For control of certain grasses and broadleaf weeds in alfalfa and sainfoin, asparagus, carrots, field corn, garbanzo beans, lentils and peas, potatoes, soybeans, spring and winter barley and winter wheat, sugarcane, sweet corn, and tomatoes

Also for use on established bermudagrass turf

ACTIVE INGREDIENT: BY WT.
Metribuzin, 4-Amino-6-(1,1-dimethylethyl)-3-(methylthio)-1,2,4-triazin-5(4H)-one .................................................. 75.0%
OTHER INGREDIENTS: ................................................................. 25.0%
TOTAL: .............................................................................................. 100.0%
EPA Reg. No. 70506-103-5905
EPA Est. No. 41876-IND-004

STOP – READ THE LABEL BEFORE USE
KEEP OUT OF REACH OF CHILDREN
CAUTION
See inside for additional Precautionary Statements and complete Directions For Use.
FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure, or accident, call CHEMTREC at 1-800-424-9300.

NET WEIGHT: 25 POUNDS

Manufactured For
HELENA CHEMICAL COMPANY
225 SCHILLING BOULEVARD, SUITE 300 • COLLIERVILLE, TENNESSEE 38017

AD 082009
Made in India
FIRST AID

If swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If on skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For emergency medical treatment, contact the Rocky Mountain Poison Control Center at 1-866-673-6671.

Note to Physician: Treat patient symptomatically.

FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure, or accident, call CHEMTREC at 1-800-424-9300.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION
May be harmful if swallowed or absorbed through skin. Causes moderate eye irritation.

Personal Protective Equipment (PPE): Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category A on an EPA Chemical Resistant Category Selection Chart.

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Chemical-resistant gloves made out of any waterproof material
- Shoes plus socks

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

User should:
- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Do not contaminate feed or food. Keep out of reach of children.

Obtain prompt medical aid if poisoning should occur.

Symptoms of Poisoning: The compound does not cause any definite symptoms that would be diagnostic. Poisoning is accompanied by breathing difficulties and sedation.

ENVIRONMENTAL HAZARDS

For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from areas treated. Do not contaminate water when disposing of equipment washwaters.

GROUND WATER ADVISORY: Metribuzin is a chemical which can travel (seep or leach) through soil and can contaminate ground water which may be used as drinking water. Metribuzin has been found in ground water as a result of agricultural use. Users are advised not to apply metribuzin where the water table (ground water) is close to the surface, and where the soils are very permeable, i.e., well drained soils such as loamy sands. Your local agricultural agencies can provide further information on the type of soil in your area and the location of ground water.
DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:

- Coveralls
- Chemical-resistant gloves, such as Butyl Rubber, Nitrile Rubber, Neoprene Rubber, or Natural Rubber.
- Shoes plus socks

Non-Agricultural Use Requirements

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow others to enter treated area until sprays have dried. For dry fertilizer application, do not enter or allow others to enter until dusts have settled.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, or feed. Store in original container and out of the reach of children, preferably in a locked storage area.

Handle and open container in a manner as to prevent spillage. If the container is leaking or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not walk through spilled material. Dispose of pesticide as directed below. In spill or leak incidents, keep unauthorized people away.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Disposal: Nonrefillable container. Do not reuse or refill this container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinseate into application equipment or a mix tank or store rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.
USE INFORMATION

MIXING: When using Metribuzin 75 DF, make sure the sprayer is completely clean, free of rust or corrosion which occurs from winter storage. Examine strainers and screens to be sure the sprayer is clean from previously used pesticides.

Any tank-mix containing Metribuzin 75 DF should be kept agitated and sprayed out immediately. Do not allow tank-mixes to stand for prolonged periods of time. The proper mixing procedures for Metribuzin 75 DF alone or in tank-mix combinations with other herbicides is:

1. Fill the spray tank 1/4 to 1/3 full with clean water.
2. Add specified rate of Metribuzin 75 DF while recirculating and with agitation running.
3. Mix thoroughly and add clean water to fill spray tank to desired level.
4. Add the other herbicide to tank last and agitate thoroughly.
5. Continue agitation during application and until sprayer tank is empty.

This product may be tank mixed with 2,4-DB, 2,4-D Low Volatile Ester (LVE), Alachlor, Ally, Linuron, Marksman, Command, Command Concentrate, Easton, Firestar, Fusion, Granstar, Grasmist, Harmony, Sila, Rainwe, Hamersil, Ladda, Lactil, Lasso, Limet, Linuron, Marksmen, Matia, MCPA, Metabolizer, Metolachlor, Pentamix, Pass, Punch, Pursuit, Pursuit Plus, Resource, Roundup, Roundup Ultra, Scepter, Select, Silvamix, Squall, Sonain, Surfanik, Supra, Supra 100, Toprac, Touchdown, or Treflan in accordance with the most restrictive of label limitations and precautions. Do not exceed label dosage rates. This product may not be mixed with any product containing a label prohibition against such mixing. Refer to the crop specific information section of this label for additional information.

SOIL TEXTURE: As used on this label, “Coarse soils” are loamy sand or sandy loam soils. “Medium soils” are loam, silt, or clay loam. “Fine soils” are silty clay, clay loam, clay, or clay clay loam. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

PRECAUTIONS AND RESTRICTIONS

Do not apply sprays to drift to or on adjacent desirable plants.

Apply this product only as specified on this label.

Do not use on other crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 75 DF.

For all uses: Low-pressure and high-volume hand-wand equipment is prohibited.

CHEMIGATION

Metribuzin 75 DF may be used for application through sprinkler irrigation equipment to potatoes, soybeans, tomatoes, and asparagus as directed on this label. Refer to the crop sections of this label for specified rates, weeds controlled or suppressed, restrictions, and special precautions.

Apply this product only through sprinkler (including center pivot, lateral move, or solid set) irrigation systems. Do not apply this product through any other type of irrigation system.

Do not apply to crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not use or other crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 75 DF.

For all uses: Low-pressure and high-volume hand-wand equipment is prohibited.

CHEMIGATION

Metribuzin 75 DF may be used for application through sprinkler irrigation equipment to potatoes, soybeans, tomatoes, and asparagus as directed on this label. Refer to the crop sections of this label for specified rates, weeds controlled or suppressed, restrictions, and special precautions.

Apply this product only through sprinkler (including center pivot, lateral move, or solid set) irrigation systems. Do not apply this product through any other type of irrigation system.

Do not apply to crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 75 DF.

For all uses: Low-pressure and high-volume hand-wand equipment is prohibited.

CHEMIGATION

Metribuzin 75 DF may be used for application through sprinkler irrigation equipment to potatoes, soybeans, tomatoes, and asparagus as directed on this label. Refer to the crop sections of this label for specified rates, weeds controlled or suppressed, restrictions, and special precautions.

Apply this product only through sprinkler (including center pivot, lateral move, or solid set) irrigation systems. Do not apply this product through any other type of irrigation system.

Do not apply to crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 75 DF.

For all uses: Low-pressure and high-volume hand-wand equipment is prohibited.

CHEMIGATION

Metribuzin 75 DF may be used for application through sprinkler irrigation equipment to potatoes, soybeans, tomatoes, and asparagus as directed on this label. Refer to the crop sections of this label for specified rates, weeds controlled or suppressed, restrictions, and special precautions.

Apply this product only through sprinkler (including center pivot, lateral move, or solid set) irrigation systems. Do not apply this product through any other type of irrigation system.

Do not apply to crops grown for food or forage. Observe all cautions and limitations on labeling of all products used in mixtures.

Do not rotate any crop not listed on this label for 18 months following application of Metribuzin 75 DF.

For all uses: Low-pressure and high-volume hand-wand equipment is prohibited.
AERIAL DRIFT REDUCTION ADVISORY INFORMATION

Avoiding spray drift at the application site is the responsibility of the applicator. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions.

The following drift management requirements must be followed to avoid off-site target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

1. The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
2. Nozzles must always point backwards parallel with the air stream and never be pointed downwards more than 45 degrees.
3. Where states have more stringent regulations, they must be observed.
4. The applicator should be familiar with and take into account the information covered in the Aerial Drift Reduction Advisory Information.

INFORMATION ON DROPLET SIZE: The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Application of droplets greater than 300 microns gives the best drift management results.

CONTROLLING DROPLET SIZE:

- Volume - Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure - Do not exceed the nozzle manufacturer’s recommended pressures. For many nozzle types lower pressure produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing pressure.
- Number of nozzles - Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation - Orienting nozzles so that the spray is released parallel to the air stream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- Nozzle Type - Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles.

AERIAL APPLICATION:

APPLICATION HEIGHT: Applications should not be made at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Applications at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

BOOM LENGTH: For same use patterns, reducing the effective boom length to less than 3/4 of the wingspan or rotor length may further reduce drift without reducing swath width.

APPLICATION HEIGHT: Applications should be made at the lowest height that is safe reduces exposure of droplets to evaporation and wind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upward. Swath adjustment distance should increase, with increasing drift potential (higher wind, smaller drops, etc.).

WIND: Drift potential is lowest between wind speeds of 2 to 10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application should be avoided before 2 mph due to variable wind direction and high inversion potential. NOTE: Local terrain can influence wind patterns. Every applicator should be familiar with local wind patterns and how they affect spray drift.

TEMPERATURE AND HUMIDITY: When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Drift potential is most severe when conditions are both hot and dry.

TEMPERATURE INVERSIONS: Applications should not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that lays down and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

SENSITIVE AREAS: Metribuzin 75 DF should only be applied when the potential for drift to adjacent sensitive areas (e.g. residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g. when wind is blowing away from the sensitive areas).
COMMERCIAL IMPREGNATION AND APPLICATION OF METRIBUZIN 75 DF ON DRY BULK FERTILIZER

Dry bulk fertilizer may be impregnated or coated with Metribuzin 75 DF for application to established alfalfa and to soybeans. All directions, cautions, and special precautions on this label must be followed along with state regulations relating to dry bulk fertilizer blending, impregnating and labeling.

Impregnation: To impregnate, use a system consisting of a belt, conveyor, or closed drum which is used for dry bulk fertilizer blending. Any commonly used fertilizer can be impregnated with Metribuzin 75 DF except ammonium nitrate, or fertilizers containing ammonium nitrate, potassium nitrate, or sodium nitrate. Do not use on powder limestone.

Apply using a minimum of 200 lbs. dry bulk fertilizer per acre and up to a maximum of 450 lbs. per acre. To impregnate or coat dry bulk fertilizer, mix Metribuzin 75 DF with sufficient water to form a sprayable slurry. The delivery nozzles must be directed to deliver a fine spray toward the fertilizer for thorough coverage while avoiding spray contact with mixing equipment.

Uniform impregnation of Metribuzin 75 DF to dry bulk fertilizer will vary and if the absorptivity is not adequate, an absorptive powder may be added to produce a dry, free-flowing mixture. Micro-Cel E (Johns-Manville Product Corporation) is the recommended absorptive powder. When another herbicide is used with Metribuzin 75 DF, mix and impregnate immediately.

Apply immediately after impregnation unless experience has shown that impregnated fertilizer can be stored without becoming lumpy and difficult to spread.

Rates: Select the specified rate of Metribuzin 75 DF per acre from the appropriate section of this label and refer to the formula below to determine the amount of Metribuzin 75 DF which is to be impregnated on a ton of dry bulk fertilizer based on the amount of fertilizer which will be distributed on one acre.

Lbs. Metribuzin 75 DF X 2000 Lbs. Fertilizer = Lbs. Metribuzin 75 DF per ton of fertilizer

APPLICATION: Uniform application is essential for satisfactory weed control. Accurate calibration of fertilizer application equipment is essential for uniform distribution to the soil surface. The recommended method of application is to apply 1/2 the recommended rate and overlap 50 percent or to double apply by splitting the middle to obtain the best distribution pattern.

If fertilizer materials are excessively dusty, use diesel oil or other suitable additive to reduce dust prior to impregnation as dusty fertilizer will result in poor distribution during application.

Crop injury and/or poor weed control may occur where the impregnated fertilizer is not uniformly applied.

INCORPORATION AND COMBINATION USES: When Metribuzin 75 DF is to be used in combination with another herbicide, follow directions on this label for combinations, rates, crops, incorporation, and special precautions.

ALFALFA AND SAINFOIN

Metribuzin 75 DF herbicide is labeled for use in alfalfa and sainfoin in the following areas:

1. Alfalfa and sainfoin (including mixed stands with grasses) (all areas except California).
2. Alfalfa and sainfoin (including mixed stands with grasses) (California only).
4. Alfalfa - Post Dormant Application of Metribuzin 75 DF Impregnated on Dry Fertilizer Only (Connecticut, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas and Wisconsin).
5. Alfalfa - Non-Dormant, Non-Winter Hardy varieties (Arizona only).

Metribuzin 75 DF may be used in aerial or ground spray equipment as a broadcast surface application to established crops of alfalfa and sainfoin for the control of certain grass and broadleaf weeds.

APPLICATION: Refer to “Use Information” in the front of this label for detailed information on the application of Metribuzin 75 DF. For information on applying Metribuzin 75 DF in fluid or on dry fertilizer refer to the “Application of Metribuzin 75 DF in Fluid Fertilizers” or “Commercial Impregnation And Application Of Metribuzin 75 DF On Dry Bulk Fertilizer” under the “Use Information” section of this label.

SPECIAL PRECAUTIONS: Use Metribuzin 75 DF only on established alfalfa and sainfoin. Do not apply Metribuzin 75 DF after growth begins in the spring or before growth ceases in the fall, except as specified on this label. Do not graze or harvest within 28 days after application.

For best weed control, apply Metribuzin 75 DF when weeds are less than 2 inches tall or before weed foliage is 2 inches in diameter. Reduced weed control may occur when extended dry conditions follow application of Metribuzin 75 DF.

Crop injury may occur when:

1. Crop is under stress conditions such as diseases, insect infestations, poorly drained soils, drought or winter injury at time of application;
2. Crop is treated within 12 months after seeding;
3. There is excessive irrigation or rainfall immediately after application. Do not apply more than 1/2 inch of water in the first irrigation after Metribuzin 75 DF is applied.
ALFALFA AND SAINFOIN
(All Areas Except California)

**BROADCAST APPLICATIONS**

<table>
<thead>
<tr>
<th>CROP</th>
<th>METRIBUZIN 75 DF Lb/Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alfalfa and Sainfoin (Except California)</td>
<td>1/3 to 1-1/3</td>
</tr>
</tbody>
</table>

Select the proper dosage according to weeds known to be and present in field to be treated. On loamy sand soils in Oregon and Washington, do not apply more than 2/3 lb of Metribuzin 75 DF per acre.

**FOR USE ON MIXED STANDS OF ALFALFA AND GRASSES**

Rates of 2/3 to 1 lb of Metribuzin 75 DF per acre will provide partial reduction of forage grass stands. These rates may be used to reduce forage grass stands to prevent crowding out of alfalfa. Higher rates will severely reduce forage grass stands.

Metribuzin 75 DF should not be used on sand soils. In areas West of the Rocky Mountains, avoid using Metribuzin 75 DF on soils with calcareous surface area, high levels of lime or sodium, or a pH greater than 8.2.

### WEEDS CONTROLLED (Except California)

#### 1/3 to 1/2 Lb METRIBUZIN 75 DF/Acre

- **Broadleaves**
  - Chickweed, Common
  - Dandelion
  - Henbit
  - Kochia

#### 1/2 to 2/3 Lb METRIBUZIN 75 DF/Acre

- **Broadleaves**
  - Chickweed, Downy
  - Cheat
  - Deadnettle, Purple

- **Grasses**
  - Foxtail, Green

#### 2/3 to 1-1/3 Lb METRIBUZIN 75 DF/Acre

- **Broadleaves**
  - Fleabane, Rough
  - Fieldpurslane, Common
  - Kochia

- **Grasses**
  - Foxtail, Smooth
  - Bluegrass

#### 2/3 to 1-1/3 Lb METRIBUZIN 75 DF/Acre

- **Broadleaves**
  - Grasshead, Barnyardgrass

- **Grasses**
  - Barnyardgrass

**Weeds Partially Controlled:** At the rate of 1-1/3 lb/acre Metribuzin 75 DF may be used to reduce the competition from curly dock (Rumex crispus).

