FIFRA SECTION 24(c) SPECIAL LOCAL NEED REGISTRATION
FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON

EPTAM® 7E
Selective Herbicide - Emulsifiable Liquid

EPA Reg. No.10163-283, EPA SLN No. OR-180016
FOR CONTROL OF WEEDS IN MEADOWFOAM GROWN FOR SEED

This label is valid until December 31, 2025, unless otherwise amended, withdrawn, canceled, or suspended.

ACTIVE INGREDIENT:
EPTC: S-ethyl dipropylthiocarbamate ............................................................................................................. 87.8%
INERT INGREDIENTS: ................................................................................................................................ 12.2%
Total 100.0%

Contains 7 pounds active ingredient per gallon.
Contains petroleum distillates

KEEP OUT OF REACH OF CHILDREN

WARNING-AVISO
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

ENVIRONMENTAL HAZARDS
This chemical is toxic to mammals. Do not contaminate water when disposing of equipment washwaters or rinsate. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark.

NON-TARGET ORGANISM ADVISORY STATEMENT: This product is toxic to plants and may adversely impact the forage and habitat of non-target organisms, including pollinators, in areas adjacent to the treated site. Protect the forage and habitat of non-target organisms by following label directions intended to minimize spray drift.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR PEST CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

DIRECTIONS FOR USE
• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• Follow all applicable directions, restrictions, and precautions, including statements pertaining to the Worker Protection Standard, on the EPA-registered main label for Eptam 7E, EPA Reg. No. 10163-283, and this Special Local Need (SLN) label.
• This SLN label and the main product label must be in the possession of the user at the time of pesticide application.

Precautions:
• Do not apply if standing water is in the field or if the soil is saturated.
• Do not apply this product through any type of irrigation system.
Special Crop use Restrictions:
The pesticide applicator, the producer of the crop, and the seed conditioner must be aware that use of this product according to this labeling is deemed a non-feed/non-food use by the Oregon Department of Agriculture, and is regulated by the Oregon Administrative Rule (OAR) 603-057-0535, Pesticide Use On Crops Grown For Seed. If the applicator of this pesticide is not the producer, the applicator must provide a copy of this labeling to the producer of the crop. Producers of this crop who use this product, or cause the product to be used on a field they operate, must provide a copy of this pesticide label to the seed conditioner.

This pesticide does not have an established pesticide residue tolerance for this crop. Consequently, no portion of this seed may be used or distributed for food or feed for 1 year (365 days) after the last application of this product. This restriction pertains to, but is not limited to, green chop, forage, hay, pellets, meal, whole seed, cracked seed, straw, roots, bulbs, foliage or seed screenings, and to the grazing of the crop field, stubble or regrowth. All seed screenings shall be disposed of in such a manner that screenings cannot be distributed or used for food or feed purposes, as indicated in OAR 603-057-0535. Additional regulations concerning seed screenings are stated in OAR 603-057-0535.

Any seed from a field treated with this pesticide product shall bear specific and conspicuous container labeling, or if shipped in bulk, on the shipment invoice or bill of lading. The labeling shall contain the following statement:

"This seed was produced using one or more products for which the United States Environmental Protection Agency has not established pesticide residue tolerances. This seed, in whole, as sprouts, or in any form may not be used for human consumption or animal feed. Failure to comply with this condition may violate requirements of the Federal Food and Drug Administration, the Oregon Department of Agriculture and other regulatory agencies."

RE: Amended Special Local Need Registration
Gowan Company / Eptam® 7E Selective Herbicide (a.i. EPTC)
EPA Reg. No. 10163-283, EPA SLN No. OR-180016
Site: Meadowfoam grown for seed

The Oregon Department of Agriculture (ODA) is pleased to enclose amended SLN No. OR-180016, a Special Local Need registration under FIFRA Section 24(c), to allow use of the Gowan Company product Eptam® 7E Selective Herbicide, EPA Reg. No. 10163-283, for control of weeds in meadowfoam grown for seed in Oregon.

Gowan Company had initially requested the registration of Eptam to address the special local need of Oregon meadowfoam growers for a preemergence herbicide that can control annual grass weeds, including annual ryegrass and annual bluegrass, as well as several broadleaf weed species. Gowan Company has now requested that this label be amended to include post-emergence application to established meadowfoam.

Meadowfoam growers do not currently have a residual weed control option for certain grass species post-emergence. Grass weeds can cause economically significant yield reductions in commercial meadowfoam seed production, even to the point of crop failure. They are especially difficult to control when meadowfoam is grown in rotation with grass seed. Amending this SLN to allow post-emergence application to established meadowfoam will address this critical need.

In field studies conducted by Steve Salisbury of Pacific Ag Resources, post-emergent herbicide applications that included Eptam showed the highest average annual ryegrass control, and the lowest average annual ryegrass seed counts in harvested meadowfoam seed, compared to applications that did not include Eptam. Furthermore, the research showed no negative effect of a post-emergence application of Eptam on meadowfoam seed yield and no negative impact on bud and blossom structure and development.
The revisions made to the SLN label were as follows:

- The Environmental Hazards statement was updated to align with the current EPA Stamped/Accepted label.
- The Directions for Use were updated to include post-emergence application to established meadowfoam.
- A general Restrictions section was added to the Directions for Use
- The expiration date was extended to 12/31/2025.

If you have any questions about this SLN, please do not hesitate to contact me. Thank you.

Sincerely,

Matthew T. Bucy
