FIRST AID

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing. Call a poison control center or doctor for treatment advice.

IF SWALLOWED: Immediately call a poison control center or doctor. Do not induce vomiting unless told to do so by a poison control center or doctor.

IF ON SKIN: Thoroughly wash exposed skin with soap and water. Remove contaminated clothing and get medical attention if irritation persists.

NOTE TO PHYSICIAN:
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also call 1-800-248-7763 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS – CAUTION

Causes moderate eye and skin irritation. Avoid contact with eyes and skin.

DIRECTIONS FOR USE

READ THE ENTIRE LABEL PRIOR TO USE. USE STRICTLY IN ACCORDANCE WITH ALL LABEL PRECAUTIONS AND DIRECTIONS. Shake well before using.

Use Essentria® Wasp & Hornet Spray to kill wasps, hornets, yellow jackets and spiders outdoors and indoors. Applications may be made to residential, commercial and institutional establishments such as schools, hospitals, office buildings, homes, apartments, warehouses and other locations where pests are a problem. Indoor locations would be identified as attics, stairwells, mechanical rooms, barns, sheds, non-food/non-feed warehouses, garages, and carports.

Prior to treatment, shake can well, hold can upright and, stand upwind at a safe distance from nests, and spray away from self and other persons. This product is generally non-staining, but test product in a small, inconspicuous area to determine if staining potential exists. This product may cause phytotoxicity to sensitive plant materials if sprayed directly.

WASPS, HORNETS, YELLOW JACKETS, AND SPIDERS

Wasp: Spray nest until thoroughly wet. Wasp on the nest will fall quickly to the ground, wasps returning to the nest will be repelled. Wait 24 hours before removing nest.

Hornets: Hornets build nests under eaves, in trees, shrubs, and Ivy, and in sheltered areas of buildings. It is best to wait until dusk or early morning to treat as hornets are less active at that time. Locate entrance hole in the nest, and thoroughly spray the entrance hole. Spraying the outside of the nest and not the entrance hole will not have the desired effect and may cause the hornets to attack. For best results for large nests, repeat application.

Yellow Jackets: Yellow jackets typically build nests in the ground or in tree stumps, landscape timbers, and railroad ties. Locate entrance holes; note that there may be more than one. Wait until dusk or early morning to spray. Spray entrance holes, for best results for large nests, repeat application.

Spiders: Thoroughly apply product to spiders and their webs, making sure to contact as many as possible.