At 2/3 to 1-1/3 lb/acre, Metribuzin 75 DF may be used to reduce the competition of German Moss or knawel (Scleranthus annus).
ALFALFA AND SAINFOIN  
(California Only)  

Metribuzin 75 DF may be used in aerial or ground spray equipment as a broadcast surface application to dormant established crops of alfalfa and sainfoin.  

APPLICATION: Metribuzin 75 DF may be used in aerial or ground spray equipment as a broadcast surface application to dormant established crops of alfalfa and sainfoin for control of certain grass and broadleaf weeds. Do not apply Metribuzin 75 DF after growth begins in the spring or before growth ceases in the fall. Do not apply to either alfalfa or sainfoin during the first growing season after seeding.  

For information on Commercial Impregnation and application of Metribuzin 75 DF on dry bulk fertilizer, refer to the appropriate section of this label.  

For information on applying Metribuzin 75 DF in fluid fertilizer solutions to alfalfa, refer to the appropriate section of this label.  

WEEDS CONTROLLED  

1/2 to 2/3 Lb METRIBUZIN 75 DF/Acre  

Cheatgrass (downy brome)  
(Bromus secalinus)  

2/3 to 1-1/3 Lb METRIBUZIN 75 DF/Acre  

Kochia  
(Kochia scoparia)  

Chickweed, Common Kochia Mustard, Tansy  
(Stellaria media) (Kochia scoparia) (Descurainia pinnata)  

Grasses  
Smooth Brome  
(Stellaria media)  

1-1/3 Lb METRIBUZIN 75 DF/Acre  

Henbit Mustard, Blue Shepherdspurse  
(Lamium amplexicaule) (Capsella bursa-pastoris)  

Grasses  
Barnyardgrass  
(Echinochloa crus-galli)  

BROADCAST APPLICATIONS  

Select the proper dosage according to weeds known to be present in the field to be treated. Apply specified dosage in 20 to 40 gallons of water per acre with ground spray equipment or 3 to 10 gallons of water per acre with aerial spray equipment fitted with nozzles suitable for broadcast applications of herbicides. Treat only dormant established crops of alfalfa and sainfoin. Injury may occur to alfalfa if Metribuzin 75 DF is applied earlier than 12 months after seeding. Do not apply after Spring growth begins or before growth ceases in the Fall. Do not graze or harvest within 28 days after application.  

At the 1-1/3 lb/acre rate, Metribuzin 75 DF may be used for suppression of curly dock.  

FOR USE ON MIXED STANDS OF ALFALFA AND GRASSES: Rates of 2/3 to 1-1/3 lb of Metribuzin 75 DF per acre will provide partial reduction of forage grass stands. These rates may be used to reduce forage grass stands to prevent crowding out of alfalfa. Higher rates will severely reduce forage grass stands. Do not apply with aerial spray equipment when wind speed is greater than 10 mph. Do not apply when weather conditions favor spray drift and/or when sensitive cool season crops, such as cole crops, onions, peas, or strawberries, are present in adjacent fields. Applications should not be made when weather conditions favor spray drift, especially in areas where wheat is growing on coarse textured soils in adjacent fields, or injury may occur.  

ALFALFA  
Metribuzin 75 DF plus Gramoxone Inteon Tank-mix  

ALFALFA AND SAINFOIN  
(Including Mixed Stands With Grasses)  

Metribuzin 75 DF may be used in aerial or ground spray equipment as a broadcast surface application to dormant established crops of alfalfa and sainfoin.  

APPLICATION: Metribuzin 75 DF may be used in aerial or ground spray equipment as a broadcast surface application to dormant established crops of alfalfa and sainfoin for control of certain grass and broadleaf weeds. Do not apply Metribuzin 75 DF after growth begins in the spring or before growth ceases in the fall. Do not apply to either alfalfa or sainfoin during the first growing season after seeding.  

For information on applying Metribuzin 75 DF in fluid fertilizer solutions to alfalfa, refer to the appropriate section of this label.  

For information on Commercial Impregnation and application of Metribuzin 75 DF on dry bulk fertilizer, refer to the appropriate section of this label.  

WEEDS CONTROLLED: Metribuzin 75 DF plus Gramoxone Inteon (2 to 3 pt/acre) tank-mix application will control established weeds. Gramoxone controls weeds by contact activity.  

WEEDS CONTROLLED: Metribuzin 75 DF plus Gramoxone Inteon (2 to 3 pt/acre) tank-mix application will control established weeds. Gramoxone controls weeds by contact activity.
1/3 to 1/2 Lb of METRIBUZIN 75 DF Per Acre

Bluegrass
Cheat
Common Chickweed
Dowry brome
Field pennycress
Japanese brome
Shepherdspurse

1/2 to 1 Lb of METRIBUZIN 75 DF Per Acre

Bluegrass
Cheat
Common Chickweed
Dowry brome
Field pennycress
Japanese brome
Shepherdspurse

Use METRIBUZIN 75 DF at 2/3 to 1 lb/Acre for control of the following weeds:

Kochia
Little barley
Manroot (Shoreweed)
Meadow salsify
Pepperweed
Prickly lettuce
Redroot pigweed
Rough reabme
Rye grass
Smooth brome
Sowthistle
Tanery mustard
White cockle
Wild oats
Wild buckwheat
Yellow rocket

FOR USE ON MIXED STANDS OF ALFALFA AND GRASSES:
Raties of 2/3 to 1 lb of Metribuzin 75 DF per acre will provide partial reduction of forage grass stands. These rates may be used to reduce forage grass stands to prevent crowding out of alfalfa.

Do not graze or harvest within 42 days after application.

In areas west of the Rockies, avoid the use of Metribuzin 75 DF on soils with calcareous surface, soils with high levels of lime or sodium, and with a pH greater than 8.2.

Do not apply when weather conditions favor spray drift. Aerial application should not be made when wind speed is greater than 10 mph.

Do not use on sand soil.

Refer to the Gramoxone Inteon label for additional directions, weed species controlled and precautions.

Post Dormant Application of Metribuzin 75 DF Impregnated on Dry Fertilizer Only

Metribuzin 75 DF may be applied after dormancy has broken, but prior to three inches of new alfalfa shoot growth, only when impregnated on dry fertilizer in Connecticut, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Nebraska, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, South Dakota, Tennessee, Texas and Wisconsin. Apply at rates of 1 to 1-1/3 lb per acre as directed on this label for application during dormancy. Apply only when alfalfa foliage is dry or crop injury may occur. When using this application method, do not harvest or graze treated alfalfa for 60 days after application.

ALFALFA
Non-Dormant, Non-Winter Hardy Varieties

Metribuzin 75 DF may be used as a broadcast surface application to established crops of non-dormant alfalfa varieties for pre-emergence and postemergence control of certain winter annual weeds following either a fall or winter sheep grazing/green-chop harvest.

WEEDS CONTROLLED

Field pepperweed
Lambsquarters
Little mallow (cheeseweed)
Littledseed canarygrass
London rocket (mustard)

APPLICATIONS

CROP
Alfalfa

Dosage/Acre
Metrribuzin 75 DF
1/2 to 2/3

SPECIAL PRECAUTIONS:
Maintain continuous mechanical agitation in the spray tank to ensure a uniform spray mixture.

Do not apply with aerial spray equipment when wind speed is greater than 10 mph. Do not apply when weather conditions favor spray drift and/or when sensitive cool season crops, such as cole crops, onions, peas or strawberries, are present in adjacent fields. Applications should not be made when weather conditions favor drift especially in areas where wheat is growing on course textured soils in adjacent field, or injury may occur.
ASPARAGUS (Established)
Metribuzin 75 DF may be used in ground spray equipment or sprinkler irrigation (center pivot, lateral move, or solid set) systems as a single pre-emergence broadcast application or as a split application consisting of a pre-emergence broadcast application followed by a post-harvest broadcast application.
Aerial application is prohibited.
Refer to the “Use Information” section of this label for directions.

WEEDS CONTROLLED: Metribuzin 75 DF, applied to established asparagus according to directions, will effectively control:

**Broadleaves**
- Chickweed, Common
- Lambsquarters
- Pigweed, Redroot
- Sorrel, Red

**Grasses**
- Crabgrass
- Foxtails

**SPECIAL PRECAUTIONS (Asparagus):**
Do not use on newly seeded asparagus nor on young plants during the first growing season after setting crowns.

DO NOT APPLY POST HARVEST APPLICATIONS UNTIL AFTER THE LAST HARVEST OF SPEARS.

Special Conditions of Sale Provision for Use on Carrots:
The following directions for use were developed under the direction of IR-4 (government minor crops use program). As such the testing was done independently from the testing program of Helena Chemical Company. Buyer is advised that Helena Chemical Company makes no assurances regarding satisfaction with the product and to the extent consistent with applicable law all risks of crop injury or product performance are assumed by the Buyer.

Apply Metribuzin 75 DF herbicide with ground equipment as specified below under “Applications.” For effective control of broadleaf weeds with postemergence applications, apply Metribuzin 75 DF before weeds are 1 inch in height or diameter. Thorough spray coverage is essential for adequate weed control.

DO NOT USE AIR BLAST OR OTHER HIGH PRESSURE SPRAY EQUIPMENT TO MAKE POSTEMERGENCE APPLICATIONS.

Refer to “Mixing” under the “Use Information” section in the front of this label.

For specific application information see “Use Information” and “Application” sections at the front of this label.

**CARROTS**
WEEDS CONTROLLED: Metribuzin 75 DF applied to carrots according to directions will effectively control:

- Carpetweed
- Lambsquarters, Common
- Pigweed, Smooth
- Proly Lettuce

- Gallinago
- Mustard, Wild
- Pinnweeed
- Shepherds purse

- Horsetail
- Pigwee, Redroot
- Pineappleweed
- Capsella bursa-pastoris
Metribuzin 75 DF may be applied to field corn after crop emergence until just prior to tasseling. Broadcast applications may be made with ground or aerial equipment.

**APPLICATION:**
- Postemergence use in field corn. Herbicides which may be tank-mixed with Metribuzin 75 DF include:
  - 2,4-D
  - Atrazine
  - Banvel
  - Basagran
  - Buctril/Buctril Gel
  - Buctril + atrazine (Premix)
  - Clarity
  - Laddok S-12
  - Markuman
  - Pursuit
  - Resource
  - Scorpion III

*Note: Use only on Pursuit resistant/tolerant corn hybrids (IMI-Corn).*

**FIELD CORN**

**POSTEMERGENCE APPLICATION**
Metribuzin 75 DF may be used for control of selected broadleaf weeds when applied as a tank-mix combination with certain broadleaf herbicides presently registered and also for postemergence use in field corn. Herbicides which may be tank-mixed with Metribuzin 75 DF include:

<table>
<thead>
<tr>
<th>Herbicide</th>
<th>Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>2,4-D</td>
<td>1.5 lbs/Ac</td>

<tr>
<td>Scorpion III</td>
<td>1 lb/Ac</td>
</tr>
</tbody>
</table>

**APPLICATION:**
- Metribuzin 75 DF may be applied to field corn after crop emergence until just prior to tasseling. Broadcast applications may be made with ground or aerial equipment. For optimum weed control, apply treatments when weeds are small and actively growing, but before reaching the maximum heights listed in the Weeds Controlled table.

**POSTEMERGENCE BROADCAST APPLICATION**
- **Ground Application:** Adjust nozzle height above crop and weed canopy to ensure uniform spray coverage. Gallonage should be increased with increasing weed size and population density.
- For tank-mixes of Metribuzin 75 DF plus atrazine, Basagran, Laddok S-12, Buctril, Buctril + atrazine, Pursuit, Resource, Tough, or 2,4-D amine formulations, use flat fan nozzles spaced a maximum of 20 inches apart. Best results are achieved using a minimum spray volume of 10 gallons per acre and spray pressure from 20 to 40 psi. For Metribuzin 75 DF tank-mixes with Banvel, Clarity, Markuman, or 2,4-D amine formulations, use drift-reducing nozzles which are specifically designed to produce coarse sprays and reduce the amount of driftizable fines. Additional measures which will help avoid potential drift to sensitive crops and plants include using a minimum spray volume of 20 gallons per acre and keeping spray pressures at or below 20 psi unless otherwise specified by the nozzle manufacturer.

**AERIAL APPLICATION:**
- Apply in a minimum spray volume of 3 gallons per acre. For optimum spray coverage and distribution, use a minimum of 5 gallons per acre and a maximum pressure of 40 psi. Use a boom and nozzle configuration which will provide a uniform deposition pattern and coverage with low drift potential. Avoid overlaps to prevent potential crop injury.
- Do not apply near sensitive crops or sensitive plants growing near the treated area. Do not apply when wind speed is greater than 10 mph or when winds are moving toward sensitive crops or plants. To avoid drift hazards, applicator must follow the most restrictive labeling of the products used in a tank-mix. Refer to the appropriate tank-mix partner’s label. For further precautions and additional instructions and recommendations, consult the tank-mix partner’s label.

**POST DIRECTED APPLICATION**
- Metribuzin 75 DF in tank-mix combinations with Banvel, 2,4-D, Buctril or Scorpion III may be applied post directed to field corn. Use drop nozzles and appropriate spacing to direct spray below the corn whorl and upper leaves. The top of the target weed canopy must be sufficiently below the whorl and upper leaves of the crop to permit this application and provide adequate spray coverage. The height differential required between the crop and weed canopy will depend on the specific equipment used. Apply before tassel emergence. For further precautions and additional recommendations, refer to the appropriate tank-mix partner’s label.

**ADJUVANTS**

- The adjuvant types listed below may be utilized with certain Metribuzin 75 DF tank-mix combinations. Consult the tank-mix recommendations section for the appropriate adjuvant and rate. Use of non-recommended adjuvants or rates may result in severe leaf burn, crop stunting, and/or stand reduction. Use only adjuvants which are exempt from tolerance requirements under 40 CFR 180.1001.
- **UAN (urea ammonium nitrate) is commonly referred to as 28, 30, or 32% N.**
- **Ammonium sulfate (spray grade) may be used as an alternative to UAN with certain tank-mix combinations.**
- **Nonionic surfactants should contain at least 80% active ingredient.**
- **DO NOT USE:** crop or concentrate (CCD) of any adjuvant containing vegetable or petroleum oils with any Metribuzin 75 DF tank-mixtures as severe leaf burn, crop stunting, and/or stand reduction may occur.
BURNDOWN WEED CONTROL - FIELD CORN

Metribuzin 75 DF can be used as part of a herbicide program for burndown of existing vegetation prior to crop emergence in conservation tillage systems. Metribuzin 75 DF may be tank-mixed with 2,4-D low volatile ester (LVE), Gramoxone Inteon, or Roundup/Roundup Ultra/Touchdown for control of emerged weeds prior to field corn emergence. Metribuzin 75 DF burndown tank-mixes can be applied before planting or prior to crop emergence in the following areas:

Field Corn: Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota, and Wisconsin.

Application: Metribuzin 75 DF may be applied up to 30 days prior to planting or pre-emergence. Apply only by ground equipment when Metribuzin 75 DF is used for burndown of existing vegetation in conservation tillage systems. Metribuzin 75 DF and tank-mix partner burndown rates are listed in the following three tables.

SPECIAL PRECAUTIONS: Do not apply these treatments after crop emergence. Observe all precautions and limitations on the labeling of all products used in tank-mixtures. Refer to the "Use Information" section of this label for additional information, precautions, and limitations.

Field Corn:
1. Do not apply on coarse textured soils with less than 1.5% organic matter.
2. Do not apply more than 4 oz of Metribuzin 75 DF per acre on soils with less than 2% organic matter.
3. Do not apply on soils having pH 7.0 or greater.
4. Do not apply more than 5-1/3 ounces Metribuzin 75 DF (0.25 pound active ingredient) per acre per growing season.
5. Corn seed should be planted a minimum of 1-1/2 inches deep.
6. Metribuzin 75 DF may only be used in hybrid seed corn production fields if both inbred parents are known to be tolerant to Metribuzin 75 DF.

