 ft. oz. of PondKlear™ Aquatic Herbicide in 4 gallons of water per ½ acre.
3. Apply as a broadcast spray with a backpack or handgun sprayer directly to the foliage of actively growing weeds. This product will control the following species: Alligator Weed (Alternanthera philoxeroides), Duckweed (Lemma spp.), Frogs-bit (Limnobium spongia), Mosquito Fern (Azolla spp.), Salvinia (Salvinia spp.), Water Lettuce (Pistia stratiotes), Watermeal (Motilla spp.), and algae (Pithophora and Cladophora).

PROPERLY MAINTAIN AND CALIBRATE ALL GROUND AND WATER BY USING A QUALIFIED SERVICE TECHNICIAN.

Where states have more stringent regulations, observe them.

Keep all copy by this product or other Group 14 herbicides.

Do not apply by air.

Method of control for targeted species. This may be the same field or in successive years as the primary pre-emergence process. Application if Group 14 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by this product or other Group 14 herbicides.

To delay herbicide resistance consider:

• Avoiding the consecutive use of this product or other target site of action Group 14 herbicides that might have a similar target site of action, on the same weed species.
• Using tank mixes or premixes with herbicides from different target site of action Group 14 herbicides that have a different target site of action, on the same weed species.
• Using tank mixes or premixes with herbicides from different target site of action Group 14 herbicides that have a similar target site of action, on the same weed species.
• Using tank mixes or premixes with herbicides from different target site of action Group 14 herbicides that have a different target site of action, on the same weed species.

This product is a Group 14 herbicide. Any weed population may contain or develop plants naturally resistant to this product or other Group 14 herbicides. Weed species with acquired resistance to Group 14 herbicides may eventually dominate the weed population if Group 14 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by this product or other Group 14 herbicides.

This product is a Group 14 herbicide. Any weed population may contain or develop plants naturally resistant to this product or other Group 14 herbicides. Weed species with acquired resistance to Group 14 herbicides may eventually dominate the weed population if Group 14 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by this product or other Group 14 herbicides.
To delay herbicide resistance consider:

- Avoiding the consecutive use of this product or other Group 14 herbicides.
- Using tank mixes or premixes with herbicides from different target site of action Group 14 herbicides that might have a similar target site of action, on the same weed species.
- Basing herbicide use on a comprehensive Integrated Pest Management (IPM) program.
- Contacting your local extension specialist, certified crop advisors and/or manufacturer for herbicide resistance management and/or integrated weed management recommendations for specific crops and resistant weed biotypes.

HELPFUL HINTS

- When making solution, use dilution water having a pH greater than 5.5.
- Apply in early morning to actively growing weeds and early in the season.
- This product is a contact herbicide that quickly degrades in the water column.
- This product is rapidly absorbed by target plants, but also breaks down quickly in water with a pH greater than 5.5. The pH of water surrounding mats of submerged vegetation can exceed 8.5 by early to mid-day, due to photochemical processes. Application of this product under these conditions may provide only partial weed control, and regrowth is likely.
- Clean spray equipment by flushing with clean water immediately after treatment.

TANK MIXES

This product may be tank mixed with 2,4-D, dipropylamine, or copper algicides for enhanced control. Mix and apply immediately. It is the pesticide user’s responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions or use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture. Contact Applied Biochemists for more information, 1-800-555-5106.

ADDITIVES

When applying this product to the foliage of floating or emerged aquatic weeds, mix with an adjuvant approved for use in aquatic sites. Mix this product with a non-ionic surfactant containing at least 80% active ingredient. Follow adjuvant manufacturer’s label directions. Verify mixing compatibility by a jar test before using.

SURFACE APPLICATION

- Determine the dimensions of the intended treatment area using the appropriate formula below:
  - Square pond: average length (ft.) x average width (ft.) x 70,800 = 1/4 acre
  - Oval pond: (average length (ft.) x average width (ft.) x 6.8) / 10,800 = 1/4 acre

1. Dilute 1.5 fl. oz. to 3.0 fl. oz. of PondKlear™ Aquatic Herbicide in 4 gallons of water per 1/4 acre.
2. Apply as a broadcast spray with a backpack or handgun sprayer directly to the foliage of actively growing weeds. This product will control the following species: Alligator Weed (Alternanthera philoxeroides), Duckweed (Lemna spp.), Frong-bit (Limnobium sporigia), Mosquito Fern (Azolla spp.), Salvinia (Salvinia spp.), Water Lettuce (Pistia stratiotes), Watermeal (Myccoli spp.), and algae (Pithophora and Cladophora).

If spray equipment is dedicated to aquatic herbicides, the following steps are to clean the spray equipment:

- Completely drain the spray tank and rinse the application equipment thoroughly, including the inside and outside of the tank and all in-line screens.

