DETAILED WATER BALANCE

1. Calculate ppm of calcium hardness and total alkalinity for the pool water.
2. Subtract ppm of calcium hardness and total alkalinity from 100 and 120, respectively.
3. Divide the result by 4.
4. Add the result to the ppm of calcium hardness to get the ppm of total hardness for the pool water.
5. Multiply the ppm of total hardness by the ppm of total alkalinity to get the ppm of free alkalinity for the pool water.
6. Add the ppm of free alkalinity to the ppm of calcium hardness to get the ppm of total hardness for the pool water.