FEEDING RESTRICTIONS: Corn treated with Metribuzin 75 DF may be harvested for silage or grain 60 days after treatment. Do not feed hay, forage, fodder or pasture 2,4-D, Select, or Fusion treated vegetation. Follow the most restrictive preharvest interval of all products used in a tank-mixture.

METRIBUZIN 75 DF PLUS TANK-MIX PARTNER BURNDOWN RATES - FIELD CORN

<table>
<thead>
<tr>
<th>PRODUCT</th>
<th>RATE</th>
<th>DIRECTIONS AND REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Metribuzin 75 DF + 2,4-D LVE</td>
<td>2 to 5-1/3 oz/A*</td>
<td>Apply at least 7 days preplant or at least 3 days after planting but before corn emergence.</td>
</tr>
<tr>
<td>Metribuzin 75 DF + Gramoxone Inteon</td>
<td>2 to 5-1/3 oz/A*</td>
<td>Must be applied prior to crop emergence. See Gramoxone Inteon label for amount to use in relation to weed height. Apply in 20 to 60 gallons of water per acre. Include either nonionic surfactant at 1 quart per 100 gallons (0.25% v/v) or crop oil concentrate at 1 gallon per 100 gallons (1% v/v) of spray solution.</td>
</tr>
<tr>
<td>Metribuzin 75 DF + Gramoxone Inteon + 2,4-D LVE</td>
<td>2 to 5-1/3 oz/A*</td>
<td>For this tank mix follow the Directions and Remarks Sections above for Metribuzin 75 DF + 2,4-D LVE and Metribuzin 75 DF + Gramoxone Inteon, paying special attention to crop planting restrictions with 2,4-D LVE. Include either nonionic surfactant or crop oil concentrate in this tank mix.</td>
</tr>
<tr>
<td>Metribuzin 75 DF + Roundup/Roundup Ultra or Touchdown</td>
<td>2 to 5-1/3 oz/A*</td>
<td>Must be applied prior to crop emergence. Use the higher rates as weeds approach the maximum weed heights listed in the &quot;Weeds Controlled&quot; section below. Apply in 10 to 20 gallons of water per acre. With Roundup and Touchdown, include nonionic surfactant at 2 quarts per 100 gallons (0.5% v/v) and ammonium sulfate (spray grade) at 17 pounds per 100 gallons of spray solution. With Roundup Ultra, include ammonium sulfate (spray grade) at 17 pounds per 100 gallons of spray solution. Any glyphosate formulation registered and labeled for use in field corn may be tank-mixed with Metribuzin 75 DF.</td>
</tr>
</tbody>
</table>

* If applied to field corn grown in Illinois, Indiana, Kentucky, Michigan, Minnesota, Ohio and Wisconsin, refer to Table 1 for correct Metribuzin 75 DF rate based on application timing.
Weeds controlled. Metribuzin 75 DF in tank-mixtures with the above herbicides will provide burndown control of the weeds listed below.

* Use 2,4-D LVE at 0.5 pound active ingredient per acre.
* Use a minimum Roundup/Roundup Ultra rate of 16 fl oz/A and a minimum Touchdown rate of 10.6 fl oz/A.
* Use Metribuzin 75 DF at 4 oz/A for optimum control.
* * Does not control triazine resistant biotypes.
* * * Suppression only.
RESIDUAL WEED CONTROL
Metribuzin 75 DF burndown programs can be used as part of a full season weed control program when, 1) applied as a tank-mixture with residual herbicides, or 2) followed with a postemergence weed control program, which is registered for use on the crop.

For residual control, Metribuzin 75 DF burndown programs may include tank-mixes with the following herbicides or combination of herbicides:

**Field Corn**

<table>

</tr>
<tr>
<td>or Propanil</td>
<td>1 pt/A</td>
<td>or Paraxyl</td>
</tr>
</tbody>
</table>

**SPRAYER CLEANUP**
Refer to the individual product labels for additional information, precautions, and limitations.

**RAINFASTNESS**
Metribuzin 75 DF will not reduce rainfastness of the recommended tank-mix partners. Refer to the individual product labels for rainfastness recommendations.

**SPECIAL PRECAUTIONS**
1. Do not use on corn grown for seed, sweet corn, popcorn, or white corn.
2. Do not apply more than 0.25 pounds a.i. metribuzin (5-1/3 ounces Metribuzin 75 DF) per acre per use season.
3. Do not apply when field corn is under stress (see Stress statement below).
4. Do not use aerial applications if sensitive crops or plants are growing in the vicinity of the area to be treated.
5. Do not allow spray drift onto sensitive crops or plants.
6. Do not use on sand, loamy sand or sandy loam soils that have less than 0.5% organic matter.
7. Do not use on sand or loamy sand soils in Washington, Oregon or Idaho or crop injury may occur.
8. Observe all precautions and limitations on labeling of all products used in the tank-mixtures.

**STRESS**
Stress is any condition or combination of conditions which impairs normal crop growth. Weather, disease, insect damage, fertility or other factors may cause stress. Applications made before or after the corn is under stress from these factors or from periods of prolonged cool, wet and cloudy weather or widely fluctuating day and nighttime temperatures, may result in temporary leaf burn, yellowing and/or stunting of the crop. Recovery from damage is generally rapid with no lasting effects on new growth. Under extreme stress, stand reductions may occur.

**Feeding Restrictions**: Field corn treated with Metribuzin 75 DF may be grazed or harvested for silage or grain 60 days after treatment. Follow the most restrictive preharvest interval on the labels of the products used in the tank-mixtures.

**TANK-MIX COMBINATIONS**
The Metribuzin 75 DF tank-mixtures listed below can be utilized for control of certain annual broadleaf weeds.
Occasional temporary corn leaf burn may occur and is similar to that observed from liquid fertilizers.

Application may cause injury to nearby sensitive crops or plants. Application may result in temporary leaning of corn plants. Delay cultivation until plants return to normal growth patterns to avoid stalk breakage.

Application may result in temporary leaning of corn plants. Delay cultivation until plants return to normal growth patterns to avoid stalk breakage.

* Consult the appropriate tank-mix partner’s label for additional recommendations or restrictions. The most restrictive labeling applies to tank-mixes with Metribuzin 75 DF.

** Application rate is based on, but not restricted to, 4 pounds active ingredient per gallon of 2,4-D.

### METRIBUZIN 75 DF POSTEMERGENCE BROADCAST DIRECTIONS

* When weeds are approaching the maximum height listed or found in high densities, use the higher rate of Metribuzin 75 DF and the selected tank mix partners.
* These treatments will not control triazine resistant biotypes.
* These treatments will not control ALS resistant biotypes.
PERENNIAL WEED SUPPRESSION

The following Metribuzin 75 DF tank-mixtures will provide top growth burndown and in season suppression of the following perennial weeds; however, regrowth may occur. For the best performance on these weeds, use the maximum allowable rates of Metribuzin 75 DF, Banvel, Buctril, Buctril + atrazine, Clarity, Marksman, 2,4-D LVE or Pursuit labeled for these tank-mixtures.

**Metribuzin 75 DF + Banvel or Clarity**
- Bindweed, field
- Dandelion, common
- Dock, curly
- Smartweed, swamp
- Thistle, Canada

- Dock, curly
- Smartweed, swamp
- Thistle, Canada

**Metribuzin 75 DF + Marksman**
- Thistle, Canada

**PREPLANT and PRE-EMERGENCE**

Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota and Wisconsin

Metribuzin 75 DF may be used for additional residual control of certain broadleaf weed species in corn when applied as a tank-mix combination with both grass and broadleaf herbicides registered and labeled for use in field corn. Metribuzin 75 DF can be tank-mixed with specified rates of the following herbicides:

<table>

* When weeds are approaching the maximum height listed or found in high densities, use the higher rate of Metribuzin 75 DF and the selected tank mix partners.
Application: Metribuzin 75 DF may be applied to field corn preplant without incorporation up to 30 days prior to planting or pre-emergence. Applications may be made by either ground or aerial equipment. For tank-mixes, follow the most restrictive application methods of all products used.

SPECIAL PRECAUTIONS:
1. Do not apply more than 5-1/3 ounces Metribuzin 75 DF (0.25 pound active ingredient) per acre per growing season.
2. Do not apply on soils having pH 7.0 or greater.
3. Corn seed should be planted a minimum of 1-1/2 inches deep.
4. Metribuzin 75 DF may only be used in hybrid seed corn production fields if both inbred parents are known to be tolerant to Metribuzin 75 DF.
5. Do not use on muck soils as reduced weed control may result.
6. Observe all precautions and limitations on labeling of all products used in tank-mixes.

Feeding restrictions: Corn treated with Metribuzin 75 DF may be harvested for silage or grain 60 days after treatment. For tank-mixes, follow the most restrictive preharvest interval of all products used.

Weeds controlled: Metribuzin 75 DF will aid in the residual pre-emergence control of the following weed species when tank-mixed with other registered grass and/or broadleaf corn herbicides:
- Horseweed/marestail
- Pigweed spp.
- Smartweed
- Pennsylvania Sunflower
- Ladysthumb
- Ragweed, common
- Sunflower
- Waterhemp, Tall

* For control of emerged weeds refer to the “Burndown Weed Control” section of the Metribuzin 75 DF label.

**METRIBUZIN 75 DF FIELD CORN RATE DIRECTIONS**

</tbody>
</table>

REMARKS: Apply as a broadcast spray prior to corn emergence from the soil. Do not apply Metribuzin 75 DF on coarse textured soils with less than 1.5% organic matter. Do not apply more than 4 oz Metribuzin 75 DF per acre on soils with less than 2.0% organic matter. For heavy weed infestations and/or early preplant applications, use the higher rates of Metribuzin 75 DF. Consult the label of herbicide tank-mix partners to determine proper use rates for the other product(s).

California, Idaho, Oregon, and Washington

Special Conditions of Sale for Use on Garbanzo Beans (Chickpeas): The following directions for use were developed under the direction of IR-4 (government minor crops use program). As such the testing was done independently from the testing program of Helena Chemical Company. Buyer is advised that Helena Chemical Company makes no assurances regarding satisfaction with the product and that to the extent consistent with applicable law all risks of crop injury or product performance are assumed by the Buyer.

Metribuzin 75 DF herbicide may be used as a pre-emergence application for the suppression of certain broadleaf weeds in garbanzo beans.

**WEEDS SUPPRESSED**
- Common Chickweed
- Dog Fennel (Mayweed)
- Henbit
- Pigweed
- Shepherdspurse
- Wild Mustard

* Suppression is a reduction in weed size and growth compared to a non-treated area in the same field. Metribuzin 75 DF used alone will not control triazine-resistant weed species.

**APPLICATION DIRECTIONS**

<table>
<thead>
<tr>
<th>CROP</th>
<th>METRIBUZIN 75 DF LB/Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Garbanzo beans</td>
<td>1/3 to 1/2</td>
</tr>
</tbody>
</table>

Apply specified dosage in a single pre-emergence application using 10 to 40 gallons of water per acre with ground spray equipment. Apply before or after planting but before crop emergence. Thorough incorporation, either by rainfall or by mechanical means, is essential for weed suppression. Under dry conditions, incorporate Metribuzin 75 DF into the top 1 to 2 inches of soil with spike harrows, or similar shallow incorporation equipment, then cross harrow to ensure uniform soil incorporation. Where soil surface is moist at the time of application and rain follows before weed emergence, a broadcast application should provide adequate weed suppression.

Use on coarse textured soils, sandy soils or any soil with less than 1.5% organic matter will likely cause crop injury. Use the higher rate on fine textured soils (high in clay or organic matter) and in fields with a history of high weed populations.

SPECIAL PRECAUTIONS: Crop injury may result if crop is under stress conditions caused by cold weather, poor soil fertility, disease or insect damage. Crop injury may result if application is followed by heavy rain. Avoid application of more than 1/2 inch of irrigation within one month after application of Metribuzin 75 DF, or crop injury may occur.

Do not use on clay knolls or poorly covered subsoils.
Metribuzin 75 DF herbicide may be used as a pre-emergence and postemergence application for the suppression of certain broadleaf weeds in lentils and peas.

<td>Prostrate Knotweed</td>
</tr>
</tbody>
</table>

* Suppression is a reduction in weed size and growth compared to a non-treated area in the same field.

**Pre-emergence application only

---

**LENTILS AND PEAS**

Metribuzin 75 DF herbicide may be used as a pre-emergence and postemergence application for the suppression of certain broadleaf weeds in lentils and peas.

**PRE-EMERGENCE APPLICATION:** Make a single pre-emergence application of Metribuzin 75 DF at 1/4 to 1/2 lb per acre per crop year. Apply in 10 or more gallons of water per acre with ground spray equipment or 5 or more gallons of water per acre with aerial spray equipment. Apply Metribuzin 75 DF before or after planting. Thorough incorporation, either by rainfall or by mechanical means, is essential for weed suppression. Under dry conditions, incorporate Metribuzin 75 DF into the top 1 to 2 inches of soil with spike hoes, or similar shallow incorporation equipment, then cross harrow to ensure uniform soil incorporation. Where soil surface is moist at the time of application and rain follows before weed emergence, a broadcast application should provide adequate weed suppression.

Use the higher rate on fine-textured soils (high in clay or organic matter) and in fields with a history of high weed populations.

**POSTEMERGENCE APPLICATION:** One postemergence application may be made per season. Use 1/6 to 1/3 lb of Metribuzin 75 DF per acre on lentils and spring peas. On winter peas, use 1/4 to 1/3 lb of Metribuzin 75 DF per acre. For suppression of day fennel, use 1/3 lb Metribuzin 75 DF per acre. Apply specified dosage in 20 or more gallons of water per acre with ground spray equipment or 5 or more gallons of water per acre with aerial spray equipment. Do not exceed 40 psi with ground spray equipment. Apply as a broadcast spray when weeds are small (less than 2 inches in height or diameter) and before crop is 6 inches tall.

Temporary chlorosis of the crop may occur. There is an added risk of crop injury if a postemergence application is made following a previous pre-emergence or post plant incorporated Metribuzin 75 DF application.

Do not apply over very moist soils or wet crop foliage. Do not apply postemergence applications within 3 days after periods of cool, wet, or cloudy weather or crop injury may occur.

Do not apply within 24 hours of treatment with other pesticides.

**SPECIAL PRECAUTIONS (all applications):** Do not apply more than 2/3 lb Metribuzin 75 DF per acre per year. Crop injury may result if crop is under stress conditions caused by cold weather, low fertility, disease or insect damage. Crop injury may also result if application is followed by heavy rain.

Do not use on coarse-textured soils, sandy soils or soils with less than 1.5% organic matter.

Do not apply to “Estin” lentils.

Do not use on clay knobby or poorly covered subsoils.

Do not apply on shallow seedings less than 2 inches deep (pre-emergence only).

Do not apply within 50 days of harvest of peas, or within 75 days of harvest of lentils. Do not graze or feed treated vines to livestock within 40 days after application.

Maintain continuous spray tank agitation to keep material in suspension. Avoid overlapping of spray swaths and shut off spray booms while turning, slowing or stopping, or crop injury will occur.

**NOTE:** This treatment may cause some chlorosis or minor necrosis. Because garbanzo bean varieties may vary in their susceptibility to Metribuzin 75 DF, determine crop tolerance prior to adoption as a field scale practice to prevent possible injury.

For additional precautions, restrictions, limitations, and sprayer cleanup information refer to the appropriate sections of this label.

---

**POTATOES**

Metribuzin 75 DF herbicide may be used in ground, aircraft or specified chemigation equipment as a pre-emergence and/or postemergence application to potatoes. Early maturing smooth skinned white and all red skinned varieties may be injured with postemergence applications. The varieties Atlantic, Bellchip, Centennial, Chipbelle and Shepody are sensitive to Metribuzin 75 DF. Avoid postemergence applications on these varieties. Pre-emergence applications on these varieties may cause crop injury under adverse weather conditions, on coarse soils, under high soil pH, with higher rates per acre and with mechanical incorporation.

**Ground Application:** Metribuzin 75 DF may be used with ground spray equipment applied as a pre-emergence and/or postemergence application to control the listed grass and broadleaf weeds in potatoes. Apply as a uniform broadcast spray at 20 or more gallons per acre.

**Aerial Application:** Metribuzin 75 DF may be applied in aerial spray equipment as a pre-emergence and/or postemergence application at 5 or more gallons per acre.

