GERMISIDE 
Fungicide + Disinfectant + Virucide
Tuberculocidal + Deodorizer + Cleaner + Detergent
When diluted with soft or hard water (400 ppm CaCO₃)
See side panel for additional precautionary statements

Sterile unless packaging is compromised

This product is a non-alkaline phenolic germicidal detergent effective in hard or soft water even in the presence of organic soil (5% inactivation by the soil when diluted with 400 ppm A.O.A.C. hard water to make a 1:128 (one ounce per one gallon) solution, in the presence of 5% organic soil (serum), 10 minutes at 20°C. This product was tested using the Virucidal Assay against Feline calicivirus (Surrogate for Human Norovirus), when diluted with 400 ppm A.O.A.C. hard water to make a 1:128 (one ounce per one gallon) solution, in 10 minutes at 20°C. This product was tested using the A.O.A.C. Fungicidal Assay against Monosporium canis, inoculated with 10² cfu/ml (one square centimeter of 1:1000 dilution) and 10⁻⁵ (one square centimeter of 1:100000 dilution) of the organism at the beginning of the test. This product was tested against Malassezia furfur, inoculated with 10⁴ cfu/ml (one square centimeter of 1:1000 dilution) and 10⁻⁶ (one square centimeter of 1:100000 dilution) of the organism at the beginning of the test.

DIRECTIONS FOR USE
In a situation of limited water use, this product is best mixed immediately with water. In other settings, the product can be stored in a closed container for up to 90 days and mixed with water as needed. However, this product should not be mixed in advance of use in equipment such as mix tanks or application equipment. This product is effective when stored in closed, capped, and properly labeled containers in a cool, dry location. This product is effective when stored in closed, capped, and properly labeled containers in a cool, dry location.

For the following uses, this product must be used to prepare fresh solutions daily or as solution becomes dirty:

CLEANING AND DISINFECTING WASHABLE, HARD, NON-POROUS SURFACES: Prepare a fresh dilution at least daily or as solution becomes dirty, discard and replace with a fresh one.

GENERAL: This product has demonstrated effectiveness against influenza A virus and is expected to inactivate all influenza A viruses. This product has demonstrated effectiveness against hepatitis A virus and is expected to inactivate all hepatitis A viruses.

NOTE: It is extremely noisy when using high-coring, cutting blades while simultaneously chemically treating a plant tissue and applying a pesticide. Either line and disinfecting variables, hand, non-phenolic detergent.