JAR TEST TO DETERMINE COMPATIBILITY OF ADJUVANTS AND THIS PRODUCT

- Perform a jar test before mixing commercial quantities of this product, when using this product for the first time, when using new adjuvants or when a new water source is being used.

1. Add 1 pint of the water to a quart jar. Use water from the same source and temperature as which will be used in the spray tank mixing operation.
2. Add 1 mliliter of this product to the quart jar for every 1 ft. oz. of this product per acre being applied (4 ml if 12 ft. oz. per acre is the desired rate of this product), gently mix until product goes into suspension.
3. Add 1 milliliter of non-ionic surfactant, gently mix.
4. Place cap on jar, invert 10 times, let stand for 15 minutes, evaluate.
5. If any of the following conditions are observed question the choice of adjuvant:
   a) Layer of oil or globules on the mixture’s surface.
   b) Flocculation: fine particles in suspension or as a layer on the bottom of the jar.
   c) Clarification: Thickening texture (coagulated) like gelatin.
   d) Clouding: Micronization of product into suds.

Sprayer Cleanup

- Place cap on jar, invert 10 times, let stand for 15 minutes, evaluate.

1. Drain tank completely.
2. Remove all nozzles and screens and rinse them with clean water.
3. Fill the tank with clean water and flush all hoses, booms, screens and nozzles.
5. Completely drain the spray tank and rinse the application equipment thoroughly, including the inside and outside of the tank and all in-line screens.

If spray equipment will be used for purposes other than applying aquatic herbicides, it must be thoroughly cleaned following application of this product. The following steps must be used to clean the spray equipment:

1. Completely drain the spray tank and rinse the application equipment thoroughly, including the inside and outside of the tank and all in-line screens.
2. Fill the tank with clean water and flush all hoses, booms, screens and nozzles.
3. Top off tank with clean water.
4. Circulate through sprayer for 5 minutes.
5. Then flush all hoses, booms, screens and nozzles for a minimum of 15 minutes.
6. Drain tank completely.

FLOATING AND EMERGED WEEDS USING SURFACE APPLICATION

- Dilute 1.5 fl. oz. to 3.0 fl. oz. of PondKlear™ Aquatic Herbicide in 4 gallons of water per 1/4 acre.
- Apply as a broadcast spray with a backpack or handgun sprayer directly to the foliage of actively growing weeds. This product will control the following species: Alligator Weed (Alternanthera philoxeroides), Duckweed (Lemna spp.), Frong-bit (Limnobium sporigia), Mosquito Fern (Azolla spp.), Salvinia (Salvinia spp.), Water Lettuce (Pistia stratiotes), Watermeal (Myccoli spp.), and algae (Pithophora and Cladophora).
Example: If using a 5-gallon backpack sprayer, dilute 1.5 to 3.0 fl. oz. of product in 4 gallons of water (use water having a pH of 5 to 7). Apply solution evenly to the weeds in each 1/4 acre of pond surface area. Mix additional product and water as necessary to treat the whole pond. Ensure thorough coverage of target plant foliage.

Proper coverage is essential for effective control. Apply in a manner that will ensure even distribution of the chemical within the treatment area. If a second application is required to provide control, make treatment when weeds are first observed, but no sooner than 28 days after the last treatment.

**SUBMERSED AND FLOATING WEEDS USING SUBSURFACE APPLICATION**

1. Determine the dimensions of the intended treatment area using the appropriate formula below:
   - Square pond: average length (ft.) x average width (ft.) x average depth (ft.) / 43,560 = acre-feet
   - Oval pond: (average length (ft.) x average width (ft.) x average depth (ft.) x 0.8) / 43,560 = acre-feet
   - Dilute 16 fl. oz. (200 ppb flumioxazin) to 32 fl. oz. (400 ppb flumioxazin) of PondKlear™ Aquatic Herbicide in 4 gallons of water per acre-foot.
   - Apply evenly as subsurface application with a backpack or handgun sprayer. This product will control the following species: Coontail (Ceratophyllum demersum), Duckweed (Lemna spp.), Fanwort (Cabomba caroliniana), Hydrilla (Hydrilla verticillata), Hydroptilus (Hydrophylax polyamera), Naiad, Southern (Najas guadalupensis), Pondweed, Curlyleaf (Potamogeton crispus), Pondweed, Sago (Potamogeton pectinatus), Pondweed, Variable-Leaf (Potamogeton diversifolius), Salvinia (Salvinia spp.), Water Lettuce (Pistia stratiotes), Watermilfoil, Eurasian (Myriophyllum spicatum), and Watermilfoil, Variable-Leaf (Myriophyllum heterophyllum).