**Chemigation:** Metribuzin 75 DF may be applied pre-emergence and/ or early postemergence to potatoes using center pivot, solid set and lateral row systems. Apply specified dosage in 1/4 to 1/2 inch of water per acre (1/4 to 1/2 inch on sandy soil) as a continuous injection in self-propelled systems or apply in the last 10 to 30 minutes of the set in other systems. Be sure all the Metribuzin 75 DF has been flushed from the lines before shutting down the system.

**WEEDS CONTROLLED**

Metribuzin 75 DF applied to potatoes according to directions, will provide economic control of the following weeds. For optimum control, applications should be made before weeds are 1 inch tall. (See NOTE)
**Broadleaves**

- Carpetweed, common
- Cocklebur, common
- Jimsonweed
- Kochia

- Mustard, Indian
- Mustard, tansy
- Mustard, tumbler
- Mustard, wild
- Pennywaxx, red

- Pigweed, redroot
- Pigweed, smooth
- Ragweed, common
- Shepherdspurse

- Sicklepod
- Smartweed, Pennsylvania
- Sunflower, common

**Grasses**

- Barnyardgrass
- Crabgrass, large
- Crabgrass, smooth
- Foxtail, green
- Foxtail, pearl
- Johnsongrass, seeding
- Pennycress, field
- Signalgrass, broadleaf

**Weeds controlled with pre-emergence applications:**
1. Weeds controlled with postemergence applications.
2. Weeds requiring two applications for control.

---

**HARD-TO-CONTROL WEEDS**

Although Metribuzin 75 DF may not provide commercially acceptable control in every instance, it will suppress growth of the following weeds and reduce their competition with potato plants.

**Broadleaves**

- Kochia
- Purslane, common
- Barnyardgrass
- Nutsedge, yellow

**Grasses**

- Nightshade, hairy
- Sunflower, common

**NOTE:** Where triazine-resistant weeds are present, Metribuzin 75 DF alone may not provide adequate control.

---

**BROADCAST APPLICATIONS**

<table>
<thead>
<tr>
<th>CRP</th>
<th>METRIBUZIN 75 DF lb/acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potatoes</td>
<td>1/3 to 1-1/3</td>
</tr>
</tbody>
</table>

**PRE-EMERGENCE:** Apply specified dosage as a broadcast spray. Do not mechanically incorporate into soil. Use the 1/3 to 1/2 lb/acre rate for control of wild mustard (Brassica sp.) only. On sand soils or sensitive varieties, do not exceed 2/3 lb/acre.

**POSTEMERGENCE:** Apply specified dosage as a broadcast spray over the tops of potato plants. Use rates of 1/3 to 2/3 lb/acre for control of redroot pigweed and common lambsquarters. Apply the 2/3 lb/acre rate for control of other weeds listed on this label. On medium and heavy soils only, use 2/3 lb/acre per application for control of other weeds listed on this label and for suppression of hairy nightshade. Make the first application early in the season while weeds are still small. Allow at least 14 days before the second application. Do not apply after June 30 if treated land is to be planted to crops other than potatoes.

**SPLIT APPLICATIONS:** This product may be applied once pre-emergence and once postemergence as directed above. Do not exceed 1-1/3 lb total per acre per season.

**TANK-MIXES:** Metribuzin 75 DF may be tank-mixed with the following herbicides: Metolachlor, S-Metolachlor, Eptam, Prowl 3.3 EC and Matrix. In addition, three-way tank-mix combinations may be used for Metribuzin 75 DF plus Metolachlor, S-Metolachlor, Eptam or Prowl 3.3 EC plus Matrix when applied pre-emergence. Refer to each product’s label for precautionary statements, restrictions, application information and weeds controlled.

---

**Omni Brand Metribuzin 75 DF 25lb Book India 70506-103-5905 6156CR2 5/17/16 11:36 AM Page 20**
SPECIAL PRECAUTIONS (Potatoes):
Do not use Metribuzin 75 DF on potatoes in Kern County, California.
Do not apply more than a total of 1-1/3 lbs Metribuzin 75 DF per acre in a single crop season regardless of the method of application.
Postemergence applications may cause some chlorosis or minor necrosis. These symptoms may be more severe if seed-piece decay is occurring or if growing conditions favor crop stress.
Postemergence applications may be made only on russet or white skinned varieties that are not early maturing.
Potato varieties may vary in their response to herbicide applications. When using Metribuzin 75 DF for the first time on a particular variety, always determine crop tolerance before using on a field scale.
Do not apply Metribuzin 75 DF within 60 days of harvest.
Do not use air blast sprayers.
Do not apply to sweet potatoes or yams.
Do not plant sensitive crops such as onions, lettuce, cole crops and cucurbits during the next growing season following Metribuzin 75 DF application.
Certain spring and winter barley, and winter wheat varieties are sensitive to Metribuzin 75 DF (see that section of this label for sensitive varieties) and should not be planted during the next growing season unless the following cultural practices occur:
1. Potato vines left in rows as a result of harvest must be uniformly distributed over the soil surface prior to plowing and,
2. Plow with a moldboard plow to a depth sufficient to mix the upper 8 inches of soil.

SPECIAL PRECAUTIONS (Soybeans):
Injury to soybeans may occur when Metribuzin 75 DF is used under the following conditions:
1. When soils have a calcareous surface area or a pH of 7.5 or higher.
2. Due to the sensitivity of certain soybean varieties, Metribuzin 75 DF should not be used on Altona, AP 55, AP 71, Asgrow 6520, Burlan, Caker 102, Colcet 156, Dassel, G2, 3202, Gowan, Maple Amber, N8 1884, Paloma 350, Potou, Regal, Semmens, Terra-Vig 505, Terra-Vig 606, Tracy, Vansoy, and Vinton 81. Consult your Helena Chemical Company Representative or your seed supplier for information on the tolerance to Metribuzin 75 DF of newly released soybean varieties, prior to use of Metribuzin 75 DF.
3. When applied in conjunction with soil-applied organic phosphate pesticides.
4. Over application or boom overlapping may result in stand loss and soil residues.
5. Uneven application or improper incorporation can decrease the level of weed control and/or increase the level of injury.
6. When applied to any soil with less than 1/2% organic matter.
7. Soil incorporation deeper than specified.
8. When sprayers are not calibrated accurately.
9. When heavy rains occur soon after application, especially in poorly drained areas where water may stand for several days.
10. When soybeans are planted less than 1-1/2 inches deep, particularly in pre-emergence application.

Activation: A minimum amount of soil moisture is required to activate Metribuzin 75 DF. In areas of low rainfall, pre-emergence applications to dry soil should be followed with light irrigation of 1/4 acre inch of water. Do not apply heavy irrigation immediately after application. As with many surface-applied herbicides, weed control and crop tolerance may vary with rainfall and/or soil texture.

Grazing and Feeding Treated Vines: Treated vines may be grazed or fed to livestock 40 days after application when Metribuzin 75 DF is applied alone or with Treflan®, Metolachlor, S-Metolachlor, Prowl® or Lasso.
Do not use treated vines for feed or forage when Metribuzin 75 DF is applied with Sonalan, linuron plus Lasso, or linuron plus Metolachlor or S-Metolachlor.
Rate Ranges: Where a rate range is specified, use the lower rate on soils that are coarse-textured or low in organic matter. Use the higher rate on soils that are relatively fine-textured or high in organic matter.
Replanting: If replanting is necessary in fields treated with Metribuzin 75 DF as directed on this label, the field may be replanted to soybeans. When replanting, use a minimum of tillage is recommended. Do not apply a second treatment as injury to soybeans may occur.

SOYBEANS
(Except California)
Metribuzin 75 DF herbicide tank-mix combinations may be used for preplant incorporated applications, pre-emergence surface applications, Split-Shot application and Extended Split-Shot application. Metribuzin 75 DF may also be used as an overlay application following a preplant incorporated application of a recommended grass herbicide and alone as a pre-emergence surface application. All these applications can be applied with ground equipment, and some can be applied with aerial spray equipment. In addition, Metribuzin 75 DF can be applied as a postemergence directed spray to soybeans in certain states.

**METRIBUZIN 75 DF ALONE**

Metribuzin 75 DF (Alone) Pre-emergence Application: The following rates of Metribuzin 75 DF may be applied pre-emergence to soybeans through center pivot or lateral move sprinkler irrigation systems that apply water in a uniform manner. Refer to “Chemigation” section of this label for directions.

- **Lb of Metribuzin 75 DF Per Acre**
  - **ORGANIC MATTER**
    - Less than 2%
    - 2 to 4%
    - Over 4%
  - **COARSE SOILS**
    - (Sandy loam, loamy sand)
    - DO NOT USE
  - **MEDIUM SOILS**
    - (Silt loam, silty loam, sandy clay, sandy clay loam)
    - 1/2 to 2/3
    - 2/3 to 5/6
    - 5/6 to 1
  - **FINE SOILS**
    - (Silt loam, silty clay loam, clay loam)
    - 2/3 to 5/6
    - 5/6 to 1
    - 1 to 1-1/6
  - **Mississippi Delta Only**
    - 1
    - 1-1/6
    - 1-1/3

*For control of lambsquarters, redroot pigweed, and wild mustard, and for suppression of green, yellow and giant foxtails on alkaline (calcareous) soils in Nebraska, Minnesota, South Dakota, and North Dakota only, apply Metribuzin 75 DF at rates of 1/3 lb/acre on medium soils and 1/3 to 1/2 lb/acre on fine soils regardless of soil organic matter percentage (use 1/2 lb only where soil pH is less than 7.5 and weed pressure is heavy). The 1/3 lb/acre rate of Metribuzin 75 DF alone can be applied regardless of soil pH. For control of other weeds listed on this label use Metribuzin 75 DF at full rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.

† Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

‡ Refer to the appropriate section of this label for use of Metribuzin 75 DF on soybeans in coarse soils with 0.5% or more organic matter in certain states.
USES OF METRIBUZIN 75 DF HERBICIDE IN COMBINATION WITH OTHER HERBICIDES

SEQUENTIAL APPLICATION OF SCEPTER® FOLLOWING METRIBUZIN 75 DF

If needed, application of Metribuzin 75 DF alone or in a registered tank-mix according to directions on this label, may be followed by an early postemergence application of Scepter herbicide (1.5 bygal/liquid or 70 DF) for control of cocklebur. Apply 1/6 to 1/2 pint of Scepter (0.7 to 1.4 ounces of Scepter 70 DG) in a minimum of 20 gallons of water per acre. Use 1/6 pint of Scepter (0.7 ounce of Scepter 70 DF) if cockleburs are less than 3 inches tall or have fewer than 3 leaves and are actively growing. For cockleburs less than 6 inches tall and actively growing use 1/3 pint of Scepter (1.4 ounces of Scepter 70 DF) per acre. Do not use Scepter when soybeans or cockleburs have been subjected to stress conditions such as temperature or moisture extremes. Do not exceed a total of 2.5/3 pint of Scepter (2.8 ounces of Scepter 70 DG) per acre in one season. Wait at least 10 days after application of Scepter before cultivating. When preparing the spray mixture with Scepter, add 2 pt of nonionic surfactant approved for use on growing crops and containing at least 80% active ingredient per 100 gallons of mixture. Apply crop oil concentrate (COC) at the rate specified on the COC label.

Use Scepter in the states where it is registered as listed on the product label.

Apply Scepter at least 90 days before harvest of soybeans. Do not graze or feed soybean forage, hay, or straw to livestock.

Refer to the Scepter label for additional cautions and precautions, directions, limitations, and information on environmental hazards and planting of rotational crops.

SPLIT-SHOT APPLICATION

A preplant incorporated application of Metribuzin 75 DF tank-mixed with either Treflan, Lasso, Metolachlor, S-Metolachlor, Provisol or Sonalan and followed by a pre-emergence surface application of Metribuzin 75 DF alone after planting but prior to soybean emergence, will control more broadleaf and grass weeds in soybeans than when either herbicide is used alone. Refer to the Treflan, Lasso, Metolachlor, S-Metolachlor, Provisol or Sonalan labels, and to appropriate sections of this label for directions on soil preparation, herbicide application, incorporation techniques, herbicide rates, weed species controlled, and restrictions for using tank-mix combinations of Metribuzin 75 DF. Carefully observe the “Special Precautions” sections concerning the use of Metribuzin 75 DF in tank-mix combinations on soybeans. When a Split-Shot application of Metribuzin 75 DF with Prowl, Treflan, or Sonalan is used, the preplant incorporated tank-mix may be applied up to 21 days prior to planting soybeans; with Metolachlor, S-Metolachlor or Lasso, the preplant incorporated tank-mix may be applied up to 14 days prior to planting. On medium and fine textured soils with greater than 2% organic matter, a rate range is given for the Metribuzin 75 DF pre-emergence overlay application. The higher rate should be used in fields with a history of severe broadleaf weed pressure, (b) when the time between preplant incorporated tank-mix and pre-emergence overlay applications approaches the maximum stated above, and/or (c) when the organic matter content of the soil is at the upper end of the indicated range. For black nightshade control, refer to the appropriate sections of the Lasso, Metolachlor, S-Metolachlor, or Sonalan labels for specific instructions.

1 Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

* On coarse textured soils, do not use on sand soils with less than 1% organic matter, or on loamy sand or sandy loam soils with less than 1% organic matter.

** Use this lower rate of Metribuzin 75 DF in the preplant incorporated tank-mix on soils having a calcareous surface area or a pH of 7.5 or higher, and in those situations where soils within a field vary extremely in texture or organic matter content.

*** Use the pre-emergence application of Metribuzin 75 DF by 1/6 lb/acre when using SPLIT-SHOT application on soils with over 4% organic matter and which have a calcareous surface area or a pH of 7.5 or higher.

**EXCEEDS SPLIT-SHOT APPLICATION**

Includes No-Till, Reduced-Till, Ridge-Till, Strip-Till, Mulch-Till

An early preplant (surface-applied or shallow incorporated) application of Metribuzin 75 DF tank-mixed with either Metolachlor, S-Metolachlor or Lasso, followed by a pre-emergence surface application of Metribuzin 75 DF tank-mixed with Metolachlor, S-Metolachlor or Lasso after planting but prior to soybean emergence, will control more broadleaf and grass weeds in soybeans than either herbicide used alone.

An Extended SPLIT-SHOT application will decrease the need for tillage and/or contact herbicides for the control of existing vegetation prior to planting, while providing residual control of weeds after planting.
When an Extended SPLIT-SHOT application of Metribuzin 75 DF with Metolachlor, S-Metolachlor or Lasso is used, the preplant tank-mix combination may be applied 15 to 30 days prior to planting soybeans. Follow directions on the label accompanying the product for SPLIT-SHOT applications from 0 to 14 days before planting.

Where a rate range is given, the higher rates should be used (a) in fields with a history of severe weed pressure, (b) when the time between early preplant tank-mix and pre-emergence applications approaches the maximum 30 days, (c) when the organic matter content of the soil is at the upper end of the indicated range, (d) when heavy crop residues are present on the soil surface, and/or (e) when the early preplant tank-mix application is shallow incorporated (e.g. use 2 to 2-1/2 qt Lasso in the early preplant tank-mix when surface applied and use 2-1/2 to 3 qt Lasso when the tank-mix is to be lightly incorporated).

When weeds exceed 1 to 1-1/2 inches in height or diameter at application, use a contact herbicide, such as Roundup and use 2-1/2 to 3 qt Lasso when the tank-mix is to be lightly incorporated. Overlay applications approaches the maximum 30 days, (c) when the organic matter content of the soil is at the upper end of the indicated range, (d) when heavy crop residues are present on the soil surface, and/or (e) when the early preplant tank-mix application is shallow incorporated (e.g. use 2 to 2-1/2 qt Lasso in the early preplant tank-mix when surface applied and use 2-1/2 to 3 qt Lasso when the tank-mix is to be lightly incorporated).

For control of lambsquarters, redroot pigweed, wild mustard, and green and yellow foxtails on alkaline (calcareous) soils in Minnesota, Nebraska, South Dakota, and North Dakota, use Metribuzin 75 DF at rates of 1/3 lb/acre (1/6 lb/acre for corn) on highly eroded soils. Do not use on coarse soils with less than 1% organic matter. However, on coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on sand soils with less than 2% organic matter, or on loamy sand or sandy loam soils with less than 1% organic matter.

