**QUICK STRIKE™ Mole & Gopher Gasser**

**Kills Moles, Pocket Gophers, Woodchucks*, Norway Rats*, Skunks & Ground Squirrels**

**No Lighter Necessary**

**Easy Ignition Feature**

**Long Burn Time!**

**Protect Your Lawn**

**Waterproof**

**Windproof**

**Lights Every Time**

**Keep Out of Reach of Children**

**WARNING**

*Non-refillable container. Do not reuse or refill this container. Do not contaminate water, food, or feed by storage and disposal.*

**STORAGE AND DISPOSAL**

Do not store inside in areas subject to freezing. Store in a cool, dry location.

**DIRECTIONS FOR USE**

1. Read the specific instructions for the type of animal you intend to control. Prepare hole for treatment as specified in instructions below for target animal control.
2. Dig a 2- to 3-inch diameter hole as shown in instructions below. Place treatment in the end of the runway where you have determined that the animal is active.
3. Insert the Quick Strike Gasser into the hole with the lit end first. Never light the cartridge directly nor hold a burning cartridge in your hand.
4. Cover hole immediately with rock, soil, or sod while ensuring that you do not smother the cartridge. Immediately cover all openings from which smoke escape is visible.
5. Remove top lid to expose scratch surface on the cap.
6. If partly filled: Slowly air in hole by waving hand. This will allow smoke to fill the hole. Always follow numerical APPLICATION STEPS above. Find the next closest burrow and treat as above.
7. If partly filled: Air in hole by waving hand. This will allow smoke to fill the hole. Always follow numerical APPLICATION STEPS above. Find the next closest burrow and treat as above.
8. Insert cartridge into hole with the lit end first. Never light the cartridge directly nor hold a burning cartridge in your hand.
9. If partially filled: Slowly air in hole by waving hand. This will allow smoke to fill the hole. Always follow numerical APPLICATION STEPS above. Find the next closest burrow and treat as above.

**ENHANCED SPECIES CONSIDERATIONS**

**SCIENTIFIC CONSIDERATIONS**

Biologists have determined that carbide gas cartridges are only effective when used in a way that microorganisms in the target animal's digestive system can break it down into its toxic components. This process is necessary for the animal to overcome the immediate toxic effects of the gas and has the potential to result in the death of the animal. This process occurs more quickly in some species than in others and may result in the death of other nontarget animals. Therefore, the following considerations are important:

**Endangered Species Considerations**

Endangered species are protected under the Endangered Species Act of 1973. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service have listed hundreds of species as endangered or threatened. You must follow the Endangered Species Act guidelines when using this product. The Act requires that you use this product only according to the guidelines listed below.

**Endangered or Threatened Species Obligations**

Endangered or threatened species are protected under the Endangered Species Act of 1973. The U.S. Fish and Wildlife Service and the National Marine Fisheries Service have listed hundreds of species as endangered or threatened. You must follow the Endangered Species Act guidelines when using this product. The Act requires that you use this product only according to the guidelines listed below.

**Woodchucks***

California only

- The presence of woodchucks may be indicated by a network of surface ridges in the turf or by a series of gophers pushed up from tunnels in the soil. Treat as a mole except that the gopher burrow must be plugged with soil before treatment. This will prevent additional gophers from entering the area and will allow smoke to fill the hole.

**Skunks**

- The presence of skunks can be indicated by the presence of gopher burrows or by the presence of gopher holes in the soil. Treat as a mole except that the gopher burrow must be plugged with soil before treatment. This will prevent additional gophers from entering the area and will allow smoke to fill the hole.

**Norway Rat**

- The presence of Norway rats can be indicated by the presence of gopher burrows or by the presence of gopher holes in the soil. Treat as a mole except that the gopher burrow must be plugged with soil before treatment. This will prevent additional gophers from entering the area and will allow smoke to fill the hole.

**Moles**

(lawns, golf courses, non-crop areas) – The presence of moles may be indicated by a network of surface ridges in the turf or by a series of gophers pushed up from tunnels in the soil. Treat as a mole except that the gopher burrow must be plugged with soil before treatment. This will prevent additional gophers from entering the area and will allow smoke to fill the hole.

**Pocket Gophers**

- The presence of pocket gophers can be indicated by a network of surface ridges in the turf or by a series of gophers pushed up from tunnels in the soil. Treat as a mole except that the gopher burrow must be plugged with soil before treatment. This will prevent additional gophers from entering the area and will allow smoke to fill the hole.

**Eastern Indigo snake (Drymarchoncoraiscouperi):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.

**California tiger salamander (Ambystoma californiense):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.

**Giant Kangaroo Rat (Dipodomys ingens):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.

**Coachella Valley fringe-toed lizard (Uma inornata):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.

**Western Pond Turtle (Actinemys marmorata):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.

**Giant Kangaroo Rat (Dipodomys ingens):**

- Biologists need to consult the U.S. Fish and Wildlife Service or the California Department of Fish and Wildlife for additional information on habitat occupied by endangered species.
**Victor® V® Quick Strike™ Mole & Gopher Gasser**
Kills Moles, Pocket Gophers, Woodchucks*, Norway Rats**, Skunks & Ground Squirrels

**Minimum Primer Burn Time:** 5 seconds. After ignition, cartridge produces toxic gases (such as oxides of sulfur). Fumes may be harmful if inhaled. See back of label card for additional precautionary statements, including First Aid information.

**Directions for Use:** It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Use only for the sites, pests and application methods described on this label. Do not use this product until you have read all of its labeling and fully understand the Directions for Use and all use precautions which appear on the container label and the package insert. Only use inside of burrows and never inside of buildings. See back of label card and Package Insert for complete directions. Warning: Clear tunnel carefully before inserting tube as it will “back-fire” if hole is not properly cleared.

* Not for use on woodchucks in California
** Use in North Carolina on Norway rats only

**ACTIVE INGREDIENTS:**
- Sodium Nitrate........ 50%
- Sulfur...................... 38%
- Charcoal.................... 9%
- OTHER INGREDIENTS: ..... 3%

**TOTAL............... 100.00%**

EPA Reg. No. 36488-67 EPA Est. No. 92938-IN-1