**Subsurface Application Rates**

<table>
<thead>
<tr>
<th>Water Depth (feet)</th>
<th>Ounces of Pond-Klear™ Herbicide Required Per Surface Acre to Achieve Desired Water Concentration</th>

</table>

Example: Using a 5-gallon backpack sprayer, dilute 16 to 32 fl. oz. of product in 4 gallons of water (use water having a pH of 5 to 7). Apply solution evenly to the weeds in the water column by inserting the spray nozzle underneath the surface to achieve a target concentration of 200 ppb to 400 ppb. Mix additional product and water as necessary to treat the whole pond.

**STORAGE & DISPOSAL**

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

**PESTICIDE STORAGE**: Keep container closed when not in use. Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Do not reuse or refill container. Do not contaminate feed, feedstuffs, or drinking water. Do not store or transport near feed or food.

**PESTICIDE DISPOSAL**: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER DISPOSAL**: Nonrefillable container. Do not reuse container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank or store rinse water in a separate tank. Fill the container 1/4 full with water, then one cup of pond water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinse water for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning if available or puncture and dispose of in approved landfill, incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**WARRANTY DISCLAIMER**

To the extent permitted by applicable law neither the manufacturer nor the seller makes any warranty, expressed or implied concerning the use of this product in a manner that is not consistent with the use expressly set forth on the label. To the extent permitted by, and consistent with, applicable law, buyer assumes any risk of any use of this product that is not consistent with label use instructions. Read and follow the label directions.
Example: If using a 5-gallon backpack sprayer, dilute 1.5 to 3.0 fl. oz. of product in 4 gallons of water (use water having a pH of 5 to 7). Apply solution evenly to the weeds in the 1/4 acre of pond surface area. Mix additional product and water as necessary to treat the whole pond. Ensure thorough coverage of target plant foliage.

Proper coverage is essential for effective control. Apply in a manner that will ensure even distribution of the chemical within the treatment area. If a second application is required to provide control, make treatment when weeds are first observed, but no sooner than 28 days after the last treatment.

SUBMERGED AND FLOATING WEEDS USING SUBSURFACE APPLICATION

1. Determine the dimensions of the intended treatment area using the appropriate formula below:
   - Square pond: average length (ft.) x average width (ft.) x average depth (ft.) / 43,560 = acre-feet
   - Oval pond: (average length (ft.) x average width (ft.) x average depth (ft.) x 0.8) / 43,560 = acre-feet

2. Dilute 16 fl. oz. (200 ppb flumioxazin) to 32 fl. oz. (400 ppb flumioxazin) of PondKlear™ Aquatic Herbicide in 4 gallons of water per acre-foot.

3. Apply evenly as subsurface application with a backpack or handgun sprayer. This product will control the following species: Coontail (Ceratophyllum demersum), Duckweed (Lemna spp.), Fanwort (Cabomba caroliniana), Hydrilla (Hydrilla verticillata), Hydrilla (Hydrophylla polysperma), Naiad Southern (Najas guadalupensis), Pondweed, Curly-leaf (Potamogeton crispus), Pondweed, Saggo (Potamogeton perfoliatus), Pondweed, Variable-Leaf (Potamogeton divergens), Salvinia (Salvinia spp.), Water Lettuce (Pistia stratiotes), Watermeal ( Wolffia spp.), Watermilfoil, Eurasian (Myriophyllum spicatum), and Watermilfoil, Variable-Leaf (Myriophyllum heterophyllum).

Storage & Disposal

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Pesticide Storage: Keep container closed when not in use. Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Do not re-use or refill container. Do not contaminate feed, feedstuffs, or drinking water. Do not store or transport near feed or food.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

STORAGE & DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE STORAGE: Keep container closed when not in use. Keep pesticide in original container. Do not put concentrate or dilute into food or drink containers. Do not re-use or refill container. Do not contaminate feed, feedstuffs, or drinking water. Do not store or transport near feed or food.

PESTICIDE DISPOSAL: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Nonrefillable container. Do not reuse container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank or store rinse water in a drainable or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or mix tank or store rinse water for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning if available or puncture and dispose of in approved landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

WARRANTY DISCLAIMER

To the extent permitted by applicable law neither the manufacturer nor the seller makes any warranty, expressed or implied concerning the use of this product in a manner that is not consistent with the use expressly set forth on the label. To the extent permitted and consistent with, applicable law, buyer assumes any risk of use of this product that is not consistent with label use instructions. Read and follow the label directions.
FIRST AID

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 – 20 minutes. IF IN EYES: Hold eye open and rinse slowly and gently with water for 15 – 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

IN CASE OF EMERGENCY CALL: 1-800-654-6911

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Harmful if inhaled or absorbed through the skin. Causes moderate eye irritation. Avoid breathing spray mist. Avoid contact with skin, eyes or clothing.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Mixers, loaders, applicators, and other handlers must wear long-sleeved shirt and long pants, shoes and socks and waterproof gloves.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.