Use the lower rate of Metribuzin 75 DF in tank-mix combination with Sonalan regardless of soil pH. For control of other weeds not listed on the label, use Metribuzin 75 DF at full rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.

*Silly clay loam* soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

*On coarse textured soils, do not use on sand soil with less than 1% organic matter. However, on coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on sand soils with less than 2% organic matter, or on loamy sand or sandy loam soils with less than 1% organic matter.

*Use the lower rate of Metribuzin 75 DF in the early preplant tank-mix on soils having a calcareous surface area or a pH of 7.5 or higher, and in those rare situations where soils within a field vary extremely in texture or organic matter content.

### METROBIZIN 75 DF PLUS SONALAN

Metribuzin 75 DF plus Sonalan Overlay Applications: Metribuzin 75 DF may be applied as a pre-emergence overlay application following a preplant incorporated application of Sonalan 3 EC. Consult the Sonalan label for specific directions on use, recommendations, restrictions and any additional weeds not specified on this label.

Metribuzin 75 DF plus Sonalan Tank-mix Application: Incorporate the tank-mixture into the top 1 to 2 inches of soil within 21 days before planting according to label directions for Sonalan. Apply Metribuzin 75 DF plus Sonalan preplant incorporated if furrow irrigation is used or when a period of dry weather after application is expected. If soybeans are planted on beds, apply and incorporate the tank-mixture after bed formation.

**Mixing:** Refer to the "Use Information" section in the front of this label.

**Application:** Sonalan should be uniformly applied and thoroughly mixed into the soil within 2 days after application. For specific application information, refer to the "Application" under "Use Information" section in the front of this label.

**SPECIAL PRECAUTIONS:** Metribuzin 75 DF plus Sonalan: For additional precautions, restrictions, limitations, incorporation, and sprayer cleanup information, refer to the appropriate sections of this label and the Sonalan label.

**For black nightshade control, refer to the Sonalan label for specific rates and application instructions.**

*Do not use on coarse soils with less than 1% organic matter.

*Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

*For control of lambsquarters, redroot pigweed, wild mustard, and green and yellow foxtails on alkaline (calcareous) soils in Minnesota, Nebraska, South Dakota, and North Dakota only, apply Metribuzin 75 DF at rates of 1/3 lb/acre on medium soils and 1/3 to 1/2 lb/acre on fine soils regardless of soil organic matter percentage (use 1/2 lb only where soil pH is less than 7.5 and weed pressure is heavy). The 1/3 lb rate of Metribuzin 75 DF in tank-mix combination with Sonalan can be applied regardless of soil pH. For control of other weeds not listed on the label, use Metribuzin 75 DF at full rates specified in the table above.
Apply Metribuzin 75 DF plus Metolachlor or S-Metolachlor preplant incorporated if furrow irrigation is used or when a period of dry weather after application is expected. If soybeans are planted on beds, apply and incorporate the tank-mixture after bed formation.

Pre-emergence Application: Incorporate the tank-mixture into the top 2 inches of soil within 14 days before planting using a disk, harrow, rolling cultivator, or similar implement.

Pre-emergence Application: Dry weather following pre-emergence application of Metribuzin 75 DF plus Metolachlor or S-Metolachlor tank-mixture may reduce effectiveness. If weeds develop, cultivate uniformly with shallow tillage equipment such as a rotary hoe that will not damage soybeans.

Mixing: Refer to the "Use Information" section in the front of this label.

Incorporation Equipment:
1. Set PTO-driven equipment (tillers, cultivators, hoes) to cut 2 to 3 inches deep and spaced rotors to provide a clean sweep of the soil. PTO equipment should not be operated at a speed greater than 4 miles per hour.
2. Set disk to cut 4 to 6 inches deep and operate twice in different directions at 4 to 6 miles per hour.
3. Set mulch header and other similar disk type implements to cut 3 to 4 inches deep and operate twice in different directions at 5 to 8 miles per hour.

For Coarse and Medium Textured Soils Only:
1. Set disk to cut 4 to 6 inches deep and operate twice in different directions at 4 to 6 miles per hour.
2. Set PTO-driven equipment (tillers, cultivators, hoes) to cut 2 to 3 inches deep and operate twice in different directions at 4 to 6 miles per hour.

Special Precautions (Metribuzin 75 DF plus Treflan): Seedling disease, cold weather, excessive moisture, high salt concentration or drought may weaken soybean seedlings and increase possibility of damage from the tank-mix. Do not plant soybeans deeper than 2 inches.

SPECIAL PRECAUTIONS: Seedling disease, cold weather, excessive moisture, high salt concentration or drought may weaken soybean seedlings and increase possibility of damage from the tank-mix. Do not plant soybeans deeper than 2 inches.

In the Central United States, do not plant sorghum or oats for 12 months where the tank-mix has been applied unless 20 inches or more of irrigation and/or rainfall (total) was used to produce the crop. If less than 20 inches total water was used to produce the crop, do not plant either crop for 18 months after the tank-mix application. Cool, wet weather conditions during the early stage of growth may increase the possibility of injury to sorghum.

For additional precautions, restrictions, limitations and sprayer cleanup information refer to the appropriate section of this label. Do not use this tank-mix combination on soils containing charcoal in Arkansas, Louisiana and Mississippi.

1. Do not use on sand soils. Do not apply Metribuzin 75 DF plus Metolachlor or S-Metolachlor tank-mix preplant incorporated on sand or loamy sand with less than 2% organic matter or crop injury may occur.

2. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

---

**Special Precautions (Metribuzin 75 DF and Metolachlor or S-Metolachlor):**

For additional precautions, restrictions, limitations, and sprayer cleanup information refer to the appropriate sections of this label and the Metolachlor or S-Metolachlor label.

---

**Metribuzin 75 DF Plus Prowl**

**Overlay Application:** Apply a preplant incorporated treatment of Prowl as directed on that product label for use on soybeans. Follow with a pre-emergence treatment of Metribuzin 75 DF as directed on this label for use on soybeans.

**Tank-mix Application:**

#### Preplant Incorporated Application:

Prepare the soil by plowing or disking to mix previous crop residues into the soil to a depth of 4 to 6 inches. For specific application information refer to the "Use Information" section in the front of this label. Incorporate the tank-mixture into the top 1 or 2 inches of soil within 7 days after application according to label directions for Prowl. Mechanical incorporation is not required if a rain of one-quarter inch or more occurs within 7 days after application. Soybeans must be planted no later than 7 days after application of the tank-mixture.

#### Pre-emergence Application:

Except for minimum and no-tillage systems, the seed bed should be firm and free of trash and clods. For specific application information refer to the "Use Information" section in the front of this label. Do not apply Prowl pre-emergence north of Interstate 80. This application must be made after planting and before crop emergence. Do not incorporate.

If cultivation is necessary because of soil crusting, soil compaction or weed germination before rain or irrigation, use shallow tilling equipment such as a rotary hoe that does not damage soybeans.

**Mixing Instructions:** Refer to the "Use Information" section in the front of this label.

For information on applying Metribuzin 75 DF in fluid or dry fertilizer refer to the "Application Of Metribuzin 75 DF In Fluid Fertilizers" or "Commercial Impregnation And Application Of Metribuzin 75 DF On Dry Bulk Fertilizer" under the "Use Information" section in the front of this label.

1 Do not use on sand soils. Do not use on loamy sand or sandy loam containing less than 1% organic matter. Where a range of rates is shown for medium and fine soils, use the higher rate if heavy weed infestations are anticipated.

2 Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

Do not use on muck or peat soils.

#### SPECIAL PRECAUTIONS (Metribuzin 75 DF plus Prowl):

Soybean incorporation deeper than specified will reduce weed control and can result in crop injury.

For additional precautions, restrictions, limitations, and sprayer cleanup information, refer to the appropriate sections of this label and the Prowl label.

#### METRIBUZIN 75 DF PLUS LASO

**Metribuzin 75 DF plus Lasso Tank-mix Application:**

**PRE-EMERGENCE**

Metribuzin 75 DF may be used in a tank-mix combination with Lasso as a pre-emergence band or broadcast application to soybeans in accordance with the specified soil types and dosages specified.

For specific information regarding spray equipment, dilution rates, mixing, directions for use, methods of application, limitations and restrictions refer to the appropriate section of this label.

Refer to the Lasso label for pertinent recommendations, directions for use, restrictions and any additional weeds not specified on this label.

Do not use on muck soils.

#### TANK MIX APPLICATIONS

1. Do not use Metribuzin 75 DF plus Lasso on sand or loamy sand soils with less than 2% organic matter.
2. For control of lambsquarters, redroot pigweed, wild mustard, green and yellow foxtails on alkaline (calcareous) soils in Minnesota, Nebraska, South Dakota, and North Dakota only, apply Metribuzin 75 DF at rates of 1/3 lb/Acre on medium soils and 1/3 to 1/2 lb/Acre on fine soils regardless of soil organic matter percentage (use 1/2 lb only where soil pH is less than 7.5 and weed pressure is heavy). The 1/3 lb/Acre rate of Metribuzin 75 DF in tank-mix combination with Lasso can be applied regardless of soil pH. For control of other weeds use Metribuzin 75 DF at full rates specified in the table above, but note that crop injury may occur on soils having a calcareous surface area or a pH of 7.5 or higher.
3. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

PREPLANT INCORPORATED: For specific application information refer to the “Use Information” section in the front of this label.

Apply Metribuzin 75 DF plus Lasso preplant incorporated if furrow irrigation is used or when a period of dry weather after application is expected. If soybeans are planted on beds, apply and incorporate the tank-mix after bed formation. Apply within 7 days prior to planting and shallowly incorporate into the upper 1 to 2 inches of soil.

Do not use on muck soils.

1. Do not use Metribuzin 75 DF plus Lasso on sand or loamy sand soils with less than 2% organic matter.
2. Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

SPECIAL PRECAUTIONS (Metribuzin 75 DF plus Lasso): For additional precautions, restrictions, limitations and sprayer cleanup information, refer to the appropriate sections of this label and the Lasso label.

METRIBUZIN 75 DF PLUS COMMAND*

Metribuzin 75 DF may be applied in combination with Command 4EC as a preplant or shallow incorporated application for the control of certain weeds in soybeans. Consult the Command 4EC label for specific directions for use, recommendations, restrictions and any additional weeds not specified on this label.

Application: Metribuzin 75 DF plus Command 4EC may only be applied with ground equipment as a preplant or shallow incorporated application. Metribuzin 75 DF plus Command 4EC should be immediately incorporated into the top 1 to 3 inches after application unless surface is dry. On dry soils, incorporate into the top 1-3 inches within 3 hours of tank-mix application. Do not apply this tank-mix within 1000 feet of towns and subdivisions, commercial vegetable, fruit, nurseries or greenhouse operations.

NOTE: Off-site movement of Command spray drift or vapors can cause foliar whitening or yellowing of some vegetation. Prior to application of Command, read and strictly follow all precautions and application instructions as set forth in that label.

For additional information on application, refer to the “Use Information” section in the front of this label and the Command label.

---

**SPECIAL PRECAUTIONS (Metribuzin 75 DF plus Command):**

- Do not rotate to wheat, oats, barley, rye, alfalfa or seed corn in the fall of the year of application or in the spring of the following year as crop injury may occur.
- Do not apply when weather conditions favor drift. Do not use treated vines for feed or forage.
- Observe all cautions and limitations on labeling of all products used in mixtures.
- Do not apply aerially or through irrigation equipment.

**METRIBUZIN 75 DF PLUS CANOPY® PLUS A GRASS HERBICIDE**

A tank-mix combination of Metribuzin 75 DF plus Canopy 75 DF plus a registered and recommended grass herbicide (Metolachlor or S-Metolachlor, Lasso, Prowl, Sonalan or Treflan) may be used for control of the following weeds in soybeans:

**WEEDS CONTROLLED**

### Annual Broadleaves
- Bristly Starbur
- Carpetweed
- Cocklebur
- Copperleaf, Hophornbeam
- Florida Beggarweed
- Florida Pursley

### Annual Grasses
- Bittergrass
- Bluegrass
- Broadleaf signalgrass
- Brasspaw Millet

### WEEDS DISENGAGED
- Crabgrass
- Crowfootgrass
- Foxtails
- Goosegrass

### WEEDS NOT CONTROLLED
- Johnson grass (seedling)
- Junglegrass
- Parthenium, Fall
- Parthenium, Texas
- Sandbur
- Sprengetop
- Stinkgrass

Tank-mix combinations which include Metolachlor or S-Metolachlor, Lasso or Prowl can be applied pre-emergence broadcast or preplant incorporated broadcast. When Sonalan or Treflan are used in the tank-mix, apply preplant incorporated broadcast. Refer to the table below for specified rates of each product to be used in tank-mix combinations:

</table>

* Do not use on soils with a pH greater than 7.0.
* Refer to “Soil Texture” paragraph on this label for specific soil classification.
* Use the lower rate of Metribuzin 75 DF in preplant incorporated tank-mix as in those situations where soils within a field vary extremely in texture or organic matter content.
IMPORTANT: If weeds escape in fields treated with these tank-mix combinations, postemergence application of a registered and recommended herbicide will be needed for control. Refer to the “Use Information” section of this label for mixing and application directions.

SPECIAL PRECAUTIONS: For additional precautions, restrictions, limitations and sprayer cleanup information, refer to the appropriate sections of the labels for Metribuzin 75 DF and Canopy 75 DF. Do not use treated vines for feed or forage.

METRIBUZIN 75 DF PLUS COMMAND PLUS A GRASS HERBICIDE

Metribuzin 75 DF may be applied with Command 4EC and a grass herbicide (Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan) for the control of certain broadleaf weeds and grasses in soybeans. This combination will provide improved control of heavy infestations of velvetleaf, jimsonweed and common ragweed. Metribuzin 75 DF and Command 4EC plus a grass herbicide may be applied preplant incorporated broadcast. Consult the Command, Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan labels for specific directions for use, recommendations, restrictions and additional weeds controlled not specified on this label.

Mixing: Refer to the “Use Information” section in the front of this label.

Application: For specific application information, refer to the “Use Information” section in the front of this label.

* Refer to “Soil Texture” paragraph on this label for specific soil classification. On coarse textured soils with a calcareous surface area or a pH of 7.5 or higher, do not use on loamy sand or sandy loam soils with less than 1% organic matter.

**Metribuzin 75 DF and Command plus Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan will provide suppression (reduce the competition) of cocklebur and sunflower.**

**METRIBUZIN 75 DF PLUS SCEPTER PLUS A GRASS HERBICIDE**

Metribuzin 75 DF may be applied with Scepter herbicide and a grass herbicide (Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan) for the control of certain broadleaf weeds and grasses in soybeans. Metribuzin 75 DF and Scepter plus Treflan or Sonalan may be applied preplant incorporated broadcast. Metribuzin 75 DF and Scepter plus Lasso, Metolachlor, S-Metolachlor or Prowl may be applied preplant incorporated, pre-emergence broadcast or in a band application.

Mixing: Refer to the “Use Information” section in the front of this label.

Application: For specific application information, refer to the “Use Information” section in the front of this label.
Weeds Controlled: Metribuzin 75 DF plus Scepter plus Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan will control the following broadleaf weeds and grasses:

**Annual Broadleaves**
- Galinsoga
- Smartweeds
- Kochia
- Moringa, pitted
- Venice mallow
- Florida Pusley

**Annual Grasses**
- Barnyardgrass
- Kentucky Bluegrass
- Greenbottlegrass

Metribuzin 75 DF and Scepter plus Treflan, Lasso, Metolachlor, S-Metolachlor, Prowl or Sonalan will suppress (reduce the competition of) ivyleaf and tall morningglory, and red rice.

* For control of grass weeds, include Metolachlor, S-Metolachlor, Lasso, Prowl, Sonalan or Treflan at label rates in the tank-mix with Metribuzin 75 DF and Pursuit herbicides.

Restrictions and Limitations: Do not apply this tank-mix with aerial or irrigation equipment. Do not apply when weather conditions favor drift, or allow sprays to drift onto adjacent desirable plants. Do not use treated vines for feed or forage. Refer to appropriate sections of the Pursuit herbicide label for restrictions on use area and rotational crops. Observe all cautions and limitations on the labeling of all products used in mixtures.
Metribuzin 75 DF may be tank-mixed with Pursuit Plus herbicide for broadcast pre-emergence or preplant incorporated application to soybeans for control of certain broadleaf and grass weeds. Refer to the Pursuit Plus herbicide label for additional directions for use, recommendations, restrictions and limitations not included on this label.

**Mixing and Application:** Refer to the “Use Information” section of this label for directions on mixing and application of Metribuzin 75 DF.

### Restrictions and Limitations:
- Do not apply this tank-mix with aerial or irrigation equipment.
- Do not apply when weather conditions favor drift, or allow sprays to drift onto desirable plants.
- Do not use treated vines for feed or forage.
- Refer to appropriate sections of the Pursuit Plus herbicide label for restrictions on use area and rotational crops.

### METRIBUZIN 75 DF PLUS LINURON PLUS (LASSO, METOLACHLOR OR S-METOLACHLOR)

Metribuzin 75 DF may be applied in combination with Linuron 50 DF or 4L and Lasso 4, Metolachlor or S-Metolachlor as a pre-emergence application for the control of certain weeds in soybeans. Consult the Linuron, Lasso, Metolachlor or S-Metolachlor labels for specific directions for use, recommendations, restrictions and any additional weeds not specified on this label.

**Mixing:** Refer to the “Use Information” section in the front of this label.

**Application:** Applications can be made only with ground spray equipment in accordance with specified soil types and dosage rates. For specific application information, refer to the “Use Information” section in the front of this label.

* Do not use Metribuzin 75 DF plus Linuron plus (Lasso, Metolachlor or S-Metolachlor) on sand soils with less than 1% organic matter.
* Silty clay loam soils are transitional soils and may be classified as medium textured soils in some regions of the U.S.

### SPECIAL PRECAUTIONS (Metribuzin 75 DF plus Linuron plus [Lasso, Metolachlor or S-Metolachlor]):
For additional precautions, restrictions, limitations, and sprayer cleanup information, refer to the appropriate sections of this label and the Linuron label and the Lasso, Metolachlor or S-Metolachlor labels.

Metribuzin 75 DF herbicide may be used alone or in combination with Treflan, Lasso, Metolachlor or S-Metolachlor for use in coarse-textured, low organic matter soils in the states listed above for the control of certain weeds in soybeans. Refer to the appropriate sections of this label and the Treflan, Lasso, Metolachlor or S-Metolachlor labels for specific directions for use, recommendations, restrictions and any additional weeds not specified on this label.

**Mixing:** Refer to the “Use Information” section in the front of this label.

**Application:** For specific application information, refer to the “Use Information” section in the front of this label.

For additional precautions, restrictions, limitations and sprayer cleanup information, refer to the appropriate sections of this label and the Treflan, Lasso, Metolachlor, S-Metolachlor, Surflan or Amiben labels.

BURNDOWN WEED CONTROL – SOYBEANS

Metribuzin 75 DF can be used as part of a herbicide program for burndown of existing vegetation prior to crop emergence in conservation tillage systems. Metribuzin 75 DF may be tank-mixed with 2,4-D low volatile ester (LVE), Gramoxone Inteon, or Roundup/Roundup Ultra/Touchdown for control of emerged weeds prior to soybean emergence. Metribuzin 75 DF tank-mixes with 2,4-DB, Fusion, Post Plus or Select may also be used in soybeans for control of emerged weeds prior to crop emergence. Metribuzin 75 DF burndown tank-mixes can be applied before planting or prior to crop emergence in the following areas:

Soybeans:
All areas for all products except Fusion tank-mixes — see Fusion section of this label for allowed states.

Application: Metribuzin 75 DF may be applied up to 30 days prior to planting or pre-emergence. Apply only by ground equipment when Metribuzin 75 DF is used for burndown of existing vegetation in conservation tillage systems. Metribuzin 75 DF and tank-mix partner burndown rates are listed in the following three tables.

SPECIAL PRECAUTIONS: Do not apply these treatments after crop emergence. Observe all precautions and limitations on the labeling of all products used in tank-mixtures. Refer to the "Use Information" section of this label for additional information, precautions, and limitations.

Soybeans:
1. Apply only 2,4-D low volatile ester formulations which are registered and labeled for preplant or burndown use in soybeans.
2. Do not apply tank-mixtures containing 2,4-D LVE if wind is blowing toward desired susceptible plants (i.e., cotton, tobacco, tomato, etc.) or when wind speeds exceed 6 miles per hour.

FEEDING RESTRICTIONS: Soybean vines or hay treated with Metribuzin 75 DF may be grazed or fed to livestock 40 days after application. Do not feed hay, forage, fudder or graze 2,4-D, Select, or Fusion treated vegetation. Follow the most restrictive preharvest interval of all products used in a tank-mixture.
Metribuzin 75 DF + 2,4-D LVE
2 to 5-1/3 oz/A + 1/4 to 1 lb ai/A
Apply at least 7 days preplant when using 2,4-D LVE at 1/4 to 1/2 lb ai/A and at least 30 days preplant with rates greater than 1/2 lb ai/A. Include crop oil concentrate (COC) at the rate of 1 gal/100 gal of spray solution (1% v/v).

Metribuzin 75 DF + 2,4-DB
2 to 5-1/3 oz/A + 1/8 to 7/32 lb ai/A
Apply preplant or before soybean emergence. Include nonionic surfactant at 2 quarts per 100 gallons (0.5% v/v) of spray solution.

Metribuzin 75 DF + Fusion + 2,4-D LVE
2 to 5-1/3 oz/A + 4 to 8 fl oz/A + 1/4 to 1 lb ai/A
For use only in Delaware, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Pennsylvania, South Dakota, Virginia, West Virginia, and Wisconsin. For this tank mix follow the planting restrictions under the Directions and Remarks Section above for Metribuzin 75 DF + 2,4-D LVE. Fusion rates of 4, 6 and 8 ounces will control certain grasses up to 2, 4 and 6 inches in height, respectively. Include either crop oil concentrate at 1 gallon per 100 gallons (1.0% v/v) or nonionic surfactant at 1 to 2 quarts per 100 gallons (0.25 to 0.5% v/v) of spray solution. Refer to the Fusion label for additional information.

Metribuzin 75 DF + Gramoxone Inteon + 2,4-D LVE
2 to 5-1/3 oz/A + 32 to 64 fl oz/A + 1/4 to 1 lb ai/A
Must be applied prior to crop emergence. See Gramoxone Inteon label for amount to use in relation to weed height. Apply in 20 to 60 gallons of water per acre. Include either nonionic surfactant at 1 quart per 100 gallons (0.25% v/v) or crop oil concentrate at 1 gallon per 100 gallons (1% v/v) of spray solution.

Metribuzin 75 DF + Roundup/Roundup Ultra + 2,4-D LVE
2 to 5-1/3 oz/A + 8 to 16 fl oz/A + 1/4 to 1 lb ai/A
For this tank mix follow the planting restrictions under the Directions and Remarks Section above for Metribuzin 75 DF + 2,4-D LVE. The 8 and 12 fl oz rate of Poast Plus will control certain grasses up to 2 and 3 inches in height, respectively. Include either crop oil concentrate at the rate of 1 gallon per 100 gallons of spray solution (1% v/v) or Dash HC at 1 pint per acre. Refer to the Poast Plus label for additional information.

Metribuzin 75 DF + Roundup/Roundup Ultra + Touchdown + 2,4-D LVE
2 to 5-1/3 oz/A + 8 to 16 fl oz/A + 1/4 to 1 lb ai/A
For this tank mix follow the planting restrictions under the Directions and Remarks Section above for Metribuzin 75 DF + 2,4-D LVE. Use the adjuvant directions under the Metribuzin 75 DF + Roundup/Roundup Ultra/Touchdown tank mix. Do not use crop oil concentrate.

Metribuzin 75 DF + Select + 2,4-D LVE
2 to 5-1/3 oz/A + 3 to 4 fl oz/A + 1/4 to 1 lb ai/A
For this tank mix follow the planting restrictions under the Directions and Remarks Section above for Metribuzin 75 DF + 2,4-D LVE. The 3 and 4 fluid ounce rates of Select will control certain grasses up to 3 and 4 inches in height, respectively. Include crop oil concentrate at the rate of 1 quart per acre and 28% UAN (urea ammonium nitrate) at a rate of 1 to 2 quarts per acre. Refer to the Select label for additional information.
Weeds controlled. Metribuzin 75 DF in tank-mixtures with the above herbicides will provide burndown control of the weeds listed below.

### WEEDS CONTROLLED BY BURNDOWN RATES OF METRIBUZIN 75 DF

* Use 2,4-D LVE at 0.5 pound active ingredient per acre.
* Use a minimum Roundup/Roundup Ultra rate of 16 fl oz/A and a minimum Touchdown rate of 10.6 fl oz/A.
* Use Metribuzin 75 DF at 4 oz/A for optimum control.
* Suppression only.
* Does not control triazine resistant biotypes.
RESIDUAL WEED CONTROL
Metribuzin 75 DF burndown programs can be used as part of a full season weed control program when, 1) applied as a tank-mixture with residual herbicides, or 2) followed with a postemergence weed control program, which is registered for use on the crop. For residual control, Metribuzin 75 DF burndown programs may include tank-mixes with the following herbicides or combination of herbicides:

**Soybeans**

*S Metribuzin 75 DF used (alone and in tank-mixes) on soybeans at higher labeled rates than those listed for burndown weed control will also provide residual control of those weeds listed in the "Weeds Controlled by Metribuzin 75 DF and Metribuzin 75 DF Tank-mix Combinations" section of the Metribuzin 75 DF label.

Refer to the individual product labels for additional information, precautions, and limitations.

SOUTHERN AND SOUTHEASTERN STATES ONLY

POSTEMERGENCE DIRECTED SPRAY APPLICATIONS
Metribuzin 75 DF can be applied in postemergence directed sprays to soybeans for control of certain weeds which escape preplant or pre-emergence herbicide applications and for control of additional flushes of weeds that may occur after soybeans have emerged. Postemergence directed sprays of Metribuzin 75 DF can be applied to soybeans in addition to a pre-emergence or preplant application of Metribuzin 75 DF herbicide according to label directions.

WEEDS CONTROLLED: Metribuzin 75 DF, applied postemergence to soybeans as a directed spray according to directions on this label, will control the following at rates shown (broadcast basis) when grasses and common ragweed are less than 1 inch tall and other broadleaves are less than 3 inches tall:

**1/3 Lb/Acre**

- Carpetweed (Mollugo verticillata)
- Cocklebur (Xanthium pensylvanicum)
- Crabgrass (Digitaria spp.)
- Dayflower (Commelina sp.)
- Florida beggarweed (Euphorbia lathyroides)
- Mexicanweed (Dichondra argentea)

**1/3 to 2/3 Lb/Acre**

- Pigweeds (Amaranthus spp.)
- Purslane (Portulaca oleracea)
- Palmweed (Paspalum notatum)
- Prickly sida/Teaweed (Sida spinosa)
- Sesbania (Sesbania spp.)

**2/3 Lb/Acre**

- Common ragweed (Ambrosia artemisiifolia)
- Euphorbia maculata
- Ipomoea spp.
- Solanum spp.
- Richardia scabra

At the rate of 2/3 lb/acre morning glory species, (Ipomoea spp.) horsemint (Solanum spp.) Florida pursely (Richardia scabra) spotted spurge (Euphorbia maculata) and wild poinsettia (Euphorbia heterophylla) are suppressed when Metribuzin 75 DF is applied before these weeds are 3 inches tall. The 2/3 lb/acre rate will suppress broadleaf signalgrass (Brachiaria distortionis) up to 1 inch tall.

**METRIBUZIN 75 DF POSTEMERGENCE DIRECTED SPRAY APPLICATIONS**

<table>
<thead>
<tr>
<th>CROP</th>
<th>Metribuzin 75 DF Lb/Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Soybeans (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, and Texas)</td>
<td>1/3 to 2/3 (Broadcast Basis)</td>
</tr>
</tbody>
</table>

Apply proper dosage using 10-50 gallons of water per acre as a directed spray in a 6 to 8 inch band on each side of the row after soybeans are 8 inches tall and before broadleaf weeds are 3 inches tall and before grasses and common ragweed are 1 inch tall. For best results the spray must cover weed foliage with minimum or no contact with soybean foliage. Add a nonionic surfactant such as Ortho X-77 to the spray mixture to obtain better settling of weed leaf surfaces. To determine the correct dosage of Metribuzin 75 DF for a band application see “Banded Application” under the “Use Information” section in the front of this label.

If necessary, a second postemergence directed spray application can be made after 7 days. Do not feed or graze green soybean vines. Do not harvest soybeans or use dry soybean vines for feed or forage within 70 days of last application.

**SPECIAL PRECAUTIONS (Directed Postemergence):** Do not apply directly to soybeans or serious crop injury will occur. Do not allow spray to contact more than the lower 1/4 to 1/3 of soybean plants. Soybean leaves contacted by the spray will be killed.

Do not apply Metribuzin 75 DF postemergence to sensitive soybean varieties. See “Special Precautions” in the front of this label.

To avoid injury to other crops or desirable plants from spray drift, sprayer pressure must not exceed 30 psi and the sprayer must be fitted with nozzles no smaller than 8002 T-Jet (or equivalent). Do not apply under weather conditions which favor drift.
**SPECIAL PRECAUTIONS:** Crop injury may occur if Metribuzin 75 DF is applied:

1. When the crop is under stress such as winter kill, frost damage, disease, drought or excessive moisture, severe grazing, or when these conditions follow the application.
2. In combination with fluid fertilizer especially with the addition of surfactant.
3. Prior to the growth stage specified on this label.
4. To soils high in lime or sodium, a pH greater than 7.7, calcareous, gravelly, thinly covered or exposed subsoil areas.
5. To fields where seeds have been planted less than 1 inch deep.
6. To a non-winter hardy wheat or barley variety.
7. To a sensitive wheat or barley variety as listed below.
8. To frozen soil or crop still in winter dormancy.

**Feeding Restrictions:** Do not graze wheat within 14 days of Metribuzin 75 DF application or harvest grain within 21 days after last application. Do not graze or harvest barley before crop maturity. For tank-mix combinations, follow the most restrictive label.

**SPECIAL PRECAUTIONS:** Crop injury may occur if Metribuzin 75 DF is applied:

1. When the crop is under stress such as winter kill, frost damage, disease, drought or excessive moisture, severe grazing, or when these conditions follow the application.
2. In combination with fluid fertilizer especially with the addition of surfactant.
3. Prior to the growth stage specified on this label.
4. To soils high in lime or sodium, a pH greater than 7.7, calcareous, gravelly, thinly covered or exposed subsoil areas.
5. To fields where seeds have been planted less than 1 inch deep.
6. To a non-winter hardy wheat or barley variety.
7. To a sensitive wheat or barley variety as listed below.
8. To frozen soil or crop still in winter dormancy.

Spring and Winter Barley and Winter Wheat Rotations Following Potatoes Treated with Metribuzin 75 DF:

- For dryland winter wheat (non-irrigated), apply the highest specified rate to achieve maximum weed suppression/control.

Use these rates on crops with secondary roots smaller than 1 inch. For dryland winter wheat (non-irrigated), apply the highest specified rate to achieve maximum weed suppression/control.

**POSTEMERGENCE BROADCAST APPLICATIONS OF METRIBUZIN 75 DF**

<table>
<thead>

</tr>
</tbody>
</table>

Do not apply within 2 weeks after grazing or breaking of winter dormancy. Apply after the crop is at or beyond the 3 tiller growth stage but before jointing. Secondary roots should be developed and larger than 1 inch long. Do not apply before 75 days after planting. For dryland winter wheat (non-irrigated), apply the highest specified rate to achieve maximum weed suppression/control.

GEORGIA ONLY: Wheat must be planted before November 15 in the Piedmont area and Northern part of the state, and before December 1 in the Coastal Plain area.
WHEAT AND BARLEY VARIETAL TOLERANCE*

Wheat and barley varieties vary in their tolerance to Metribuzin 75 DF. Varieties below are tolerant to and are recommended for use with Metribuzin 75 DF:

Barley Advance, Boyer, Clark, Company, Hannchen, Hector, Hesk, Hudson, Lud, Luther, Kamiak, Klages, Olympic, Pirlene, Stepnue and Triumph.

The following cereals are sensitive to Metribuzin 75 DF and are not recommended for use:

**Spring/Durum Wheat:** Avoid use on Spring wheat and Durum wheat varieties.

**Barley:** Glenn, Morex, Moravian 3, Larker, Summit, Bracken, Anheuser Busch 32601 and varieties with Morex parentage.

Varieties Not Listed: To avoid possible crop injury on any variety not mentioned in this label, contact a Helena Chemical Company representative or herbicide expert for a variety recommendation prior to treatment or treat a small strip of the unlisted variety with the labeled Metribuzin 75 DF rate to ascertain crop tolerance before treating an entire field.

**WEEDS SUPPRESSED**

Metribuzin 75 DF control of the following weeds varies from poor to excellent depending on time of application, stage of growth at application, temperatures and soil moisture conditions following treatment. For maximum effect on these weeds, apply the highest labeled rate at the earliest growth stage timing for each particular soil type and organic matter. Suppression is a reduction in weed size and growth as compared to a non-treated area in the same field.

**FOR WEED CONTROL IN A WHEAT/FALLOW/WHEAT ROTATION**

<table>
<thead>
<tr>
<th>Details</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Fallow period after wheat harvest or in the Spring before winter wheat is planted. Winter wheat can be seeded 4 months after application. Mechanical tillage or the application of a contact herbicide may be required to control weeds germinating prior to seeding of winter wheat. Best results will be obtained where straw and chaff are evenly distributed across the field. For specific application information see the “Use Information” section in the front of this label. Where weed growth is present at application time, Metribuzin 75 DF should be applied with Gramoxone or other contact herbicide. Refer to the other product label registered for additional directions, rates, and weed species controlled.</td>
</tr>
</tbody>
</table>
### WEEDS CONTROLLED

#### Broadleaves
- Chickweed, Common (Stellaria media)
- Henbit (Lamium amplexicaule)
- Kochia (Kochia scoparia)
- Lambsquarters (Chenopodium album)
- Mustard, Blue or Purple (Chorispora tenella)
- Mustard, Jim Hill (Sisymbrium altissimum)
- Mustard, Tansy (Descurainia pinnata)
- Mustard, Treacle (Erysimum repandum)
- Russian Thistle (Salsola iberica)
- *Russian Thistle (Salsola iberica)*

#### Grasses
- Cheatgrass (Bromus secalinus)
- Downy Brome (Bromus tectorum)
- Pigweeds (Amaranthus spp.)
- *Wheat, Volunteer (Triticum spp.)*
- *Note:* Since control of these weeds may vary depending on moisture following application, use the higher rate specified below.

---

**After Harvest Application (Fall Fallow):** Metribuzin 75 DF may be applied to wheat stubble after harvest. Apply 3/4 to 5/6 lb per acre broadcast before weeds emerge. Use the higher rate for longer weed control or for weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

Do not plant crops in treated areas for at least 10 months following Fall applications.

**Spring Application (Summer Fallow):** Metribuzin 75 DF may be applied to the stubble in the Spring. Apply 1/2 to 2/3 lb per acre broadcast before weeds emerge in the Spring. Use the higher rate for longer weed control or weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

**Precautions and Restrictions:**
- Do not graze treated fields.
- Do not plant Spring seeded cereals following Fall fallow applications of Metribuzin 75 DF.

**FOR WEED CONTROL IN A FALLOW ROTATION WITH BARLEY AND WHEAT (Colorado, Kansas, Montana, Nebraska, and Wyoming Only):** Metribuzin 75 DF may be applied to provide weed control during the fallow period after wheat or barley harvest or in the Spring before planting of Winter wheat or barley. Mechanical tillage or the application of a contact herbicide may be required to control weeds germinating prior to seeding of Winter wheat or barley.

For specific application information see the “Use Information” section in the front of this label.

Where weed growth is present at application time, Metribuzin 75 DF should be applied with Gramoxone, Roundup, or other contact herbicide. Refer to the other product label registered for additional directions, rates, and weed species controlled. Do not plant crops in treated areas for at least 10 months following Fall applications.

---

**WEEDS CONTROLLED**

#### Broadleaves
- Chickweed, Common (Stellaria media)
- Coecake (Cucurbita pepo)
- Henbit (Lamium amplexicaule)
- Kochia (Kochia scoparia)
- Lambsquarters (Chenopodium album)
- Mustard, Blue or Purple (Chorispora tenella)
- Mustard, Jim Hill (Sisymbrium altissimum)
- Mustard, Tansy (Descurainia pinnata)
- Mustard, Treacle (Erysimum repandum)
- Pigweeds (Amaranthus spp.)
- Russian Thistle (Salsola iberica)
- *Wild Sunflower (Helianthus spp.)*

#### Grasses
- Cheatgrass (Bromus secalinus)
- Downy Brome (Bromus tectorum)
- Pigweeds (Amaranthus spp.)
- *Wheat, Volunteer (Triticum spp.)*

**Note:** Since control of these weeds may vary depending on moisture following application, use the higher rate specified below.

---

**AFTER HARVEST APPLICATION (Fall Fallow):** Metribuzin 75 DF may be applied to the stubble after harvest in the Fall. Apply 3/4 to 5/6 lb per acre broadcast before weeds emerge. Use the higher rate for longer weed control or for weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation.

**SPRING APPLICATION (Summer Fallow):** Metribuzin 75 DF may be applied to the stubble in the Spring. Apply 1/2 to 2/3 lb per acre broadcast before weeds emerge in the Spring. Use the higher rate for longer weed control or weeds designated as requiring the higher rate for control. Rainfall (1/2 inch or more) is necessary for herbicide activation. Wheat or barley can be seeded 120 days after Spring application.

**Precautions and Restrictions:**
- Do not graze treated fields.
- Do not plant Spring seeded barley following Fall applications for fallow.

Where Metribuzin 75 DF was applied in the Fall, do not apply Metribuzin 75 DF in the Spring.
**SUGARCANE (Florida Only)**

Postemergence over-the-top or directed spray applications of Metribuzin 75 DF may be used for the control of the following weeds in sugarcane in Florida.

<table>
<thead>
<tr>
<th>Broadleaves</th>
<th>Grasses</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>(Gnaphalium spp.)</td>
<td>Foxtail, bristlegrass (Setaria magna)</td>
</tr>
</tbody>
</table>

**Metribuzin 75 DF PLUS Atrazine TANK-MIX:** Metribuzin 75 DF may be used with atrazine as a pre-emergence or postemergence (before row closing) application to sugarcane. Rates for Metribuzin 75 DF are 1 to 2-2/3 lb/acre and atrazine 80% WP (4L) are 2-1/2 to 5 lb/acre (2 to 4 qt/acre). For additional information on precautions, instructions, limitations, application, and weeds controlled, refer to this label and the atrazine label.

**SPECIAL PRECAUTIONS (Florida only):**
- Do not use more than 2-2/3 lb per acre in a single growing season.
- Do not use on sand soils.
- Spray contact with sugarcane foliage may result in minor leaf margin chlorosis and/or necrosis.
- Do not apply within 60 days of harvest.
- Do not use treated crop for feed or forage.
- Avoid spray overlaps or variations in application speed that may result in insufficient or excessive rates of application.

---

**SUGARCANE (Louisiana and Texas Only)**

Pre-emergence and postemergence applications of Metribuzin 75 DF with aerial or ground spray equipment may be used for control of the following weeds in sugarcane in Louisiana and Texas:

<table>
<thead>
<tr>
<th>Broadleaves</th>
<th>Grasses</th>
</tr>
</thead>
<tbody>
<tr>
<td>Amaranth, Spiny (Amaranthus spinosus)</td>
<td>Broadleaf Signalgrass (Brachiaria platyphylla)</td>
</tr>
<tr>
<td>Bidens, Field (Bidens pilosa)</td>
<td>Crabgrass (Digitaria spp.)</td>
</tr>
<tr>
<td>Chickweed (Stellaria media)</td>
<td>Johnsongrass, Seedling (Sorghum halepense)</td>

</tr>
</tbody>
</table>

**Metribuzin 75 DF**

<table>
<thead>
<tr>
<th>Lb/Acre</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-1/3 to 2-2/3</td>
<td>GROUND APPLICATION: Metribuzin 75 DF may be used in one or two applications with a minimum of 14 days between each application. Apply when weeds are less than 6 inches tall in 10 to 40 gallons of spray mixture per acre. POSTEMERGENCE BROADCAST OR BAND: Apply over the top of stubble or plant cane while sugarcane is less than 14 inches tall. POSTEMERGENCE DIRECTED SPRAY: Apply to sugarcane that is a minimum of 14 inches tall and before row closing.</td>
</tr>
<tr>
<td>1-1/3 to 2</td>
<td>AERIAL APPLICATION: Apply when weeds are less than 4 inches tall in 5 to 10 gallons of spray mixture per acre. Apply to stubble or plant cane while the sugarcane is less than 14 inches tall.</td>
</tr>
</tbody>
</table>

**Special Precautions (Louisiana and Texas only):**
- Do not use treated foliage for feed or forage.
- Use the higher rate on heavy clay soil and soil with a high percentage of organic matter. If necessary, a third application may be made in late Spring at layby. Do not apply within 60 days of harvest.
- Do not apply more than 2-2/3 lb per acre in a single growing season. Do not use on sand soils.
- Spray contact with sugarcane foliage may result in minor leaf margin chlorosis and/or necrosis.
- Do not apply within 60 days of harvest.
- Do not use treated crop for feed or forage.
- Avoid spray overlaps or variations in application speed that may result in insufficient or excessive rates of application.

---

**SUGARCANE (FLORIDA ONLY) APPLICATION DIRECTIONS**

<table>

</tbody>
</table>

**METRIBUZIN 75 DF**

<table>
<thead>
<tr>
<th>Lb/Acre</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 to 4</td>
<td>BROADCAST: Apply specified dosage per acre using 20 to 50 gallons of water with ground equipment or 5 gallons of water with aircraft spray equipment. Apply as a broadcast spray during the Fall after planting or to the stubble after harvest. Make a second application early in the Spring.</td>
</tr>
<tr>
<td>1 to 2</td>
<td>BAND: Apply specified dosage in 10 to 20 gallons of water per acre in a 30 to 36 inch band over the row during the Fall after planting or to the stubble after harvest. Make a second application early in the Spring.</td>
</tr>
</tbody>
</table>

**SPECIAL PRECAUTIONS (Louisiana and Texas only):**
- Do not use treated foliage for feed or forage.
- Use the higher rate on heavy clay soil and soil with a high percentage of organic matter. If necessary, a third application may be made in late Spring at layby. Do not apply within 60 days of harvest.
Ground Application: Metribuzin 75 DF should be mixed by filling the spray tank half full of clean water. Then add the specified amount of Metribuzin 75 DF to suit the total tank capacity and the rate of application per acre (preferably 25 to 35 gallons per acre). Complete filling the tank and maintain sufficient agitation during mixing and spraying to ensure a uniform spray mixture.

Aerial Application: Metribuzin 75 DF may be used in aerial spray equipment as a pre-emergence or postemergence application to irrigated sugarcane. Aerial spray equipment should be calibrated to apply the proper amount of Metribuzin 75 DF in 5 to 10 gallons of spray mixture per acre.

For aerial and chemigation application methods on sugarcane the maximum application rate is 2-2/3 lb Metribuzin 75 DF/acre.

To assure that spray will not adversely affect adjacent sensitive nontarget plants, apply this product by aircraft at a minimum upwind distance of 400 ft from sensitive plants.

Metribuzin 75 DF applied pre-emergence or postemergence to the sugarcane as a broadcast spray or spot treatment will effectively control the following when weeds are less than 3 inches in height.

### Weeds Controlled in Irrigated and Non-irrigated Sugarcane

**Broadleaves**
- Amaranth, Spiny
  - *Amaranthus spinosus*
- Euphorbia, Wild
  - *Euphorbia spp.*
- Spurge, Garden
  - *Euphorbia hirta*
- Spurge, Graceful
  - *Euphorbia glomerifera*

**Grasses**
- Crabgrass
  - *Digitaria spp.*
- Plushgrass
  - *Chinachis radicata*
- Ricegrass
  - *Oryzopsis hymenoides*
- Wiregrass
  - *Eleusine indica*

### Weeds Controlled in Irrigated Sugarcane Only

**Broadleaves**
- Amaranth, Spleen
  - *Amaranthus dubius*
- Hailea Koa
  - *Leucaena leucocephala*

**Grasses**
- Alexandergrass
  - *Brachiaria plantaginea*
- Bridy frosty
  - *Setaria verticillata*

### Weeds Controlled in Non-irrigated Sugarcane Only

**Broadleaves**
- Ageratum
  - *Ageratum conyzoides*
- Richardia
  - *Richardia brasiliensis*
- Tarweed
  - *Cuphea carthagenensis*

### SPECIAL PRECAUTIONS:
Do not use treated foliage for feed or forage.

</tr>
</tbody>
</table>
SWEET CORN

PREPLANT AND PREEMERGENCE APPLICATIONS
(Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, Ohio, South Dakota and Wisconsin)

Metribuzin 75 DF may be used for additional residual weed control of certain broadleaf weed species, when applied in combination with other broadleaf and/or grass herbicides as a tank mixture. All products used must be labeled for use on sweetcorn. The most restrictive restrictions and precautions of all the products used must be observed. Use only labeled rates and methods of applications.

Tank Mixtures: Metribuzin 75 DF can be tank-mixed with the products containing one or more of the following herbicides: 2,4-D, alachlor, atrazine, glyphosate, linuron, metolachlor, metribuzin, paraquat, and pendimethalin.

Weeds Controlled: Refer to the PREPLANT AND PREEMERGENCE APPLICATION – FIELD CORN section of this label for a list of weeds controlled by Metribuzin 75 DF when applied before weed emergence. Use recommended adjuvants when emerged weeds are present. Refer to the BURNDOWN WEED CONTROL – FIELD CORN section for a list of weeds controlled and weed height restrictions.

Sequential Applications: Sequential applications of all herbicides containing metribuzin (the active ingredient in Metribuzin 75 DF) are subject to a limitation of not more than 0.25 pounds a.i. of metribuzin (5-1/3 ounces of Metribuzin 75 DF) per acre of corn per use season. There are no other specific restrictions on sequential applications due to the application of Metribuzin 75 DF.

SPECIAL PRECAUTIONS:
1. Do not apply more than a total of 5-1/3 ounces Metribuzin 75 DF (0.25 pounds metribuzin) per acre per growing season.
2. Do not apply preplant or preemergence on soils having a pH 7.0 or greater.
3. Corn seed should be planted a minimum of 1-1/2 inches deep.
4. Metribuzin 75 DF may only be used in hybrid seed production fields, if both inbred parents are known to be tolerant to Metribuzin 75 DF.
5. Reduced residual weed control may result when used on organic soils. For this reason, residual weed control is not claimed on organic soils.
6. Observe all precautions and limitations on labeling of all products used in tank mixtures.

Feeding restrictions: Grain, forage, and processing waste may be fed to livestock if harvested at least 60 days after the last application of Metribuzin 75 DF.

Sensitive Sweetcorn Hybrids: Make applications only to hybrids that have established tolerance to the application planned.

Application Methods and Timing: Metribuzin 75 DF can be applied preplant surface or preemergence as a broadcast or band application in water, fluid fertilizer, or impregnated on dry fertilizer. Ground or aerial equipment may be used. See DIRECTIONS FOR USE section of this label for directions.

Application Rates: Refer to the DIRECTIONS FOR USE section of this label for definitions of “Soil Texture Group” and other information that applies to all applications. Use the lowest rate of the rate range on soils with the lowest percent clay and organic matter for the group and progressively higher rate for increased clay and organic matter content. The clay content is at least twice as important as organic matter when adjusting rates. Rates will vary based on local conditions.

<table>
<thead>
<tr>
<th>SOIL TEXTURE GROUP</th>
<th>SOIL ORGANIC MATTER CONTENT</th>

</tr>
<tr>
<td>MEDIUM</td>
<td></td>
<td>3.6 to 4.0 oz/A</td>
<td>3.6 to 4.4 oz/A</td>
</tr>
</tbody>
</table>

For early preplant application more than 9 days before planting and fields with at least 30% crop residue on the soil surface at application, the application rate may be increased 1 oz/A, but not to exceed 5-1/3 oz/A.

For band applications use proportional less per planted acre.

See DIRECTIONS FOR USE section of this label.
**TOMATOES**

Apply Metribuzin 75 DF herbicide with ground equipment to seeded and transplanted tomatoes as specified below under “Application Directions.” Aerial application is prohibited. For effective control of grasses and broadleaf weeds with postemergence applications, apply Metribuzin 75 DF before weeds are 1-inch tall. Thorough spray coverage on weed foliage is essential for adequate control with postemergence applications. Do not use air blast or other high pressure spray equipment to make postemergence applications of Metribuzin 75 DF. Refer to the appropriate section of this label for additional information regarding spray equipment, dilution rates, mixing, sprayer cleanup, restrictions, container disposal, and cautions. For specific application information see the “Use Information” section in the front of this label.

Postemergence applications as directed on this label will suppress barnyardgrass and crabgrass when these weeds are less than 1-inch tall.
SPECIAL PRECAUTIONS (Tomatoes):
Do not apply more than a total of 1-1/3 lb Metribuzin 75 DF per crop season.
Do not apply the total amount of 1-1/3 lb Metribuzin 75 DF within a time span of less than 35 days, except in the case of directed sprays.
Allow at least 14 days between applications, regardless of dosage or method of application or severe crop injury may occur.
Do not apply within 7 days of harvest.
Do not apply within 3 days after periods of cool, wet or cloudy weather, or crop injury will occur.
Do not use hot caps on tomatoes within 7 days before or at any time after application of Metribuzin 75 DF.
For transplanted tomatoes, do not apply until transplants have recovered from transplant shock and new growth is evident. Do not apply to tomatoes within 24 hours of application of other pesticides.
Do not tank-mix with other pesticides. (See "Special Precautions" below.)

*Cover crops for soil building or erosion control may be planted any time, but do not graze or harvest for food or feed. Stand reductions may occur in some areas.

* Following peas, lentils or soybeans

* Do not rotate rice after any application to a primary crop greater than 1.0 lb. ai/A of Metribuzin 75 DF per season.

Do not rotate any crop not listed on this label after application of Metribuzin 75 DF to sugarbeets.

* Use the higher rate in fields with a history of severe weed pressure and for maximum residual weed control.

SPECIAL PRECAUTIONS (Tomatoes):
Do not apply more than a total of 1-1/3 lb Metribuzin 75 DF per crop season.
Do not apply the total amount of 1-1/3 lb Metribuzin 75 DF within a time span of less than 35 days, except in the case of directed sprays.
Allow at least 14 days between applications, regardless of dosage or method of application or severe crop injury may occur.
Do not apply within 7 days of harvest.
Do not apply within 3 days after periods of cool, wet or cloudy weather, or crop injury will occur.
Do not use hot caps on tomatoes within 7 days before or at any time after application of Metribuzin 75 DF.
For transplanted tomatoes, do not apply until transplants have recovered from transplant shock and new growth is evident. Do not apply to tomatoes within 24 hours of application of other pesticides.
Do not tank-mix with other pesticides. (See "Special Precautions" below.)

For newly introduced tomato varieties with unknown tolerance to Metribuzin 75 DF, treat only a small area to determine if Metribuzin 75 DF can be used without injury to the crop.

DO NOT USE METRIBUZIN 75 DF ON TOMATOES IN KERN COUNTY, CALIFORNIA.

**BROADCAST APPLICATIONS FOR TOMATOES**

<table>
<thead>
<tr>

<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/3 to 2/3</td>
<td><strong>PREPLANT INCORPORATED - TRANSPLANT TOMATOES ONLY:</strong> Apply specified dosage in 10 or more gallons of water per acre as a broadcast spray to the soil surface immediately before transplanting. Incorporate to a depth of 2 to 4 inches with equipment capable of uniformly mixing the chemical into the soil. This application may be made alone or in a tank-mix combination with trifluralin. When transplanting tomatoes, place the root system of the plants below the herbicide incorporation zone or injury may occur. Refer to the trifluralin label for specific rate of application and for additional precautions and restrictions for tomatoes.</td>
</tr>
<tr>
<td>1/3 to 2/3</td>
<td><strong>POSTEMERGENCE BROADCAST SPRAY - ESTABLISHED TOMATOES:</strong> Apply specified dosage in 20 or more gallons of water per acre as a broadcast spray, or apply in 1/4 to 3/4 inch of water (use 1/4 to 1/2 inch of water on sandy soils) per acre as a continuous injection in center pivot and lateral move systems or apply in the last 15 to 30 minutes of set in permanent solid set sprinkler systems. One or more applications may be applied per use season. Allow at least 14 days between applications or severe crop injury may occur. For transplanted tomatoes, do not apply until transplants have recovered from transplant shock and new growth is evident. Do not apply to tomatoes within 24 hours of application of other pesticides. Do not tank-mix with other pesticides. (See &quot;Special Precautions&quot; below.)</td>
</tr>
<tr>
<td>2/3 to 1-1/3</td>
<td><strong>POSTEMERGENCE DIRECTED SPRAY - ESTABLISHED TOMATOES:</strong> Apply specified dosage in 20 or more gallons of water per acre as a directed spray. One or more applications may be applied per use season. Allow at least 14 days between applications or severe crop injury may occur. Avoid contacting tomato foliage with spray. This method of treatment should be used for use in fields with a history of severe weed pressure or in fields infested with hard-to-control weeds. For transplanted tomatoes, do not apply until transplants have recovered from transplant shock and new growth is evident. Do not apply to tomatoes within 24 hours of application of other pesticides. (See &quot;Special Precautions&quot; below.) When banding see the appropriate section in the front of this label.</td>
</tr>
</tbody>
</table>

* Use the higher rate in fields with a history of severe weed pressure and for maximum residual weed control.
**Crop Tolerance:** Crop tolerance is marginal and crop injury and yield reduction are possible. Make applications when the crop is not under stress to minimize crop injury. Use of adjuvants will reduce crop tolerance. Making the application after three consecutive sunny days will reduce the potential for crop injury.

**Application Restrictions:**
1. Do not apply more than once per year.
2. Do not apply to a crop that is under stress (i.e., severe insect damage, cool to cold temperatures, disease, nutrient deficiency or deficient or excessive moisture).
3. Apply only to Colonial and Creeping Bentgrass.
4. Apply only to established bentgrass that is at least one year old and has been harvested for seed at least once.
5. Do not tank mix with another herbicide, refer to the “USE INFORMATION” section of the Metribuzin 75 DF label booklet and a knowledgeable author or Helena Chemical Company representative.

**Feeding Restrictions:** Do not use the crop or crop residues as feed or livestock bedding for at least 28 days following the last application.

---

### DIRECTIONS FOR USE ON BERMUDAGRASS GROWN FOR SEED AND FOR WEED CONTROL IN ESTABLISHED* PERENNIAL GRASSES GROWN FOR SEED

When used as directed below, Metribuzin 75 DF will control competition from seedlings of annual Bromus species, annual ryegrass, and annual bluegrass. Metribuzin 75 DF will control rattlefescue, henbit, ivyleaf speedwell, chickweed, mustards, and shepherdspurse. The addition of wetting agents containing crop oil may enhance control of the volunteer crop and grassy weeds. When adding wetting agents, follow the directions for use and recommended rates on the wetting agent label.

**Metribuzin 75 DF is compatible with most fertilizers, fungicides, and insecticides. Metribuzin 75 DF may be combined with other herbicides for enhanced weed control. Prior to tank mixing with another herbicide, refer to the “USE INFORMATION” section of the Metribuzin 75 DF label booklet and a knowledgeable authority or Helena Chemical Company representative.**

### PRECAUTIONS AND RESTRICTIONS

Follow all applicable precautions and restrictions on other portions of the label and on the full federal label.

For application ONLY by commercial applicators and only on established bermudagrass turf (such as parks, athletic fields, golf course fairways and cemeteries) which has a mowing height of one-half inch or greater.

Not for use in commercial greenhouses, nurseries, on sod farms, or on grass grown for seed. For use on plants intended for aesthetic purposes or climatic modification and being grown on golf courses or lawns and grounds.

Do not enter or allow others to enter treated area until sprays have dried. Do not apply to dormant turf in the transitional bermudagrass growing zones which are or can be expected to be adversely affected by cold weather stress.
Do not apply using low-pressure and high-volume hand-wand.

Do not apply more than 2 lbs Metribuzin 75 DF (1.5 lbs ai) per acre in a single growing season. Do not apply more than once to dormant turf and twice to actively growing turf in a single growing season.

Avoid spray overlaps that will increase dosages above those specified. Do not apply by air to turf. Only apply to established bermudagrass turf with a mowing height of one-half inch or more. Do not apply to greens, tees, aprons, or other turf which is closely mowed.

Phytotoxicity may occur if applied within the root zone area of ornamentals, shrubs, or trees. Avoid application to these areas.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For best weed control, do not mow treated areas for at least 3 days after treatment. For best results, delay mowing until after rainfall or irrigation is received.

Do not apply by air to turf. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application.

For best weed control, do not mow treated areas for at least 3 days after treatment. For best results, delay mowing until after rainfall or irrigation is received.

Do not use grass clippings for animal feed.

When applying Metribuzin 75 DF to turf which is actively growing, use the lower rate in areas where soil pH is greater than 7.5.

Do not allow sprays to drift onto adjacent desirable plants.

Observe all cautions and limitations on labeling of all products used in mixtures.

**MIXING**

First fill the spray tank 1/4 to 1/3 full with clean water, then add Metribuzin 75 DF at the specified rate. Mix thoroughly and add water to fill the spray tank. Agitation is necessary during mixing and spraying operations to ensure a uniform spray mixture. Ensure that the sprayer is accurately calibrated before applying Metribuzin 75 DF. Avoid boom-overlaps that will increase dosages above those specified. Check the sprayer frequently during application to be sure it is working properly and delivering a uniform spray pattern.

**SPRAYER CLEANUP**

Spray equipment must be thoroughly cleaned to remove remaining traces of herbicide that might injure other crops to be sprayed. Drain any remaining spray solution of Metribuzin 75 DF from the spray tank and dispose of according to label disposal instructions. Rinse the spray tank and refill with water, adding a heavy-duty detergent at the rate of one cup per 20 gallons of water. Recycle this mixture through the equipment for 5 minutes and spray out. Clean pump and nozzle screens thoroughly. Wash away spray mixture from the outside of the spray tank, nozzles or spray rig. All rinse water must be disposed of in compliance with local, state, and Federal guidelines.

**APPLICATION TO ESTABLISHED BERMUDAGRASS**

Having a mowing height of one-half inch or more.

**APPLICATION TO DORMANT TURF**

Apply when weeds are present and actively growing. Apply 2/3 lb Metribuzin 75 DF in 40 gallons water/A as a broadcast spray before green-up of turf. Observe the “Precautions and Restrictions” when using this product.

**BROADLEAF WEEDS (Except California)**

- Alkali mallow (a. sida)
- Bedstraw
- Carolina geranium
- Carpetweed
- Common chickweed
- Common speedwell
- Henbit
- Hop clover
- Spotted bur clover
- White clover
- London rocket
- Nettetal goosfoot
- Parley-oint
- Prostrate knotweed
- Red deadnettle
- Silverseath knotweed
- Shepherdspurse
- Small-flowered buttercup
- Spotted spurge
- Spur weed
- Wild mustard

**BROADLEAF WEEDS (California only)**

- Alkali mallow (a. sida)
- Carpetweed
- Common chickweed
- Common speedwell
- London rocket
- Nettetal goosfoot
- Shepherdspurse
- Wild mustard

**APPLICATION TO ACTIVELY GROWING TURF**

Apply 1/3 to 2/3 lb Metribuzin 75 DF in 40 gallons of water/A as a uniform broadcast spray. Apply only when turf is vigorously growing and not stressed. Repeat if necessary, but do not apply more often than every 7 days. Do not apply more than twice per season to actively growing. Applications may result in temporary discoloration, which turf soon outgrows. Observe the “Precautions and Restrictions” when using this product.

**WEEDS CONTROLLED (Actively Growing Turf)**

- Annual bluegrass (Festuca annua)
- Goosegrass (Except California)
- Littleseed canarygrass
- Rabbitfootgrass
- Barnyardgrass
- Crabgrass
- Dallisgrass
- Nuttlexide
- Sandbur

For control of these weeds, apply Metribuzin 75 DF as directed above and use as a tank mix with MSMA. Consult the MSMA label or contact your local turf extension specialist for additional directions, rates, weed species controlled, and precautions.
IMPORTANT INFORMATION
READ BEFORE USING PRODUCT

CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product reflect the opinion of experts based on field use and tests and must be followed carefully. It is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of Helena Chemical Company or Seller. Handling, storage, and use of the product by Buyer or User are beyond the control of Helena Chemical Company and Seller. All such risks shall be assumed by Buyer and User, and Buyer and User agree to hold Helena Chemical Company and Seller harmless for any claims relating to such factors.

To the extent consistent with applicable law, Helena Chemical Company warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or Helena Chemical Company, and Buyer and User assume the risk of any such use. To the extent consistent with applicable law, HELENA CHEMICAL COMPANY MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

To the extent consistent with applicable law, Helena Chemical Company or Seller shall not be liable for any incidental, consequential or special damages resulting from the use or handling of this product. THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF HELENA CHEMICAL COMPANY AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT SHALL BE, AT THE ELECTION OF HELENA CHEMICAL COMPANY OR SELLER, THE REPLACEMENT OF THE PRODUCT, OR COMPENSATION LIMITED TO DAMAGES NOT EXCEEDING THE FAIR MARKET PURCHASE PRICE, AND SHALL NOT INCLUDE INCIDENTAL OR CONSEQUENTIAL DAMAGES.

Helena Chemical Company and Seller offer this product, and Buyer and User accept it, subject to the foregoing conditions of sale and limitations of warranty and of liability, which may not be modified except by written agreement signed by the duly authorized representative of Helena Chemical Company.

EPA Est. No. 41876-IND-004

**STOP – READ THE LABEL BEFORE USE**

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

See attached booklet for additional Precautionary Statements and complete Directions For Use.

FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure, or accident, call CHEMTREC at 1-800-424-9300.

**NET WEIGHT:** 25 POUNDS

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION.** May be harmful if swallowed or absorbed through skin. Causes moderate eye irritation.

**DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**Pesticide Storage:** Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, or feed. Store in original container and out of the reach of children, preferably in a locked storage area. Handle and open container in a manner as to prevent spillage. If the container is leaking or material spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not walk through spilled material. Dispose of pesticide as directed below. In spill or leak incidents, keep unauthorized people away.

**Pesticide Disposal:** Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**Container Disposal:** Nonrefillable container. Do not reuse or refill this container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**FIRST AID**

<table>
<thead>
<tr>
<th>Swallowed:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Call a poison control center or doctor immediately for treatment advice.</td>
</tr>
<tr>
<td>• Have person sip a glass of water if able to swallow.</td>
</tr>
<tr>
<td>• Do not induce vomiting unless told to do so by a poison control center or doctor.</td>
</tr>
<tr>
<td>• Do not give anything by mouth to an unconscious person.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>on skin or clothing:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Take off contaminated clothing.</td>
</tr>
<tr>
<td>• Rinse skin immediately with plenty of water for 15 to 20 minutes.</td>
</tr>
<tr>
<td>• Call a poison control center or doctor for treatment advice.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>in eyes:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.</td>
</tr>
<tr>
<td>• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.</td>
</tr>
<tr>
<td>• Call a poison control center or doctor for treatment advice.</td>
</tr>
</tbody>
</table>

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. For emergency medical treatment, contact the Rocky Mountain Poison Control Center at 1-866-673-6671.

**Note to Physician:** Treat patient symptomatically.
